This form contains the measure information submitted by stewards. Blank fields indicate no information was provided. Attachments also may have been submitted and are provided to reviewers. The subcriteria and most of the footnotes from the evaluation criteria are provided in Word comments within the form and will appear if your cursor is over the highlighted area. Hyperlinks to the evaluation criteria and ratings are provided in each section.

TAP/Workgroup (if utilized): Complete all yellow highlighted areas of the form. Evaluate the extent to which each subcriterion is met. Based on your evaluation, summarize the strengths and weaknesses in each section.

Note: If there is no TAP or workgroup, the SC also evaluates the subcriteria (yellow highlighted areas).

Steering Committee: Complete all pink highlighted areas of the form. Review the workgroup/TAP assessment of the subcriteria, noting any areas of disagreement; then evaluate the extent to which each major criterion is met; and finally, indicate your recommendation for the endorsement. Provide the rationale for your ratings.

Evaluation ratings of the extent to which the criteria are met
C = Completely (unquestionably demonstrated to meet the criterion)
P = Partially (demonstrated to partially meet the criterion)
M = Minimally (addressed BUT demonstrated to only minimally meet the criterion)
N = Not at all (NOT addressed; OR incorrectly addressed; OR demonstrated to NOT meet the criterion)
NA = Not applicable (only an option for a few subcriteria as indicated)

Four conditions must be met before proposed measures may be considered and evaluated for suitability as voluntary consensus standards:

A. The measure is in the public domain or an intellectual property (measure steward agreement) is signed. Public domain only applies to governmental organizations. All non-government organizations must sign a measure steward agreement even if measures are made publicly and freely available.

A.1 Do you attest that the measure steward holds intellectual property rights to the measure and the right to use aspects of the measure owned by another entity (e.g., risk model, code set)? Yes

A.2 Indicate if Proprietary Measure (as defined in measure steward agreement):
A.3 Measure Steward Agreement: Agreement will be signed and submitted prior to or at the time of measure submission

A.4 Measure Steward Agreement attached: A

Rating: C=Completely; P=Partially; M=Minimally; N=Not at all; NA=Not applicable
### B. The measure owner/steward verifies there is an identified responsible entity and process to maintain and update the measure on a schedule that is commensurate with the rate of clinical innovation, but at least every 3 years. Yes, information provided in contact section

<table>
<thead>
<tr>
<th>B</th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### C. The intended use of the measure includes both public reporting and quality improvement.

- **Purpose:** Public reporting, Internal quality improvement
- **Accountability**

<table>
<thead>
<tr>
<th>C</th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### D. The requested measure submission information is complete. Generally, measures should be fully developed and tested so that all the evaluation criteria have been addressed and information needed to evaluate the measure is provided. Measures that have not been tested are only potentially eligible for a time-limited endorsement and in that case, measure owners must verify that testing will be completed within 12 months of endorsement.

#### D.1 Testing

- **Yes, fully developed and tested**

#### D.2 Have NQF-endorsed measures been reviewed to identify if there are similar or related measures? Yes

#### 1. IMPORTANCE TO MEASURE AND REPORT

**Extent to which the specific measure focus is important to making significant gains in health care quality (safety, timeliness, effectiveness, efficiency, equity, patient-centeredness) and improving health outcomes for a specific high impact aspect of healthcare where there is variation in or overall poor performance. Measures must be judged to be important to measure and report in order to be evaluated against the remaining criteria.**

<table>

<th>M</th>
<th>N</th>
</tr>
</thead>
</table>

-(for NQF staff use) **Specific NPP goal:**

1a.1 Demonstrated High Impact Aspect of Healthcare: Affects large numbers, Leading cause of morbidity/mortality, High resource use

1a.2

1a.3 Summary of Evidence of High Impact: •16.3 million Americans are living with coronary heart disease - of that 16.3 million, 54% are men and 46% are women. (1)

•Coronary heart disease makes up more than half of all cardiovascular events in men and women less than 75 years of age. (1)

•The lifetime risk of developing coronary heart disease after age 40 is 49% for men and 32% for women. (1)

•The incidence of coronary heart disease in women lags behind men by 10 years for total coronary heart disease and by 20 years for more serious clinical events such as myocardial infarction and death. (1)

•Coronary heart disease caused approximately 1 of every 6 deaths in the United States in 2007. (1)

•While death rates have fallen from 1968 to the present, coronary heart disease is the largest killer of men and women in the United States. (1) It has been estimated that approximately 47% of this decrease is attributed to treatments (medical and surgical), while approximately 44% is attributed to changes in risk

