This form contains the measure information submitted by stewards. Blank fields indicate no information was provided. Attachments also may have been submitted and are provided to reviewers. The sub-criteria and most of the footnotes from the evaluation criteria are provided in Word comments and will appear if your cursor is over the highlighted area (or in the margin if your Word program is set to show revisions in balloons). Hyperlinks to the evaluation criteria and ratings are provided in each section.

**TAP/Workgroup** (if utilized): Complete all yellow highlighted areas of the form. Evaluate the extent to which each sub-criterion is met. Based on your evaluation, summarize the strengths and weaknesses in each section.

Note: If there is no TAP or workgroup, the SC also evaluates the sub-criteria (yellow highlighted areas).

**Steering Committee:** Complete all pink highlighted areas of the form. Review the workgroup/TAP assessment of the sub-criterion, noting any areas of disagreement; then evaluate the extent to which each major criterion is met; and finally, indicate your recommendation for the endorsement. Provide the rationale for your ratings.

Evaluation ratings of the extent to which the criteria are met

| C | Completely (unquestionably demonstrated to meet the criterion) |
| P | Partially (demonstrated to partially meet the criterion) |
| M | Minimally (addressed BUT demonstrated to only minimally meet the criterion) |
| N | Not at all (NOT addressed; OR incorrectly addressed; OR demonstrated to NOT meet the criterion) |
| NA | Not applicable (only an option for a few sub-criteria as indicated) |

### MEASURE DESCRIPTIVE INFORMATION

| De.1 Measure Title: Head CT Scan Results for Acute Ischemic Stroke or Hemorrhagic stroke who Received Head CT Scan Interpretation Within 45 minutes of Arrival. |
| De.2 Brief description of measure: Emergency Department Acute Ischemic Stroke or Hemorrhagic Stroke patients who arrive at the ED within 2 hours of the onset of symptoms who have a head CT scan performed during the stay and having a time from ED arrival to interpretation of the Head CT scan within 45 minutes of arrival. |
| 1.1-2 Type of Measure: process |
| De.3 If included in a composite or paired with another measure, please identify composite or paired measure None |
| De.4 National Priority Partners Priority Area: safety |
| De.5 IOM Quality Domain: timeliness |
| De.6 Consumer Care Need: Getting Better |

### CONDITIONS FOR CONSIDERATION BY NQF

Four conditions must be met before proposed measures may be considered and evaluated for suitability as voluntary consensus standards:

**A.** The measure is in the public domain or an intellectual property (measure steward agreement) is signed.

Public domain only applies to governmental organizations. All non-government organizations must sign a measure steward agreement even if measures are made publicly and freely available.

**A.1** Do you attest that the measure steward holds intellectual property rights to the measure and the right to use aspects of the measure owned by another entity (e.g., risk model, code set)?  
Yes

**A.2** Indicate if Proprietary Measure (as defined in measure steward agreement):

| NQF Staff |
| A | Y |

Rating: C=Completely; P=Partially; M=Minimally; N=Not at all; NA=Not applicable
A.3 Measure Steward Agreement: government entity- public domain- No Agreement
A.4 Measure Steward Agreement attached:
B. The measure owner/steward verifies there is an identified responsible entity and process to maintain and update the measure on a schedule that is commensurate with the rate of clinical innovation, but at least every 3 years. Yes, information provided in contact section
C. The intended use of the measure includes both public reporting and quality improvement.
  ► Purpose: public reporting, quality improvement Payment Incentive, Accountability
D. The requested measure submission information is complete. Generally, measures should be fully developed and tested so that all the evaluation criteria have been addressed and information needed to evaluate the measure is provided. Measures that have not been tested are only potentially eligible for a time-limited endorsement and in that case, measure owners must verify that testing will be completed within 12 months of endorsement.
D.1 Testing: No, testing will be completed within 12 months
D.2 Have NQF-endorsed measures been reviewed to identify if there are similar or related measures? Yes

(for NQF staff use) Have all conditions for consideration been met?
Staff Notes to Steward (if submission returned):
Staff Notes to Reviewers (issues or questions regarding any criteria):
Staff Reviewer Name(s):

1. IMPORTANCE TO MEASURE AND REPORT

- Extent to which the specific measure focus is important to making significant gains in health care quality (safety, timeliness, effectiveness, efficiency, equity, patient-centeredness) and improving health outcomes for a specific high impact aspect of healthcare where there is variation in or overall poor performance.

- Measures must be judged to be important to measure and report in order to be evaluated against the remaining criteria.

1a. High Impact

(for NQF staff use) Specific NPP goal:

1a.1 Demonstrated High Impact Aspect of Healthcare: affects large numbers

1a.2

1a.3 Summary of Evidence of High Impact: Improved access to diagnostic imaging assists clinicians in the decision making process and treatment plans. Over 143,579 people die each year from stroke (Stroke Center, 2009). Stroke is the third leading cause of death in the United States. Each year, about 795,000 people suffer a stroke. About 600,000 of these are first attacks, and 185,000 are recurrent attacks (AHA, 2009). Decreasing radiology turnaround times will enhance decision making capabilities for patients with TIA or Acute Ischemic Stroke. The Food and Drug Administration (FDA) approved the use of tissue plasminogen activator (t-PA) for treatment of acute ischemic stroke when given within three hours of stroke symptom onset (NSA, 2000). Of all strokes, 87 percent are ischemic, 10 percent are intracerebral hemorrhage, and 3 percent are subarachnoid hemorrhage (NINDS, 2004). Because of the therapeutic time window for treatment possibilities, timely completion and results of the CT scan are imperative and will directly impact the quality of care a patient receives.

- Improved access to diagnostics assists clinicians in decision making. Diagnostic imaging and laboratory reports are expected to increase length of stay in the emergency department. Radiology report turnaround time can impact patient throughput times in the emergency department (Delfino, 2008). Decreasing radiology report turnaround times can have impacts across the facility and assist in reducing the length of

Rating: C=Completely; P=Partially; M=Minimally; N=Not at all; NA=Not applicable
stay and enhancing decision making capabilities for patient treatment plans (Marquez, 2005). Efficiencies in throughput with tasks can lead to less diversion, less overcrowding, less elopements, and less financial loss (Falvo, 2007).

1a.4 Citations for Evidence of High Impact:

1b. Opportunity for Improvement

1b.1 Benefits (improvements in quality) envisioned by use of this measure:
Delays in obtaining test results affect emergency department overcrowding (GAO, 2003). Reducing radiology turnaround time has been shown to assist in improving cycle times and timely completion of tasks, allowing potentially decreased patient wait times (Espinosa 1999 and X 1998). Improving efficiency in completion of tests promotes patient throughput.

1b.2 Summary of data demonstrating performance gap (variation or overall poor performance) across providers:
A 2005 survey conducted by the Centers for Disease Control found that during 2003, an estimated 113.9 million visits were made to hospital EDs (about 38.9 visits per 100 persons). From 1993 to 2003, increasing trends in ED utilization rates were observed for people aged 22-49 years, 50-64 years, and 65 and over. More than 16 million patients arrived by ambulance (14.2%). In approximately 3% of visits, the patient had been seen in the ED within the past 72 hours. In 2003, abdominal pain, chest pain, fever, and cough were the leading patient complaints, accounting for nearly one-fifth of all visits. Acute upper respiratory infection was the leading illness-related diagnosis at ED visits. There were an estimated 40.2 million injury-related visits during 2003, or 14.1 visits per 100 persons. Diagnostic and screening services, procedures, and medications were provided at 89.7%, 45.4%, and 77.3% of visits, respectively. In 2003, approximately 14% of ED visits resulted in hospital admission. On average, patients spent 3.2 hours in the ED, of which 46.5 minutes were spent waiting to see a physician.

A separate medical news article states that in 2008, the average time spent in the emergency department, including wait time and time spent with a doctor, was 243 minutes. This figure was down slightly from 245 the year before, but up from 216 in 2002.

1b.3 Citations for data on performance gap:

1b.4 Summary of Data on disparities by population group: N/A

1b.5 Citations for data on disparities: N/A

1c. Outcome or Evidence to Support Measure Focus

1c.1 Relationship to Outcomes (For non-outcome measures, briefly describe the relationship to desired outcome. For outcomes, describe why it is relevant to the target population): Delays in obtaining test results affect emergency department overcrowding (GAO, 2003). Reducing radiology turnaround time has been shown to assist in improving cycle times and timely completion of tasks allows for potentially decreased patient wait times (Espinosa 1999). Improving efficiency in completion of tests promotes patient throughput.

1c.2 Type of Evidence: observational study

1c.4 Summary of Evidence (as described in the criteria; for outcomes, summarize any evidence that healthcare services/care processes influence the outcome): Improved access to diagnostics assists clinicians in decision-making. Diagnostic imaging and laboratory reports are expected to increase length of stay in the emergency department. Radiology report turnaround time can affect patient throughput times in the emergency department (Delfino, 2008). Decreasing radiology report turnaround times can have effects across the facility and assist in reducing the length of stay and enhancing decisionmaking capabilities for patient treatment plans (Marquez, 2005). Efficiencies in throughput with tasks can lead to less diversion, less overcrowding, fewer elopements, and less financial loss (Falvo, 2007).

1c.5 Rating of strength/quality of evidence (also provide narrative description of the rating and by whom): Studies regarding radiology turnaround time are primarily level B and level C.

1c.6 Method for rating evidence: ABC Scale

• Level A (randomized controlled trial/ meta-analysis): High quality randomized controlled trial that considers all important outcomes. High-quality meta-analysis (quantitative systematic review) using comprehensive search strategies.

• Level B (other evidence): A well-designed, nonrandomized clinical trial. A nonquantitative systematic review with appropriate search strategies and well-substantiated conclusions. Includes lower quality randomized controlled trials, clinical cohort studies, and case-controlled studies with nonbiased selection of study participants and consistent findings. Other evidence, such as high-quality, historical, uncontrolled studies, or well-designed epidemiologic studies with compelling findings, is also included.

• Level C (consensus/expert opinion): Consensus viewpoint or expert opinion. Expert opinion is sometimes the best evidence available.

1c.7 Summary of Controversy/Contradictory Evidence: The risk in advancing measures that address timeliness is that there may be a decrease in testing performance to avoid measurement. However, this

Comment [k4]: 1c. The measure focus is:

• an outcome (e.g., morbidity, mortality, function, health-related quality of life) that is relevant to, or associated with, a national health goal/priority, the condition, population, and/or care being addressed;

• if an intermediate outcome, process, structure, etc., there is evidence that supports the specific measure focus as follows: intermediate outcome - evidence that the measured intermediate outcome (e.g., blood pressure) leads to improved health/avoidance of harm or cost/benefit.

• Process - evidence that the measured clinical or administrative process leads to improved health/avoidance of harm and if the measure focus is on one step in a multi-step care process, it measures the step that has the greatest effect on improving the specified desired outcome(s).

• Access - evidence that the measured structure supports the consistent delivery of effective processes or access that lead to improved health/avoidance of harm or cost/benefit.

• Patient experience - evidence that an association exists between the measure of patient experience of health care and the outcomes, values and preferences of individual patients.

Comment [k5]: 4 Clinical care processes typically include multiple steps: assess → identify problem/potential problem → choose/plan intervention (with patient input) → provide intervention → evaluate impact on health status. If the measure focus is one step in such a multi-step process, the step with the greatest effect on the desired outcome should be selected as the focus of measurement. For example, although assessment of immunization status and recommending immunization are necessary steps, they are not sufficient to achieve the desired impact on health status – patients must be vaccinated to achieve immunity. This does not preclude consideration of measures of preventive screening interventions where there is a strong link with desired outcomes (e.g., mammography) or measures for multiple care processes that affect a single outcome.

Comment [k6]: 3 The strength of the body of evidence for the specific measure focus should be systematically assessed and rated (e.g., USPSTF grading system http://www.ahrq.gov/clinic/uspstf07/methods/benefit.htm). If the USPSTF grading system was not used, the grading system is explained including how it relates to the USPSTF grades or why it does not. However, evidence is not limited to quantitative studies and the best type of evidence depends upon the question being studied (e.g., randomized controlled trials appropriate for studying drug efficacy are not well suited for complex system changes). When qualitative studies are used, appropriate qualitative research criteria are used to judge the strength of the evidence.

---

**2. SCIENTIFIC ACCEPTABILITY OF MEASURE PROPERTIES**

**Extent to which the measure, as specified, produces consistent (reliable) and credible (valid) results about the quality of care when implemented. (evaluation criteria)**

**2a. MEASURE SPECIFICATIONS**

**S.1 Do you have a web page where current detailed measure specifications can be obtained?**

- Yes

**S.2 If yes, provide web page URL:**

**2a. Precisely Specified**

**2a.1 Numerator Statement (Brief, text description of the numerator - what is being measured about the target population, e.g. target condition, event, or outcome):**

Emergency Department Acute Ischemic Stroke or Hemorrhagic Stroke patients arriving at the ED within 2 hours of the time last known well, with an order for a head CT scan whose time from ED arrival to interpretation of the Head CT scan is within 45 minutes of arrival.

**2a.2 Numerator Time Window (The time period in which cases are eligible for inclusion in the numerator):**

45 minutes from time of arrival

Rating: C=Completely; P=Partially; M=Minimally; N=Not at all; NA=Not applicable
### 2a.3 Numerator Details *(All information required to collect/calculate the numerator, including all codes, logic, and definitions):*

**Included Populations:** Not Applicable

**Excluded Populations:** None

**Data Elements:**
- Arrival Time
- Head CT Scan Interpretation Date and Time
- Outpatient Encounter Date

### 2a.4 Denominator Statement *(Brief, text description of the denominator - target population being measured):*

Emergency Department Acute Ischemic Stroke or Hemorrhagic Stroke patients arriving at the ED within 2 hours of the time last known well with an order for a head CT scan.