---

**Comment [KP1]:** 1a. The measure focus addresses:

- *a specific national health goal/priority identified by NQF’s National Priorities Partners; OR*
- *a demonstrated high impact aspect of healthcare (e.g., affects large numbers, leading cause of morbidity/mortality, high resource use (current and/or future), severity of illness, and patient/societal consequences of poor quality).*
In 2007, the estimated direct and indirect cost for coronary heart disease in the United States is $177.5 billion. (1)

In 2006, coronary artery disease was the most expensive condition treated in US hospitals at a cost of $52.6 billion (2) and accounted for 5% of total hospitalization costs. (3)

Thirty percent of Medicare’s total expenditures are applied to cardiovascular disease. (4)

In 2007, $5.2 billion was spent on outpatient visits related to chronic ischemic heart disease. (5)

Citations for Evidence of High Impact:

Opportunity for Improvement

1b.1 Benefits (improvements in quality) envisioned by use of this measure: Improvement in the number of patients with CAD who have diabetes or LVEF <40% who are prescribed ACE inhibitor or ARB therapy.

1b.2 Summary of data demonstrating performance gap (variation or overall poor performance) across providers:

Although there have been improvements in the prescription rates of secondary prevention medications for CAD patients, a gap persists between the benefits demonstrated with these medications in clinical trials and the effectiveness observed in clinical practice. One potential explanation for this discrepancy is suboptimal adherence to secondary prevention medications in practice compared with clinical trials, where adherence is often closely monitored. One study found that over a median follow up of 4.1 years, medication nonadherence to statins, ACE inhibitors, and beta-blockers was common, occurring in approximately 1 in 4 patients. Among patients dispensed ACE inhibitors or angiotensin-receptor blockers (n = 10,021), 21.6% were nonadherent. (2)

A study conducted by Rabus and colleagues followed 73 patients who were diagnosed to have CAD were followed up for 5 years. They concluded there was sub-optimal prescribing of secondary prevention drugs and absence of continuity of prescribing these secondary prevention drugs in pharmaceutical care of coronary artery disease patients.

- The ‘initial prescribing rate’ at discharge was found to be 44% for ACE inhibitors.
- ‘Continuity of prescribing’ for 5 years was, 17% for ACE inhibitors. (3)

Berthiaume and colleagues conducted a study to evaluate the effect of a managed care organization’s intervention program in optimizing secondary prevention of CAD. An analysis that examined 48,586 medical records of patients with CAD demonstrated that The prescription rates for all 3 medications (lipid-lowering agents, ACE/ARBs and beta-blockers) used in secondary prevention of CAD consistently improved from 2000 to 2004. More specifically, use of ACE inhibitors or ARBs increased consistently over time from 44% to 55%. (1)
Additional data is available in section 1 of the CAD measure testing summary.

1b.3 Citations for data on performance gap:

1b.4 Summary of Data on disparities by population group:
We are not aware of any publications/evidence outlining disparities in this area.

1b.5 Citations for data on Disparities:

1c. Outcome or Evidence to Support Measure Focus

1c.1 Relationship to Outcomes (For non-outcome measures, briefly describe the relationship to desired outcome. For outcomes, describe why it is relevant to the target population): Nonadherence to cardioprotective medications is prevalent among outpatients with CAD and can be associated with a broad range of adverse outcomes, including all-cause and cardiovascular mortality, cardiovascular hospitalizations, and the need for revascularization procedures.

In the absence of contraindications, ACE inhibitors or ARBs are recommended for all patients with a diagnosis of CAD and diabetes or reduced left ventricular systolic function. ACE inhibitors remain the first choice, but ARBs can now be considered a reasonable alternative. Both pharmacologic agents have been shown to decrease the risk of death, myocardial infarction, and stroke. Additional benefits of ACE inhibitors include the reduction of diabetic symptoms and complications for patients with diabetes.

1c.2-3. Type of Evidence: Evidence-based guideline

1c.4 Summary of Evidence (as described in the criteria; for outcomes, summarize any evidence that healthcare services/care processes influence the outcome):

1c.5 Rating of strength/quality of evidence (also provide narrative description of the rating and by whom):

1c.6 Method for rating evidence:

1c.7 Summary of Controversy/Contradictory Evidence:

1c.8 Citations for Evidence (other than guidelines):

1c.9 Quote the Specific guideline recommendation (including guideline number and/or page number): ACE inhibitors should be started and continued indefinitely in all patients with left ventricular ejection fraction less than or equal to 40% and in those with hypertension, diabetes, or chronic kidney disease, unless contraindicated. (Class I Recommendation, Level A Evidence). (ACC/AHA, 2007)

Angiotensin receptor blockers are recommended for patients who have hypertension, have indicators for but are intolerant of ACE inhibitors, have heart failure, or have had a myocardial infarction with left ventricular ejection fraction less than or equal to 40% (Class I Recommendation, Level A Evidence). (ACC/AHA, 2007)

J Am Coll Cardiol. 2007;50:2264-2274.