### 2a.5 Target population gender: Female, Male

### 2a.6 Target population age range: Patients 18 years and older

### 2a.7 Denominator Time Window *(The time period in which cases are eligible for inclusion in the denominator):*

### 2a.8 Denominator Details *(All information required to collect/calculate the denominator - the target population being measured - including all codes, logic, and definitions):*

**Included Populations:**
- Patients with an ICD-9-CM Principal Diagnosis Code for acute ischemic stroke, or hemorrhagic stroke as defined in Appendix A, OP table 10.0; and
- Patients who had a Head CT Scan Order as defined in the Data Dictionary; and
- An E/M Code for emergency department encounter as defined in Appendix A, OP Table 1.1

### 2a.9 Denominator Exclusions *(Brief text description of exclusions from the target population):*

- Patients less than 18 years of age
- Patients who expired in the emergency department
- Patients who left the emergency department against medical advice or discontinued care

### 2a.10 Denominator Exclusion Details *(All information required to collect exclusions to the denominator, including all codes, logic, and definitions):*

- Birthdate
- Date Last Known Well
- Discharge Status
- E/M Code
- Head CT Scan Order
- Head CT Scan Interpretation Date and Time
- ICD-9-CM Principal Diagnosis Code
- Last Known Well
- Outpatient Encounter Date
- Time Last Known Well

### 2a.11 Stratification Details/Variables *(All information required to stratify the measure including the stratification variables, all codes, logic, and definitions):*

Plan is to stratify measure by ED annual volume and the presence of race/ethnicity, age and gender demographics will allow for stratification of results.

**Comment [k9]:** 11 Risk factors that influence outcomes should not be specified as exclusions.

12 Patient preference is not a clinical exception to eligibility and can be influenced by provider interventions.
### 2a.12-13 Risk Adjustment Type:
- **no risk adjustment necessary**

### 2a.14 Risk Adjustment Methodology/Variables
**List risk adjustment variables and describe conceptual models, statistical models, or other aspects of model or method:**
N/A

### 2a.15-17 Detailed risk model available Web page URL or attachment:

| 2a.18-19 | Type of Score: rate/proportion |
| 2a.20 | Interpretation of Score: better quality = higher score |
| 2a.21 | Calculation Algorithm: *Describe the calculation of the measure as a flowchart or series of steps.*
- Calculation algorithm can be found in the document uploaded for question 2a.29, Data Dictionary or Code Table; please refer to pages 4-5 of the attached document. |

### 2a.22 Describe the method for discriminating performance (e.g., significance testing):

### 2a.23 Sampling (Survey) Methodology
**If measure is based on a sample (or survey), provide instructions for obtaining the sample, conducting the survey and guidance on minimum sample size (response rate):**
- If a measure is based on a sample (or survey), provide instructions for obtaining the sample and conducting the survey, and lend guidance on minimum sample size (response rate).

Sampling
Sampling is a process of selecting a representative part of a population in order to estimate the hospital’s performance, without collecting data for the hospital’s entire population. Using a statistically valid sample, a hospital can measure its performance in an effective and efficient manner. Sampling is a particularly useful technique for performance measures that require primary data collection from a source such as the medical record. Sampling should not be used unless the hospital has a large number of cases in the outpatient population because a fairly large number of sample cases are needed to achieve a representative sample of the population. For the purpose of sampling outpatient department quality measures, the terms “sample,” “effective sample,” and “case” are defined below:

- **The sample** is the fraction of the population that is selected for further study.
- **Effective sample** refers to the part of the sample that makes it into the denominator of an outpatient measure set. This term is defined as the sample for an outpatient measure set minus all the exclusions and contraindications for the outpatient measure set in the sample.
- **A case** refers to a single record (or an encounter) within the population. For example, during the first quarter a hospital may have 100 patients who had a principal diagnosis associated with the OP-1, 2, 3, 4, and 5 measures. The hospital’s outpatient population would include 100 cases or 100 outpatient records for these measures during the first quarter.

To obtain statistically valid sample data, the sample size should be carefully determined and the sample should be randomly selected in such a way that the individual cases in the population have an equal chance of being selected. Only when the sample data truly represent the whole population can the sample-based performance outpatient measure set data be meaningful and useful. Each hospital is ultimately responsible for adhering to the sampling requirements outlined in this manual.

As a general rule/policy of CMS, providers are encouraged to submit as many cases as possible up to the entire population of cases if reasonably feasible. For example, if the raw data can be easily extracted from an existing electronic database or the abstraction burden is manageable, providers should consider submitting the entire population of cases that meet the initial selection criteria. Otherwise, a statistically valid sample can be selected.

**Note:** Hospitals are NOT required to sample their data if they elect to include all eligible cases. For example, a hospital has 100 cases for the quarter and must select a sample of 80 cases. The hospital may choose to use all 100 cases given the minimal benefit sampling would offer.
### 2a.24 Data Source (Check the source(s) for which the measure is specified and tested)
Electronic administrative data/claims, Electronic clinical data, electronic Health/Medical Record, paper medical record/flowsheet, lab data

### 2a.25 Data source/data collection instrument (Identify the specific data source/data collection instrument, e.g. name of database, clinical registry, collection instrument, etc.): The CMS Abstraction & Reporting Tool or Electronic Health Record

### 2a.26-28 Data source/data collection instrument reference web page URL or attachment:

### 2a.29-31 Data dictionary/code table web page URL or attachment: Attachment Head CT MIF 2010 05 13.pdf

### 2a.32-35 Level of Measurement/Analysis (Check the level(s) for which the measure is specified and tested)
Facility/Agency

### 2a.36-37 Care Settings (Check the setting(s) for which the measure is specified and tested)
Ambulatory Care: Emergency Dept, Ambulatory Care: Hospital Outpatient

### 2a.38-41 Clinical Services (Healthcare services being measured, check all that apply)

---

#### Comment [KP10]: 2b. Reliability testing demonstrates the measure results are repeatable, producing the same results a high proportion of the time when assessed in the same population in the same time period.

#### Comment [KP11]: 8 Examples of reliability testing include, but are not limited to: inter-rater/abstractor or intra-rater/abstractor studies; internal consistency for multi-item scales; test-retest for survey items. Reliability testing may address the data items or final measure score.

#### Comment [KP12]: 2c. Validity testing demonstrates that the measure reflects the quality of care provided, adequately distinguishing good and poor quality. If face validity is the only validity addressed, it is systematically assessed.

#### Comment [KP13]: 9 Examples of validity testing include, but are not limited to: determining if measure scores adequately distinguish between providers known to have good or poor quality assessed by another valid method; correlation of measure scores with another valid indicator of quality for the specific topic; ability of measure scores to predict scores on some other related valid measure; content validity for multi-item scales/tests. Face validity is a subjective assessment by experts of whether the measure reflects the quality of care (e.g., whether the proportion of patients with BP < 140/90 is a marker of quality). If face validity is the only validity addressed, it is systematically assessed (e.g., ratings by relevant stakeholders) and the measure is judged to represent quality care for the specific topic and that the measure focus is the most important aspect of quality for the specific topic.

#### Comment [KP14]: 2d. Clinically necessary measure exclusions are identified and must be:
- supported by evidence of sufficient frequency of occurrence so that results are distorted without the exclusion;
- AND
- a clinically appropriate exception (e.g., contraindication) to eligibility for the measure focus;
- AND
- precisely defined and specified:
  - if there is substantial variability in exclusions across providers, the measure is specified so that exclusions are computable and the effect on the measure is transparent (i.e., impact clearly delineated, such as number of cases excluded, exclusion rates by type of exclusion);
  - if patient preference (e.g., informed decision-making) is a basis for exclusion, there must be evidence that it strongly impacts performance on the measure and the measure must be specified so that the information about patient preference and the effect on the measure is transparent (e.g., numerator category).

#### Comment [KL15]: 10 Examples of evidence that an exclusion distorts measure results include, but are not limited to: frequency of occurrence, sensitivity analyses with and without the exclusion, and variability of exclusions across providers.

**Comment [KP27]:** 4a. For clinical measures, required data elements are routinely generated concurrent with and as a byproduct of care processes during care delivery. (e.g., BP recorded in the electronic record, not abstracted from the record later by other personnel; patient self-assessment tools, e.g., depression scale; lab values, meds, etc.)

### 4b. Electronic Sources

<table>
<thead>
<tr>
<th>Rating</th>
<th>4b</th>
<th>C</th>
<th>P</th>
<th>M</th>
<th>N</th>
</tr>
</thead>
</table>

**Comment [KP28]:** 4b. The required data elements are available in electronic sources. If the required data are not in existing electronic sources, a credible, near-term path to electronic collection by most providers is specified and clinical data elements are specified for transition to the electronic health record.

**Comment [KP29]:** 4c. Exclusions should not require additional data sources beyond what is required for the numerator and denominator specifications unless justified as supporting measure validity.

**Comment [KP30]:** 4d. Susceptibility to inaccuracies, errors, or unintended consequences and the ability to audit the data items to detect such problems are identified.

**Comment [KP31]:** 4e. Demonstration that the data collection strategy (e.g., source, timing, frequency, sampling, patient confidentiality, etc.) can be implemented (e.g., already in operational use, or testing demonstrates that it is ready to put into operational use).

### TAP/Workgroup: What are the strengths and weaknesses in relation to the sub-criteria for Feasibility?
Steering Committee: Overall, to what extent was the criterion, Feasibility, met?

1c. The measure focus is:

- an outcome (e.g., morbidity, mortality, function, health-related quality of life) that is relevant to, or associated with, a national health goal/priority, the condition, population, and/or care being addressed; OR
- if an intermediate outcome, process, structure, etc., there is evidence that supports the specific measure focus as follows:
  - Intermediate outcome - evidence that the measured intermediate outcome (e.g., blood pressure, Hba1c) leads to improved health/avoidance of harm or cost/benefit.
  - Process - evidence that the measured clinical or administrative process leads to improved health/avoidance of harm and
    if the measure focus is on one step in a multi-step care process, it measures the step that has the greatest effect on improving the specified desired outcome(s).
  - Structure - evidence that the measured structure supports the consistent delivery of effective processes or access that lead to improved health/avoidance of harm or cost/benefit.
  - Patient experience - evidence that an association exists between the measure of patient experience of health care and the outcomes, values and preferences of individuals/ the public.
  - Access - evidence that an association exists between access to a health service and the outcomes of, or experience with, care.
  - Efficiency - demonstration of an association between the measured resource use and level of performance with respect to one or more of the other five IOM aims of quality.

2d. Clinically necessary measure exclusions are identified and must be:

- supported by evidence of sufficient frequency of occurrence so that results are distorted without the exclusion; AND
- a clinically appropriate exception (e.g., contraindication) to eligibility for the measure focus; AND
- precisely defined and specified:
  - if there is substantial variability in exclusions across providers, the measure is specified so that exclusions are computable and the effect on the measure is transparent (i.e., impact clearly delineated, such as number of cases excluded, exclusion rates by type of exclusion);
  - if patient preference (e.g., informed decision-making) is a basis for exclusion, there must be evidence that it strongly impacts performance on the measure and the measure must be specified so that the information about patient preference and the effect on the measure is transparent (e.g., numerator category computed separately, denominator exclusion category computed separately).
Measure Information Form

Measure Set: Emergency Department

Set Measure ID #: ED

Performance Measure Name: Head CT Scan Results for Acute Ischemic Stroke or Hemorrhagic Stroke patients who Received Head CT or MRI Scan Interpretation Within 45 minutes of ED Arrival.

Description: Emergency Department Acute Ischemic Stroke or Hemorrhagic Stroke patients who arrive at the ED within 2 hours of the onset of symptoms who have a head CT or MRI scan performed during the stay and having a time from ED arrival to interpretation of the Head CT or MRI scan within 45 minutes of arrival.

Rationale: Improved access to diagnostic imaging assists clinicians in the decision making process and treatment plans. Over 143,579 people die each year from stroke (Stroke Center, 2009). Stroke is the third leading cause of death in the United States. Each year, about 795,000 people suffer a stroke. About 600,000 of these are first attacks, and 185,000 are recurrent attacks (AHA, 2009). Decreasing radiology turnaround times will enhance decision making capabilities for patients with TIA or Acute Ischemic Stroke. The Food and Drug Administration (FDA) approved the use of tissue plasminogen activator (t-PA) for treatment of acute ischemic stroke when given within three hours of stroke symptom onset (NSA, 2000). Of all strokes, 87 percent are ischemic, 10 percent are intracerebral hemorrhage, and 3 percent are subarachnoid hemorrhage (NINDS, 2004). Because of the therapeutic time window for treatment possibilities, timely completion and results of the CT or MRI scan are imperative and will directly impact the quality of care a patient receives.

Improved access to diagnostics assists clinicians in decision making. Diagnostic imaging and laboratory reports are expected to increase length of stay in the emergency department. Radiology report turnaround time can impact patient throughput times in the emergency department (Delfino, 2008). Decreasing radiology report turnaround times can have impacts across the facility and assist in reducing the length of stay and enhancing decision making capabilities for patient treatment plans (Marquez, 2005). Efficiencies in throughput with tasks can lead to less diversion, less overcrowding, less elopements, and less financial loss (Falvo, 2007).

Type of Measure: Process

Improvement Noted As: An increase in the rate
Numerator Statement: Emergency Department Acute Ischemic Stroke or Hemorrhagic Stroke patients arriving at the ED within 2 hours of the time last known well, with an order for a head CT or MRI scan whose time from ED arrival to interpretation of the Head CT scan is within 45 minutes of arrival

Included Populations: Not Applicable

Excluded Populations: None

Data Elements:
- Arrival Time
- Head CT or MRI Scan Interpretation Date and Time
- Outpatient Encounter Date

Denominator Statement: Emergency Department Acute Ischemic Stroke or Hemorrhagic Stroke patients arriving at the ED within 2 hours of the time last known well with an order for a head CT or MRI scan.