1c.11 National Guideline Clearinghouse or other URL:

1c.12 Rating of strength of recommendation *(also provide narrative description of the rating and by whom):*

1c.13 Method for rating strength of recommendation *(If different from USPSTF system, also describe rating and how it relates to USPSTF):

ACC/AHA Classification of Recommendations and Levels of Evidence

Classification of Recommendations:

Class I: Conditions for which there is evidence and/or general agreement that a given procedure or treatment is beneficial, useful, and effective.

Class II: Conditions for which there is conflicting evidence and/or a divergence of opinion about the usefulness/effectiveness of a procedure or treatment.

Class IIa: Weight of evidence/opinion is in favor of usefulness/effectiveness.

Class IIb: Usefulness/effectiveness is less well established by evidence/opinion.

Class III: Conditions for which there is evidence and/or general agreement that a procedure/treatment is not useful/effective and in some cases may be harmful.

Level of Evidence

Level of Evidence A: Data derived from multiple randomized clinical trials or meta-analyses.

Level of Evidence B: Data derived from a single randomized trial, or nonrandomized studies.

Level of Evidence C: Only consensus

1c.14 Rationale for using this guideline over others:

It is the PCPI policy to use guidelines, which are evidence-based, applicable to physicians and other healthcare providers, and developed by a national specialty organization or government agency. In addition, the PCPI has now expanded what is acceptable as the evidence base for measures to include documented quality improvement (QI) initiatives or implementation projects that have demonstrated improvement in the quality of care.

TAP/Workgroup: What are the strengths and weaknesses in relation to the subcriteria for Importance to Measure and Report?

Steering Committee: Was the threshold criterion, Importance to Measure and Report, met? Rationale:

2. SCIENTIFIC ACCEPTABILITY OF MEASURE PROPERTIES

Extent to which the measure, as specified, produces consistent (reliable) and credible (valid) results about the quality of care when implemented. *(evaluation criteria)*

2a. MEASURE SPECIFICATIONS

S.1 Do you have a web page where current detailed measure specifications can be obtained?

2a. Precisely Specified

2a.1 Numerator Statement *(Brief, text description of the numerator - what is being measured about the target population, e.g. target condition, event, or outcome):*

Patients who were prescribed ACE inhibitor or ARB therapy*

*Comment [K7]: USPSTF grading system http://www.ahrq.gov/clinic/uspstf/grades.htm: A - The USPSTF recommends the service. There is high certainty that the net benefit is substantial. B - The USPSTF recommends the service. There is high certainty that the net benefit is moderate or there is moderate certainty that the net benefit is moderate to substantial. C - The USPSTF recommends against routinely providing the service. There may be considerations that support providing the service in an individual patient. There is at least moderate certainty that the net benefit is small. Offer or provide this service only if other considerations support the offering or providing the service in an individual patient. D - The USPSTF recommends against the service. There is moderate or high certainty that the service has no net benefit or that the harms outweigh the benefits. I - The USPSTF concludes that the current evidence is insufficient to assess the balance of benefits and harms of the service. Evidence is lacking, of poor quality, or conflicting, and the balance of benefits and harms cannot be determined.
*Prescribed may include prescription given to the patient for ACE inhibitor or ARB therapy at one or more visits in the measurement period OR patient already taking ACE inhibitor or ARB therapy as documented in current medication list

| 2a.2 Numerator Time Window (The time period in which cases are eligible for inclusion in the numerator): |
| Once during measurement period |

| 2a.3 Numerator Details (All information required to collect/calculate the numerator, including all codes, logic, and definitions): |
| See attached for EHR Specifications. For Claims/Administrative: Report CPT II Code 4009F: Angiotensin converting enzyme (ACE) inhibitor or Angiotensin Receptor Blocker (ARB) therapy prescribed |

| 2a.4 Denominator Statement (Brief, text description of the denominator - target population being measured): |
| All patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12 month period who also have diabetes or a current or prior LVEF <40% |

| 2a.5 Target population gender: |
| Female, Male |

| 2a.6 Target population age range: |
| Aged 18 years and older |

| 2a.7 Denominator Time Window (The time period in which cases are eligible for inclusion in the denominator): |
| 12 consecutive months |

| 2a.8 Denominator Details (All information required to collect/calculate the denominator - the target population being measured - including all codes, logic, and definitions): |
| See attached for EHR Specifications. For Claims/Administrative: See coding tables attached for coding (ICD-9-CM, ICD-10-CM, CPT) |