Included Populations:
- Patients with an ICD-9-CM Principal Diagnosis Code for acute ischemic stroke, or hemorrhagic stroke as defined in Appendix A, OP table 10.0; and
- Patients who had a Head CT or MRI Scan Order as defined in the Data Dictionary; and
- An E/M Code for emergency department encounter as defined in Appendix A, OP Table 1.1

Excluded Populations:
- Patients less than 18 years of age
- Patients who expired in the emergency department
- Patients who left the emergency department against medical advice or discontinued care

Data Elements:
- Birthdate
- Date Last Known Well
- Discharge Status
- E/M Code
- Head CT or MRI Scan Order
- Head CT or MRI Scan Interpretation Date and Time
- ICD-9-CM Principal Diagnosis Code
- Last Known Well
- Outpatient Encounter Date
- Time Last Known Well
Risk Adjustment: No

Data Collection Approach: Retrospective data sources for required data elements include administrative data and medical records. Some facilities may prefer to gather data concurrently by identifying patients in the population of interest. This approach provides opportunity for improvement at the point of care/service.

Data Accuracy: N/A

Measure Analysis Suggestions: None

Sampling: Yes, for additional information see the Population and Sampling Specifications section.

Data Reported As: Aggregate measure of central tendency

Measure Information Form

Measure Set: Emergency Department

Set Measure ID #: OP-ED-3

Performance Measure Name: Median Time from Head CT Scan Order to Head CT Scan Interpretation

Description: Median time from initial Head CT Scan Order to time Head CT Scan results are reported to emergency department staff.

Rationale: Improved access to diagnostics assists clinicians in decision making. Diagnostic imaging and laboratory reports are expected to increase length of stay in the emergency department. Radiology report turnaround time can impact patient throughput times in the emergency department (DeFlorio, 2008). Decreasing radiology report turnaround times can have impacts across the facility and assist in reducing the length of stay and enhancing decision making capabilities for patient treatment plans (Marquez, 2005). Efficiencies in throughput with tasks can lead to less diversion, less overcrowding, less elopements, and less financial loss (Falvo, 2007).

Type of Measure: Process

Improvement Noted As: A decrease in the median value

Continuous Variable Statement: Time (in minutes) from initial Head CT Scan Order to time Head CT Scan results are reported to emergency department staff.

Included Populations:
- Patients with a patient age on Outpatient Encounter Date (Outpatient Encounter Date – Birthdate) >= 18 years, and
- Patients who had a Head CT Scan Order as defined in the Data Dictionary, and
- An E/M Code for emergency department encounter as defined in Appendix A, OP Table 1.0

Excluded Populations:
- Patients less than 18 years of age
- Patients who expired in the emergency department
- Patients who left the emergency department against medical advice or discontinued care

Data Elements:
- Birthdate
• Discharge Status
• E/M Code
• Head CT Scan Order
• Head CT Scan Order Date and Time
• Head CT Scan Interpretation Date and Time
• Outpatient Encounter Date

Risk Adjustment: No

Data Collection Approach: Retrospective data sources for required data elements include administrative data and medical records. Some facilities may prefer to gather data concurrently by identifying patients in the population of interest. This approach provides opportunity for improvement at the point of care/service.

Data Accuracy:

Measure Analysis Suggestions: None

Sampling: Yes, for additional information see the Population and Sampling Specifications section.

Data Reported As: Aggregate measure of central tendency

Data Elements

Data Element Name: Arrival Time

Collected For: All Records (used in algorithm for OP-1, OP-2, OP-3, OP-5)

Definition: The earliest documented time (military time) the patient arrived at the outpatient or emergency department.

Suggested Data Collection Question: What was the earliest documented time the patient arrived at the outpatient or emergency department?

Format:
- Length: 5 - HH:MM (with or without colon) or UTD
- Type: Time
- Occurs: 1

Allowable Values: Enter the earliest documented time of arrival

- HH = Hour (00-23)
- MM = Minutes (00-59)
- UTD = Unable to Determine

Time must be recorded in military time format. With the exception of Midnight and Noon:
- If the time is in the a.m., conversion is not required.
- If the time is in the p.m., add 12 to the clock time hour.

Examples:
- Midnight - 00:00
- Noon - 12:00
- 5:31 am - 05:31
- 5:31 pm - 17:31
- 11:59 am - 11:59
- 11:59 pm - 23:59

Note:
00:00 = midnight. If the time is documented as 00:00 11-24-20XX, review supporting documentation to determine if the Outpatient Encounter Date should remain 11-24-20XX or if it should be converted to 11-25-20XX.

When converting Midnight or 24:00 to 00:00 do not forget to change the Outpatient Encounter Date.
Example: Midnight or 24:00 on 11-24-20XX = 00:00 on
For times that include “seconds,” remove the seconds and record the military time.
Example: 15:00:35 would be recorded as 15:00
Note:
Transmission of a case with an invalid time will be rejected from the OPPS Clinical Warehouse. Use of “UTD” for Arrival Time allows the case to be accepted into the warehouse, but should only be used when all efforts to locate or determine an Arrival Time have been exhausted.

Notes for Abstraction:

- If the time of the outpatient or emergency department arrival is unable to be determined from medical record documentation, enter UTD.
- The medical record must be abstracted as documented (taken at “face value”). When the time documented is obviously in error (not a valid time) and no other documentation is found that provides this information, the abstracter should select “UTD.”
  
  Example:
  o Documentation indicates that the arrival time was 3300. No other documentation in the medical record provides a valid time. Since the arrival time is outside of the range listed in the Allowable Values for “Hour,” it is not a valid time and the abstracter should select “UTD.”
- When reviewing records for arrival time do NOT include any documentation from external sources (e.g., ambulance records, physician/advanced practice nurse/physician assistant [physician/APN/PA] office record, laboratory reports, or ECGs) obtained prior to arrival. The intent is to utilize any documentation which reflects processes that occurred after arrival.

NOTE: Medical record documentation should be carefully examined in determining the most correct time of the outpatient or emergency department arrival. The arrival time should NOT be abstracted simply as the earliest time in the acceptable sources, without regard to other (i.e., ancillary services) substantiating documentation. If documentation suggests that the earliest time in the acceptable sources does not reflect the time the patient arrived at the outpatient or emergency department, this time should not be used.

Suggested Data Sources:

- Emergency Department record
- Outpatient record
### Guidelines for Abstraction:

<table>
<thead>
<tr>
<th>Inclusion</th>
<th>Exclusion</th>
</tr>
</thead>
<tbody>
<tr>
<td>None</td>
<td>None</td>
</tr>
</tbody>
</table>
Data Element Name: Birthdate

Collected For: All Records

Definition: The month, day, and year the patient was born.

NOTE: Patient Age on Outpatient Encounter Date (in years) is calculated by Outpatient Encounter Date minus Birthdate. The algorithm to calculate age must use the month and day portion of encounter date and birthdate to yield the most accurate age.

Suggested Data Collection Question: What is the patient’s date of birth?