| 2a.9 Denominator Exclusions (Brief text description of exclusions from the target population): |
| Documentation of patient reason(s) for not prescribing ACE inhibitor or ARB therapy (eg, patient declined, other patient reasons) |
| Documentation of system reason(s) for not prescribing ACE inhibitor or ARB therapy (eg, lack of drug availability, other reasons attributable to the health care system) |

| 2a.10 Denominator Exclusion Details (All information required to collect exclusions to the denominator, including all codes, logic, and definitions): |
| See attached for EHR Specifications. For Claims/Administrative: Documentation of medical reason(s) for not prescribing ACE inhibitor or ARB therapy (eg, allergy, intolerant, pregnancy, renal failure due to ACE inhibitor, diseases of the aortic or mitral valve, other medical reasons) |
| Append modifier to CPT II code 4009F-1P |
| Documentation of patient reason(s) for not prescribing ACE inhibitor or ARB therapy (eg, patient declined, other patient reasons) |
| Append modifier to CPT II code 4009F-2P |
| Documentation of system reason(s) for not prescribing ACE inhibitor or ARB therapy (eg, lack of drug availability, other reasons attributable to the health care system) |
| Append modifier to CPT II code 4009F-3P |

| 2a.11 Stratification Details/Variables (All information required to stratify the measure including the stratification variables, all codes, logic, and definitions): |

| 2a.12-13 Risk Adjustment Type: |
| No risk adjustment necessary |
### 2a. Risk Adjustment Methodology/Variables

Comment [KP10]: 2b. Reliability testing demonstrates the measure results are repeatable, producing the same results a high proportion of the time when assessed in the same population in the same time period.

Comment [k11]: 8 Examples of reliability testing include, but are not limited to: inter-rater/abstractor or intra-rater/abstractor studies; internal consistency for multi-item scales; test-retest for survey items. Reliability testing may address the data items or final measure score.

Comment [KP12]: 2c. Validity testing demonstrates that the measure reflects the quality of care provided, adequately distinguishing good and poor quality. If face validity is the only validity addressed, it is systematically assessed.
### 2c. Analytic Method (type of validation & rationale, method for testing):

All PCPI performance measures are assessed for content validity by expert work group members during the development process. Additional input on the content validity of draft measures is obtained through a 30-day public comment period and by also soliciting comments from a panel of consumer, purchaser, and patient representatives convened by the PCPI specifically for this purpose. All comments received are reviewed by the expert work group and the measures are adjusted as needed. Other external review groups (e.g., focus groups) may be convened if there are any remaining concerns related to the content validity of the measures.

### 2c.3 Testing Results (statistical results, assessment of adequacy in the context of norms for the test conducted):

#### 2d. Exclusions Justified

| 2d.1 Summary of Evidence supporting exclusion(s): | Additional data is available in section 5 of the CAD measure testing summary. |
| 2d.2 Citations for Evidence: | Additional data is available in section 5 of the CAD measure testing summary. |
| 2d.3 Data/sample (description of data/sample and size): | Additional data is available in section 5 of the CAD measure testing summary. |
| 2d.4 Analytic Method (type analysis & rationale): | Additional data is available in section 5 of the CAD measure testing summary. |
| 2d.5 Testing Results (e.g., frequency, variability, sensitivity analyses): | Additional data is available in section 5 of the CAD measure testing summary. |

#### 2e. Risk Adjustment for Outcomes/Resource Use Measures

| 2e.1 Data/sample (description of data/sample and size): | This measure does not employ the use of risk adjustment. |
| 2e.2 Analytic Method (type of risk adjustment, analysis, & rationale): | |
| 2e.3 Testing Results (risk model performance metrics): | |
| 2e.4 If outcome or resource use measure is not risk adjusted, provide rationale: | |

### 2f. Identification of Meaningful Differences in Performance

| 2f.1 Data/sample from Testing or Current Use (description of data/sample and size): | Additional data is available in section 1 of the CAD measure testing summary. |
| 2f.2 Methods to identify statistically significant and practically/meaningfully differences in performance (type of analysis & rationale): | Additional data is available in section 1 of the CAD measure testing summary. |
| 2f.3 Provide Measure Scores from Testing or Current Use (description of scores, e.g., distribution by quartile, mean, median, SD, etc.; identification of statistically significant and meaningfully differences in performance): | Additional data is available in section 1 of the CAD measure testing summary. |

#### 2g. Comparability of Multiple Data Sources/Methods

| 2g.1 Data/sample from Testing or Current Use (description of data/sample and size): | Additional data is available in section 5 of the CAD measure testing summary. |
| 2g.2 Methods to identify comparability of multiple data sources/Methods: | Additional data is available in section 5 of the CAD measure testing summary. |

### Additional Data

Additional data is available in section 5 of the CAD measure testing summary.
2g.1 Data/sample (description of data/sample and size): Additional data is available in sections 6, 7, 8, 9, and 10 of the CAD measure testing summary.

2g.2 Analytic Method (type of analysis & rationale): Additional data is available in sections 6, 7, 8, 9, and 10 of the CAD measure testing summary.

2g.3 Testing Results (e.g., correlation statistics, comparison of rankings): Additional data is available in sections 6, 7, 8, 9, and 10 of the CAD measure testing summary.

2h. Disparities in Care

2h.1 If measure is stratified, provide stratified results (scores by stratified categories/cohorts): The measure is not stratified by patient groups or cohorts that could potentially be affected by disparities in care, nor are we aware of any existing research identifying disparities in care that may be relevant to this measure.

2h.2 If disparities have been reported/identified, but measure is not specified to detect disparities, provide follow-up plans:
We are not aware of any relevant disparities that have been identified.

TAP/Workgroup: What are the strengths and weaknesses in relation to the subcriteria for Scientific Acceptability of Measure Properties?

Steering Committee: Overall, to what extent was the criterion, Scientific Acceptability of Measure Properties, met?

Rationale:

3. USABILITY

Extent to which intended audiences (e.g., consumers, purchasers, providers, policy makers) can understand the results of the measure and are likely to find them useful for decision making. (evaluation criteria)

3a. Meaningful, Understandable, and Useful Information

3a.1 Current Use: In use

3a.2 Use in a public reporting initiative (disclosure of performance results to the public at large) (If used in a public reporting initiative, provide name of initiative(s), locations, Web page URL(s). If not publicly reported, state the plans to achieve public reporting within 3 years):
This measure is not yet used in any public reporting initiative. The measure will, however, be eligible for inclusion in the CMS PQRS and other government programs in 2012 and would thus provide information about clinician participation to the public. The ACCF, AHA, and PCPI believe that the reporting of such participation information is a beneficial first step on a trajectory toward the public reporting of performance results, which is most appropriate after the measures are thoroughly tested and the reliability of the performance data has been validated. Continued NQF endorsement will facilitate our ongoing progress toward this public reporting objective.

3a.3 If used in other programs/initiatives (If used in quality improvement or other programs/initiatives, name of initiative(s), locations, Web page URL(s). If not used for QI, state the plans to achieve use for QI within 3 years):
All PCPI measures are suitable for use in quality improvement initiatives and are made freely available on the PCPI website and through the implementation efforts of medical specialty societies and other PCPI members. The PCPI strongly encourages the use of its measures in QI initiatives and seeks to provide information on such initiatives to PCPI members.

2009: claims, registry
2010: registry

Rating: C=Completely; P=Partially; M=Minimally; N=Not at all; NA=Not applicable
The American Heart Association’s Get With The Guidelines®-Outpatient (GWTG-O) is a virtual performance improvement program that will improve adherence to evidence-based care in the outpatient setting, including specialist practices, general healthcare practices and health clinics. GWTG-Outpatient historically has had a long history of quality improvement for cardiovascular care. They have published 65 publications over the past 10 years. This program is designed to assist healthcare professionals in the outpatient setting to provide the best possible care to patients. This program collects a number of clinical measures for primary and secondary prevention. Clinical measure sets include those developed by American Heart Association, including those co-developed with other organizations, such as the American College of Cardiology Foundation and the American Medical Association, as well as other National Quality Forum endorsed measures.

Through this program, we collect data on clinical measures affecting a number of cardiovascular related conditions including, atrial fibrillation, coronary artery disease, heart failure, hypertension, diabetes, and preventative care. The primary analytical system used is Duke Clinical Research Institute. Get With The Guidelines®-Outpatient is a quality improvement program that can be utilized for Maintenance of Certification (MOC) with groups like American Board of Internal Medicine (ABIM) and American Board of Family Medicine (ABFM). ABIM has confirmed that the reports received from Get With The Guidelines-Outpatient can be utilized in completion of their Self-Directed Practice Improvement Module (PIM). The Self-Directed PIM provides one pathway for earning practice performance credit in ABIM’s MOC program. This program includes several integral components: A preliminary Continuing Education (CE) course for the care team, data submission and reporting that is integrated with existing Electronic Health Records (EHRs)/health technology platforms, corresponding professional and provider education including webinars, online tools and resources, digital access to reference materials and videos through the Get With The Guidelines-Outpatient website (http://outpatient.heart.org). The free continuing education activity titled, Outpatient Quality Improvement Focus, addresses the quality chasm and treatment gap, presents the benefits of quality improvement and identifies the steps necessary for implementation in the practice setting. This continuing education activity is certified for physicians, nurses and pharmacists.