Format: Length: 10 – MM-DD-YYYY (includes dashes)
Type: Date
Occurs: 1

Allowable Values: MM = Month (01-12)
DD = Day (01-31)
YYYY = Year (1880-Current Year)

Notes for Abstraction: Because this data element is critical in determining the population for all measures, the abstractor should NOT assume that the claim information for the birthdate is correct. If the abstractor determines through chart review that the date is incorrect, correct and override the downloaded value. If the abstractor is unable to determine the correct birthdate through chart review, default to the date of birth on the claim information.

Suggested Data Sources: • Outpatient record
• Emergency Department record

Guidelines for Abstraction:

<table>
<thead>
<tr>
<th>Inclusion</th>
<th>Exclusion</th>
</tr>
</thead>
<tbody>
<tr>
<td>None</td>
<td>None</td>
</tr>
</tbody>
</table>
DATA ELEMENT NAME: BMP Order

COLLECTED FOR: ED

DEFINITION: Documentation in the medical record a Basic Metabolic Panel (BMP) or Electrolyte panel was ordered during emergency department visit.

SUGGESTED DATA COLLECTION QUESTION: Was a BMP or electrolyte panel ordered by the physician/APN/PA during the emergency department visit?

FORMAT: Length: 1
Type: Alphanumeric
Occurs: 1

ALLOWABLE VALUES: Y (Yes) There is documentation the physician/APN/PA ordered a BMP or electrolyte panel during the emergency department visit.

N (No) There is no documentation the physician/APN/PA ordered a BMP or electrolyte panel during the emergency department visit or unable to determine (UTD).

NOTES FOR ABSTRACTION: If there is documentation a BMP or electrolyte panel was ordered and then the test was cancelled by the physician/APN/PA, select NO.

DATA SOURCES: Nurses Notes
Physician Notes/Orders
Radiology Notes

Guidelines for Abstraction:

<table>
<thead>
<tr>
<th>Inclusion</th>
<th>Exclusion</th>
</tr>
</thead>
<tbody>
<tr>
<td>None</td>
<td>None</td>
</tr>
</tbody>
</table>
**Data Element Name:** BMP Order Date and Time

**Collected For:** ED

**Definition:** The month, day, year and the exact time (military time) represented in hours and minutes at which the earliest BMP or electrolyte panel was ordered.

**Suggested Data Collection Question:** What is the date and time of the earliest BMP or electrolyte panel order?

**Format:**
- **Length:** 16 – MM-DD-YYYY (includes dashes) and HH:MM (with or without colon) or UTD
- **Type:** Date/Time
- **Occurs:** 1

**Allowable Values:**
- MM = Month (01-12)
- DD = Day (01-31)
- YYYY = Year (2000-Current Year)
- HH = Hour (00-23)
- MM = Minutes (00-59)
- UTD = Unable to Determine

Time must be recorded in military time format. With the exception of Midnight and Noon:
- If the time is in the a.m., conversion is not required.
- If the time is in the p.m., add 12 to the clock time hour.

**Examples:**
Midnight - 00:00  Noon - 12:00
5:31 am - 05:31  5:31 pm - 17:31
11:59 am - 11:59  11:59 pm - 23:59

**Note:**
00:00 = midnight. If the time is documented as 00:00 11-24-20XX, review supporting documentation to determine if the Discharge Date should remain 11-24-20XX or if it should be converted to 11-25-20XX.

When converting Midnight or 24:00 to 00:00 do not forget to
change the Discharge Date.
Example: Midnight or 24:00 on 11-24-20XX = 00:00 on 11-25-20XX

**Note:**
Transmission of a case with an invalid date will be rejected from the OPPS Clinical Warehouse. Use of “UTD” for *BMP Order Date and Time* allows the case to be accepted into the warehouse.

**Notes for Abstraction:**
For times that include “seconds”, remove the seconds and record the military time
Example: 
15:00:35 would be recorded as 15:00

If the date and/or time of the BMP or electrolyte panel order is unable to be determined from medical record documentation, abstract UTD.

Abstract the order of the earliest BMP or electrolyte panel ordered (closest to arrival).

If there are multiple order times documented for the same BMP or electrolyte panel order, use the earliest order time.

**Suggested Data Sources:**
- Emergency Department record

**Guidelines for Abstraction:**

<table>
<thead>
<tr>
<th>Inclusion</th>
<th>Exclusion</th>
</tr>
</thead>
<tbody>
<tr>
<td>None</td>
<td>None</td>
</tr>
</tbody>
</table>
Data Element Name: BMP Results Date and Time

Collected For: ED

Definition: The month, day, year and the exact time (military time) represented in hours and minutes at which the earliest BMP or electrolyte panel results were reported.

Suggested Data Collection Question: What is the date and time of the earliest BMP or electrolyte panel results?

Format: Length: 16 – MM-DD-YYYY (includes dashes) and HH:MM (with or without colon) or UTD

Type: Date/Time

Occurs: 1

Allowable Values:

- MM = Month (01-12)
- DD = Day (01-31)
- YYYY = Year (2000-Current Year)
- HH = Hour (00-23)
- MM = Minutes (00-59)
- UTD = Unable to Determine

Time must be recorded in military time format. With the exception of Midnight and Noon:

- If the time is in the a.m., conversion is not required.
- If the time is in the p.m., add 12 to the clock time hour.

Examples:

Midnight - 00:00  Noon - 12:00
5:31 am - 05:31  5:31 pm - 17:31
11:59 am - 11:59  11:59 pm - 23:59

Note:

00:00 = midnight. If the time is documented as 00:00 11-24-20XX, review supporting documentation to determine if the Discharge Date should remain 11-24-20XX or if it should be converted to 11-25-20XX.

When converting Midnight or 24:00 to 00:00 do not forget to
change the Discharge Date.
Example: Midnight or 24:00 on 11-24-20XX = 00:00 on 11-25-20XX

**Note:**
Transmission of a case with an invalid date will be rejected from the OPPS Clinical Warehouse. Use of “UTD” for *BMP Results Date and Time* allows the case to be accepted into the warehouse.

**Notes for Abstraction:**

For times that include “seconds”, remove the seconds and record the military time
Example:
15:00:35 would be recorded as 15:00

If the date and/or time of the BMP or electrolyte panel result is unable to be determined from medical record documentation, abstract UTD.

Abstract the result of the earliest BMP or electrolyte panel ordered (closest to arrival).

If there are multiple result times documented for the same BMP or electrolyte panel, use the earliest result time.

**Suggested Data Sources:**

- Emergency Department record

**Guidelines for Abstraction:**

DATA ELEMENT NAME: CBC Order

COLLECTED FOR: ED

DEFINITION: Documentation in the medical record a Completed Blood Count (CBC) was ordered during the emergency department visit.

SUGGESTED DATA COLLECTION QUESTION: Was a CBC ordered by the physician/APN/PA during the emergency department visit?