The American College of Cardiology Foundation’s Cardiology Practice Improvement Pathway (CPIP) uses clinical measure sets that are developed and specified by the American College of Cardiology Foundation with the American Heart Association and the American Medical Association’s Physician Consortium for Performance Improvement for Hypertension, Stable Coronary Artery Disease, Heart Failure, and Atrial Fibrillation/Atrial Flutter. This program is intended as an approved quality improvement product that can be applied toward ABIM’s Part IV practice performance requirement for Maintenance of Certification (ABIM AQI application submitted). They are in the process of creating a homepage on the Cardiosource.org homepage. The URL will be cardiosource.org/cpip. The web-based tool will be available after spring 2011. Through an online webinar hosted in November 2010, CPIP anticipates enrolling 50 - 100 practices during 2011 which will provide data from about 500-1,000 cardiologists. This ACCF initiative has contracted with the NY QIO: IPRO to analyze and scores based on thresholds. Of the 100 points needed to achieve recognition in the program, 70 come directly from clinical points such as the Heart Failure measures that are being submitted to NQF for consideration. IPRO will audit 5% of practices who submit their data for recognition evaluation.

The American College of Cardiology Foundation’s has an Performance Improvement program entitled “A New Era” which is an educational format approved for credit by the American Medical Association (AMA) and the American Nursing Credentialing Center. This continuing medical education program blends both quality improvement and educational methodologies to provide a high quality learning experience that impacts changes to practice. These activities are structured, long-term processes in which a healthcare professional learns about the heart failure specific performance metrics, uses metrics to retrospectively assess his practice, applies these metrics prospectively over a useful interval, and reevaluates his performance. As part of this process, clinicians set goals for change and engage in structured learning activities to improve their performance. As of December 6th, 2010:
- 425 clinicians have enrolled in A New ERA
- The data is generated from all but four states (Montana, New Hampshire, South Dakota, and Wyoming)
- 82% are physicians
- 90% agreed or strongly agreed that performance metric data were valuable
- 80% agreed or strongly agreed that performance metric data review would help them improve their practice
No one has finished the program, as it takes several months to do so.

In 2008, the American College of Cardiology Foundation launched the PINNACLE program (formerly known as the Improving Continuous Cardiac Care or IC3). This was the first, national, prospective, outpatient based cardiac QI registry in the US. While participation is voluntary, this registry collects a variety of longitudinal patient data at the point of service, including patients’ symptoms, vital signs, medication, and recent hospitalizations. Jointly developed ACCF/AHA/PCPI measures for Coronary Artery Disease, Heart Failure, and Atrial Fibrillation. Data collection is achieved in 2 ways for the practices: paper forms or practice’s electronic medical record data collection systems. The primary analytical system used is St. Luke’s Mid America Heart Institute. The ACCF registry, PINNACLE, pulls data from outpatient facilities via paper flowsheets or 14 EHR vendors. As of December 10, 2010, there are 47 practices collecting data at 200 sites with 276,000 unique patients representing 1 million documented encounters.

Testing of Interpretability  
(Testing that demonstrates the results are understood by the potential users for public reporting and quality improvement)

3a.4 Data/sample (description of data/sample and size):

3a.5 Methods (e.g., focus group, survey, QI project):

3a.6 Results (qualitative and/or quantitative results and conclusions):

3b/3c. Relation to other NQF-endorsed measures

3b.1 NQF # and Title of similar or related measures:
Maintenance submission of NQF #0066: ACE Inhibitor/Angiotensin Receptor Blocker (ARB) Therapy

(for NQF staff use) Notes on similar/related endorsed or submitted measures:

3b. Harmonization
If this measure is related to measure(s) already endorsed by NQF (e.g., same topic, but different target population/setting/data source or different topic but same target population):

3b.2 Are the measure specifications harmonized? If not, why?

3c. Distinctive or Additive Value
3c.1 Describe the distinctive, improved, or additive value this measure provides to existing NQF-endorsed measures:

5.1 If this measure is similar to measure(s) already endorsed by NQF (i.e., on the same topic and the same target population), Describe why it is a more valid or efficient way to measure quality:

TAP/Workgroup: What are the strengths and weaknesses in relation to the subcriteria for Usability?

Steering Committee: Overall, to what extent was the criterion, Usability, met?
Rationale:

4. FEASIBILITY

Extent to which the required data are readily available, retrievable without undue burden, and can be implemented for performance measurement. (evaluation criteria)

4a. Data Generated as a Byproduct of Care Processes
4a.1-2 How are the data elements that are needed to compute measure scores generated?
### Data generated as byproduct of care processes during care delivery
(Data are generated and used by healthcare personnel during the provision of care, e.g., blood pressure, lab value, medical condition), Coding/abstraction performed by someone other than person obtaining original information (E.g., DRG, ICD-9 codes on claims, chart abstraction for quality measure or registry)

#### 4b. Electronic Sources

<table>
<thead>
<tr>
<th>4b.1 Are all the data elements available electronically? (elements that are needed to compute measure scores are in defined, computer-readable fields, e.g., electronic health record, electronic claims)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>4b.2 If not, specify the near-term path to achieve electronic capture by most providers.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
</tbody>
</table>

#### 4c. Exclusions

<table>
<thead>
<tr>
<th>4c.1 Do the specified exclusions require additional data sources beyond what is required for the numerator and denominator specifications?</th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>4c.2 If yes, provide justification.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
</tbody>
</table>

#### 4d. Susceptibility to Inaccuracies, Errors, or Unintended Consequences

<table>
<thead>
<tr>
<th>4d.1 Identify susceptibility to inaccuracies, errors, or unintended consequences of the measure and describe how these potential problems could be audited. If audited, provide results.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Although we are not currently aware of any unintended consequences related to this measure, we plan through an active redesign of the PCPI website to facilitate the collection of information on unintended consequences from the users of PCPI measures.</td>
</tr>
</tbody>
</table>

#### 4e. Data Collection Strategy/Implementation

<table>
<thead>
<tr>
<th>4e.1 Describe what you have learned/modified as a result of testing and/or operational use of the measure regarding data collection, availability of data/missing data, timing/frequency of data collection, patient confidentiality, time/cost of data collection, other feasibility/implementation issues:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Additional data is available in section 3 of the CAD measure testing summary.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>4e.2 Costs to implement the measure (costs of data collection, fees associated with proprietary measures):</th>
</tr>
</thead>
<tbody>
<tr>
<td>Additional data is available in section 3 of the CAD measure testing summary.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>4e.3 Evidence for costs:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Additional data is available in section 3 of the CAD measure testing summary.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>4e.4 Business case documentation:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Additional data is available in section 3 of the CAD measure testing summary.</td>
</tr>
</tbody>
</table>

TAP/Workgroup: What are the strengths and weaknesses in relation to the subcriteria for Feasibility?

<table>
<thead>
<tr>
<th>4 Steering Committee: Overall, to what extent was the criterion, Feasibility, met?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rationale:</td>
</tr>
</tbody>
</table>

**RECOMMENDATION**

(for NQF staff use) Check if measure is untested and only eligible for time-limited endorsement.

**Comment [KP27]: 4b.** The required data elements are available in electronic sources. If the required data are not in existing electronic sources, a credible, near-term path to electronic collection by most providers is specified and clinical data elements are specified for transition to the electronic health record.

**Comment [KP28]: 4c.** Exclusions should not require additional data sources beyond what is required for scoring the measure (e.g., numerator and denominator) unless justified as supporting measure validity.

**Comment [KP29]: 4d.** Susceptibility to inaccuracies, errors, or unintended consequences and the ability to audit the data items to detect such problems are identified.

**Comment [KP30]: 4e.** Demonstration that the data collection strategy (e.g., source, timing, frequency, sampling, patient confidentiality, etc.) can be implemented (e.g., already in operational use, or testing demonstrates that it is ready to put into operational use).
Steering Committee: Do you recommend for endorsement?

Peter K. Smith, MD (thoracic surgery)  
Patrick J. Torcson, MD, FACP, MMM (hospital medicine)  
John B. Wong MD, FACP (internal medicine)  
PCPI measures are developed through cross-specialty, multi-disciplinary work groups. All medical specialties and other health care professional disciplines participating in patient care for the clinical condition or topic under study must be equal contributors to the measure development process. In addition, the PCPI strives to include on its work groups individuals representing the perspectives of patients, consumers, private health plans, and employers. This broad-based approach to measure development ensures buy-in on the measures from all stakeholders and minimizes bias toward any individual specialty or stakeholder group. All work groups have at least two co-chairs who have relevant clinical and/or measure development expertise and who are responsible for ensuring that consensus is achieved and that all perspectives are voiced.
Ad.2 If adapted, provide name of original measure: Maintenance submission of NQF #0066: ACE Inhibitor/Angiotensin Receptor Blocker (ARB) Therapy

Ad.3-5 If adapted, provide original specifications URL or attachment

Measure Developer/Steward Updates and Ongoing Maintenance

Ad.6 Year the measure was first released: 2003

Ad.7 Month and Year of most recent revision: 05, 2009

Ad.8 What is your frequency for review/update of this measure? Every 3 years or as new evidence becomes available that materially affects the measures