FORMAT: Length: 1
Type: Alphanumeric
Occurs: 1

ALLOWABLE VALUES: Y (Yes) There is documentation a CBC was ordered by the physician/APN/PA during the emergency department visit.
N (No) There is no documentation a CBC was ordered by the physician/APN/PA during the emergency department visit.

NOTES FOR ABSTRACTION: If there is documentation a CBC was ordered and then the test was cancelled by the physician/APN/PA, select NO.

DATA SOURCES: Nurses Notes
Physician Notes/Orders
Radiology Notes

Guidelines for Abstraction:

<table>
<thead>
<tr>
<th>Inclusion</th>
<th>Exclusion</th>
</tr>
</thead>
<tbody>
<tr>
<td>None</td>
<td>None</td>
</tr>
</tbody>
</table>
**Data Element Name:** CBC Order Date and Time

**Collected For:** ED

**Definition:** The month, day, year and the exact time (military time) represented in hours and minutes at which the earliest Complete Blood Count (CBC) was ordered.

**Suggested Data Collection Question:** What is the date and time of the earliest CBC order?

**Format:**

- **Length:** 16 – MM-DD-YYYY (includes dashes) and HH:MM (with or without colon) or UTD
- **Type:** Date/Time
- **Occurs:** 1

**Allowable Values:**

- MM = Month (01-12)
- DD = Day (01-31)
- YYYY = Year (2000-Current Year)
- HH = Hour (00-23)
- MM = Minutes (00-59)
- UTD = Unable to Determine

Time must be recorded in military time format. With the exception of Midnight and Noon:

- If the time is in the a.m., conversion is not required.
- If the time is in the p.m., add 12 to the clock time hour.

Examples:

- Midnight - 00:00
- Noon - 12:00
- 5:31 am - 05:31
- 5:31 pm - 17:31
- 11:59 am - 11:59
- 11:59 pm - 23:59

**Note:**

00:00 = midnight. If the time is documented as 00:00 11-24-20XX, review supporting documentation to determine if the Discharge Date should remain 11-24-20XX or if it should be converted to 11-25-20XX.
When converting Midnight or 24:00 to 00:00 do not forget to change the Discharge Date.
Example: Midnight or 24:00 on 11-24-20XX = 00:00 on 11-25-20XX

**Note:**
Transmission of a case with an invalid date will be rejected from the OPPS Clinical Warehouse. Use of “UTD” for **CBC Order Date and Time** allows the case to be accepted into the warehouse.

**Notes for Abstraction:**
For times that include “seconds”, remove the seconds and record the military time
Example:
15:00:35 would be recorded as 15:00

If the date and/or time of the CBC order is unable to be determined from medical record documentation, abstract UTD.

Abstract the order of the earliest CBC ordered (closest to arrival).

If there are multiple order times documented for the same CBC order, use the earliest order time.

**Suggested Data Sources:**
- Emergency Department record

</table>
Data Element Name: Discharge Status

Collected For: ED

Definition: The place or setting to which the patient was discharged from the emergency department.

Suggested Data Collection Question: What was the patient’s discharge disposition from the emergency department?

Format:

- Length: 2
- Type: Alphanumeric
- Occurs: 1

Allowable Values:

01 Discharged to home care or self care (routine discharge)
   Usage Note: Includes discharge to home; home on oxygen if DME only; any other DME only; group home, independent living and other residential care arrangements; outpatient programs, such as partial hospitalization or outpatient chemical dependency programs.

02 Discharged/transferred to a short term general hospital for inpatient care (Acute Care Facility)

03 Discharged/transferred to skilled nursing facility (SNF) with Medicare certification in anticipation of covered skilled care
   Usage Note: Medicare indicates that the patient is discharged/transferred to a Medicare certified nursing facility. For hospitals with an approved swing bed arrangement, use Code 61-Swing Bed. For reporting other discharges/transfers to nursing facilities, see 04 and 64.

04 Discharged/transferred to a facility that provides custodial or supportive care
   Usage Note: Includes intermediate care facilities (ICFs) if specifically designated at the state level. Also used to designate patients that are discharged/transferred to a nursing facility with neither Medicare nor Medicaid certification and for discharges/transfers to Assisted
Living Facilities.

05 Discharged/transferred to a designate cancer center or children’s hospital
Usage Note: Transfers to non-designated cancer hospitals should use Code 02. A list of (National Cancer Institute) Designated Cancer Centers can be found at http://www3.cancer.gov/cancercenters/centerslist.html

06 Discharged/transferred to home under care of organized home health service organization in anticipation of covered skilled care
Usage Note: Report this code when the patient is discharged/transferred to home with a written plan of care (tailored to the patient’s medical needs) for home care services.

07 Left against medical advice or discontinued care

09 Admitted as an inpatient to this hospital
Usage Note: For use only on Medicare outpatient claims. Applies only to those Medicare outpatient services that begin greater than three days prior to an admission.

20 Expired

21 Discharged/transferred to court/law enforcement
Usage Note: Includes transfers to incarceration facilities such as jail, prison, or other detention facilities.

41 Expired in a medical facility (e.g., hospital, SNF, ICF or freestanding hospice)
Usage Note: For use only on Medicare and TRICARE claims for hospice care.

43 Discharged/transferred to a Federal health care facility
Usage Note: Discharges and transfers to a government operated health care facility such as a Department of Defense hospital, a Veteran’s Administration hospital or a Veteran’s Administration nursing facility. To be used whenever the destination at discharge is a federal health care facility, whether the patient resides there or not.

50  Hospice - home

51  Hospice - medical facility (certified) providing hospice level of care

61  Discharged/transferred to hospital-based Medicare approved swing bed
   Usage Note: Medicare-used for reporting patients discharged/transferred to a SNF level of care within the hospital's approved swing bed arrangement.

62  Discharged/transferred to an inpatient rehabilitation facility (IRF) including rehabilitation distinct part units of a hospital

63  Discharged/transferred to a Medicare certified long term care hospital (LTCH)
   Usage Note: For hospitals that meet the Medicare criteria for LTCH certification.

64  Discharged/transferred to a nursing facility certified under Medicaid but not certified under Medicare

65  Discharged/transferred to a psychiatric hospital or psychiatric distinct part of a hospital

66  Discharged/transferred to a Critical Access Hospital (CAH)

70  Discharged/transferred to another type of Health Care Institution not Defined Elsewhere in this Code List (see code 05)

Note:
CMS is aware that there are additional UB-04 allowable values for this data element; however, they are not used for
the hospital outpatient measures at this time.

Notes for Abstraction:

- The values for *Discharge Status* are taken from the National Uniform Billing Committee (NUBC) manual which is used by the billing/HIM to complete the UB-04.
- Because this data element is critical in determining the population for these measures, the abstractor should NOT assume that the UB-04 value is what is reflected in the medical record. For abstraction purposes, it is important that the medical record reflect the appropriate discharge status. If the abstractor determines through chart review that the claim information discharge status is not what is reflected in the medical record, correct and override the downloaded value.

Suggested Data Sources:

- Emergency Department record
- UB-04

Definition: The documented month, day and year the patient arrived in the hospital outpatient setting.