Ad.9 When is the next scheduled review/update for this measure? 05, 2012

Ad.10 Copyright statement/disclaimers: This Physician Performance Measurement Set (PPMS) and related data specifications were developed by the Physician Consortium for Performance Improvement (the Consortium) including the American College of Cardiology (ACC), the American Heart Association (AHA) and the American Medical Association (AMA) to facilitate quality improvement activities by physicians. The performance measures contained in this PPMS are not clinical guidelines and do not establish a standard of medical care, and have not been tested for all potential applications. This PPMS is intended to assist physicians to enhance quality of care and is not intended for comparing individual physicians to each other or for individual physician accountability by comparing physician performance against the measure or guideline.

This PPMS is subject to review and may be revised or rescinded at any time by the Consortium. The PPMS may not be altered without the prior written approval of the Consortium. A PPMS developed by the Consortium, while copyrighted, can be reproduced and distributed, without modification, for noncommercial purposes, e.g., use by health care providers in connection with their practices. Commercial use is defined as the sale, license, or distribution of the performance measures for commercial gain, or incorporation of the performance measures into a product or service that is sold, licensed or distributed for commercial gain. Commercial uses of the performance measures require a license agreement between the user and the AMA, (on behalf of the Consortium) or the ACC or the AHA. Neither the Consortium nor its members shall be responsible for any use of this PPMS.

Ad.11 -13 Additional Information web page URL or attachment: Attachment Testing Summary CAD NQF Final_10_10-634238751140692178.pdf

Date of Submission (MM/DD/YY): 01/20/2011

Rating: C=Completely; P=Partially; M=Minimally; N=Not at all; NA=Not applicable
1c. The measure focus is:
- an outcome (e.g., morbidity, mortality, function, health-related quality of life) that is relevant to, or associated with, a national health goal/priority, the condition, population, and/or care being addressed;  
  OR
- if an intermediate outcome, process, structure, etc., there is **evidence** that supports the specific measure focus as follows:
  - **Intermediate outcome** - evidence that the measured intermediate outcome (e.g., blood pressure, Hba1c) leads to improved health/avoidance of harm or cost/benefit.
  - **Process** - evidence that the measured clinical or administrative process leads to improved health/avoidance of harm and if the measure focus is on one step in a multi-step care process, it measures the step that has the greatest effect on improving the specified desired outcome(s).
  - **Structure** - evidence that the measured structure supports the consistent delivery of effective processes or access that lead to improved health/avoidance of harm or cost/benefit.
  - **Patient experience** - evidence that an association exists between the measure of patient experience of health care and the outcomes, values and preferences of individuals/the public.
  - **Access** - evidence that an association exists between access to a health service and the outcomes of, or experience with, care.
  - **Efficiency** - demonstration of an association between the measured resource use and level of performance with respect to one or more of the other five IOM aims of quality.

2d. Clinically necessary measure exclusions are identified and must be:
- supported by evidence of sufficient frequency of occurrence so that results are distorted without the exclusion; AND
- a clinically appropriate exception (e.g., contraindication) to eligibility for the measure focus; AND
- precisely defined and specified:
  - if there is substantial variability in exclusions across providers, the measure is specified so that exclusions are computable and the effect on the measure is transparent (i.e., impact clearly delineated, such as number of cases excluded, exclusion rates by type of exclusion);
  - if patient preference (e.g., informed decision-making) is a basis for exclusion, there must be evidence that it strongly impacts performance on the measure and the measure must be specified so that the information about patient preference and the effect on the measure is transparent (e.g., numerator category computed separately, denominator exclusion category computed separately).

2e. For outcome measures and other measures (e.g., resource use) when indicated:
- an evidence-based risk-adjustment strategy (e.g., risk models, risk stratification) is specified and is based on patient clinical factors that influence the measured outcome (but not disparities in care) and are present at start of care; OR rationale/data support no risk adjustment.

13 Risk models should not obscure disparities in care for populations by including factors that are associated with differences/inequalities in care such as race, socioeconomic status, gender (e.g., poorer treatment outcomes of African American men with prostate cancer, inequalities in treatment for CVD risk factors between men and women). It is preferable to stratify measures by race and socioeconomic status rather than adjusting out differences.

14 With large enough sample sizes, small differences that are statistically significant may or may not be practically or clinically meaningful. The substantive question may be, for example, whether a statistically significant difference of one percentage point in the percentage of patients who received smoking cessation counseling (e.g., 74% v. 75%) is clinically meaningful; or whether a statistically significant difference of $25 in cost for an episode of care (e.g., $5,000 v. $5,025) is practically meaningful. Measures with overall poor performance may not