Suggested Data Collection Question: What was the date the patient arrived in the hospital outpatient setting?

Format: Length: 10 – MM-DD-YYYY (includes dashes)
Type: Date
Occurs: 1

Allowable Values: MM = Month (01-12)
DD = Day (01-31)
YYYY = Year (2008-Current Year)

Notes for Abstraction:
- The intent of this data element is to determine the date the patient arrived in the hospital outpatient setting.
- UTD is NOT an allowable value.
- Consider the outpatient encounter date as the earliest documented date the patient arrived in the applicable hospital outpatient setting.

Suggested Data Sources:
- Outpatient record
- Emergency Department record

Guidelines for Abstraction:

DATA ELEMENT NAME:  *Pain Medication*

COLLECTED FOR:  ED

DEFINITION:  Documentation the patient was administered oral or parenteral pain medication. Assessment and relief of pain is an expectation patients have when they visit the ED. Documentation of medication administration is a standard of care.

SUGGESTED DATA COLLECTION QUESTION:  Was there documentation the patient received oral or parenteral pain medication during this emergency department visit?

FORMAT:  
   Length:  1  
   Type:  Alphanumeric
   Occurs:  1

ALLOWABLE VALUES:  
   Y (Yes) There is documentation the patient received oral or parenteral pain medication or there is documentation the patient refused the pain medication during this emergency department visit.

   N (No)  There is no documentation the patient received oral or parenteral pain medication during this emergency department visit or unable to determine from medical record documentation.

NOTES FOR ABSTRACTION:  In order to select “yes”:
   
   •  There must be documentation in the medical record the medication was administered in the emergency department, not just ordered.
   
   •  There must be documentation in the medical record of the medication route either in the physician orders or the medication administration documentation.

   •  Medication administration documentation must include the signature or initials of the person administering the medication.
- If there is documentation in the medical record the patient received pain medication prior to arrival, abstract as “yes”.
- If there is physician/PA/APN documentation of a reason for not administering pain medication, select “No”. E.g. pt unconscious, decreased respiratory rate, patient refusal.

**DATA SOURCES:**
Nurses Notes  
Physician Notes

**Guidelines for Abstraction:**

<table>
<thead>
<tr>
<th>Inclusion</th>
<th>Exclusion</th>
</tr>
</thead>
<tbody>
<tr>
<td>See Appendix C, OP Table 8.1 for a list of pain medications</td>
<td>None</td>
</tr>
</tbody>
</table>
Data Element Name:  *Pain Medication Date and Time*

Collected For:  ED

Definition:  The month, day, year and the exact time (military time) represented in hours and minutes at which the earliest oral or parenteral pain medication was administered.

Suggested Data Collection Question:  What is the date and time of the earliest pain medication administration?

Format:

- **Length:** 16 – MM-DD-YYYY (includes dashes) and HH:MM (with or without colon) or UTD
- **Type:** Date/Time
- **Occurs:** 1

Allowable Values:

- MM = Month (01-12)
- DD = Day (01-31)
- YYYY = Year (2000-Current Year)
- HH = Hour (00-23)
- MM = Minutes (00-59)
- UTD = Unable to Determine

Time must be recorded in military time format. With the exception of Midnight and Noon:

- If the time is in the a.m., conversion is not required.
- If the time is in the p.m., add 12 to the clock time hour.

Examples:

- Midnight - 00:00  Noon - 12:00
- 5:31 am - 05:31  5:31 pm - 17:31
- 11:59 am - 11:59  11:59 pm - 23:59

**Note:**

00:00 = midnight. If the time is documented as 00:00 11-24-20XX, review supporting documentation to determine if the Discharge Date should remain 11-24-20XX or if it should be converted to 11-25-20XX.

When converting Midnight or 24:00 to 00:00 do not forget to
change the Discharge Date.  
Example: Midnight or 24:00 on 11-24-20XX = 00:00 on 11-25-20XX  

Note:  
Transmission of a case with an invalid date will be rejected from the OPPS Clinical Warehouse. Use of “UTD” for Pain Medication Date and Time allows the case to be accepted into the warehouse.  

Notes for Abstraction:  
For times that include “seconds”, remove the seconds and record the military time  
Example:  
15:00:35 would be recorded as 15:00  
If the date and/or time of the pain medication administration is unable to be determined from medical record documentation, abstract UTD.  
If there are multiple medication administration times documented, use the earliest result time.  
If there is documentation in the medical record the patient received pain medication prior to arrival abstract the pain medication date and time as the patient arrival date and time.  

Suggested Data Sources:  
• Emergency Department record  

Guidelines for Abstraction:

DATA ELEMENT NAME: Troponin Order

COLLECTED FOR: ED

DEFINITION: Documentation in the medical record a Troponin was ordered during emergency department visit.

SUGGESTED DATA COLLECTION QUESTION: Was a Troponin ordered by the physician/APN/PA during the emergency department visit?

FORMAT: 

<table>
<thead>
<tr>
<th>Length:</th>
<th>1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type:</td>
<td>Alphanumeric</td>
</tr>
<tr>
<td>Occurs:</td>
<td>1</td>
</tr>
</tbody>
</table>

ALLOWABLE VALUES: Y (Yes) There is documentation the physician/APN/PA ordered a Troponin during the emergency department visit.

N (No) There is no documentation the physician/APN/PA ordered a Troponin during the emergency department visit or unable to determine (UTD).

NOTES FOR ABSTRACTION: If there is documentation a Troponin was ordered and then the test was cancelled by the physician/APN/PA, select NO.

DATA SOURCES: Nurses Notes
Physician Notes/Orders
Radiology Notes

Guidelines for Abstraction:

</tbody>
</table>

Time must be recorded in military time format. With the exception of Midnight and Noon:

- If the time is in the a.m., conversion is not required.
- If the time is in the p.m., add 12 to the clock time hour.

Examples:

Midnight - 00:00  Noon - 12:00
5:31 am - 05:31  5:31 pm - 17:31
11:59 am - 11:59 11:59 pm - 23:59

Note: 00:00 = midnight. If the time is documented as 00:00 11-24-20XX, review supporting documentation to determine if the Discharge Date should remain 11-24-20XX or if it should be converted to 11-25-20XX.

When converting Midnight or 24:00 to 00:00 do not forget to
change the Discharge Date.  
Example: Midnight or 24:00 on 11-24-20XX = 00:00 on 11-25-20XX

**Note:**
Transmission of a case with an invalid date will be rejected from the OPPS Clinical Warehouse. Use of “UTD” for *Troponin Order Date and Time* allows the case to be accepted into the warehouse.

Notes for Abstraction:

For times that include “seconds”, remove the seconds and record the military time  
Example:  
15:00:35 would be recorded as 15:00

If the date and/or time of the Troponin order is unable to be determined from medical record documentation, abstract UTD.  

Abstract the order of the earliest Troponin ordered (closest to arrival).  

If there are multiple order times documented for the same Troponin order, use the earliest order time.

**Suggested Data Sources:**

- Emergency Department record

**Guidelines for Abstraction:**

<table>
