May 4, 2012

Ms. Elisa Munthali
National Quality Forum
1030 15th St, NW, Suite 800
Washington, DC 20005

Dear Ms. Munthali and the Population Health Steering Committee,

We welcome the opportunity to contribute our observations and comments to the National Quality Forum’s (NQF) call for indicators. Over the next 2 years, the California Department of Public Health (CDPH) will be making a considerable effort to research and develop a set of “Healthy Community Indicators” that includes much of the content of the social determinants of health as outlined in the NQF’s commissioned paper authored by Drs. Teutsch and Jacobson. Because our “Healthy Community Indicators” project is just getting off the ground, we do not have a final list of indicators that meets all the NQF’s requirements for submission at this time. Nonetheless, we would like to share our experience, which you may find useful as you go forward.

Frameworks

In the attachments to our March 28, 2012 email, we described the Healthy Community Framework (Table 1) and the months long, grassroots community engagement process that informed the creation of the framework. This framework is the work product of an ongoing Health in All Policies Task Force convened by the California Department of Public Health (CDPH) and composed of high level representatives of 18 non-health state agencies. The task force is part of the Strategic Growth Council, which was created by the California legislature in 2007 to coordinate state efforts on environmental and economic sustainability. In addition to the academic-based socioecologic models used by several California local health departments to describe the health status of their communities, CDPH was also influenced by the Bay Area Health Regional Inequities Initiative (www.barhii.org/programs/download/conceptual_framework.pdf), whose framework is more explicit about the role of institutions and policies in the health inequities than many other frameworks and logic models.
CDPH Draft, Preliminary, Core Indicators

While we have been able to assemble a draft, preliminary, core list of indicators using criteria consistent with criteria NQF uses for its indicators, we have not had sufficient time to vet each or conduct pilot implementation projects with local health departments and other stakeholders on their use in their organizations. The criteria include:

- Validity (measures what it purports to measure)
- Reliability (statistical stability)
- Evidence of a relationship to health outcomes
- Understandable and useable to a broad range of users
- Data source owner that is administratively and/or legally responsible for the content
- Data that are (ideally) frequently updated at 1 to 5 year intervals with a 1- to 3-year lag from current calendar year
- Geographically refined, ideally at the level of a census tract
- Stratifiable by race/ethnicity, income, place, and other covariates for equity analysis
- Consistency with indicators already in use by members of the Health in All Policies Task Force for strategic planning or program evaluation
- Technically feasible given existing resources for data acquisition, geoprocessing, analysis, interpretation, and reporting.

In the following pages (Table 2) we provide side-by-side comparison of our draft, preliminary core list with some of the indicators for the social determinants of health that were suggested as examples in the NQF commissioned paper. In the Call, NQF has stated that priority will assigned to “measures based on existing national, state, or local measurement and planning.” We recognize that it will be challenging for a national project such as yours to harmonize indicators when state or local data without a national equivalent are preferred by state or local organizations because of real or perceived advantages due to data quality, geographic refinement, or their use in existing business processes.

Please do not hesitate to contact me (Neil.Maizlish@cdph.ca.gov) if you have any questions or comments. As our project moves forward, we will gladly share our progress with you and we welcome your feedback and opportunities like this for a mutual exchange of information.

Sincerely,

Neil Maizlish, PhD, MPH
Epidemiologist,
Center for Chronic Disease Prevention and Health Promotion
Table 1. What is a Healthy Community?

A Healthy Community provides for the following through all stages of life:

► Meets basic needs of all
  • Safe, sustainable, accessible and affordable transportation options
  • Affordable, accessible and nutritious foods and safe drinkable water
  • Affordable, high quality, socially integrated and location-efficient housing
  • Affordable, accessible and high quality health care
  • Complete and livable communities including quality schools, parks and recreational facilities, child care, libraries, financial services and other daily needs
  • Access to affordable and safe opportunities for physical activity
  • Able to adapt to changing environments, resilient, and prepared for emergencies
  • Opportunities for engagement with arts, music and culture

► Quality and sustainability of environment
  • Clean air, soil and water, and environments free of excessive noise
  • Tobacco- and smoke-free
  • Green and open spaces, including healthy tree canopy and agricultural lands
  • Minimized toxics, greenhouse gas emissions and waste
  • Affordable and sustainable energy use
  • Aesthetically pleasing

► Adequate levels of economic, social development
  • Living wage, safe and healthy job opportunities for all, and a thriving economy
  • Support for healthy development of children and adolescents
  • Opportunities for high quality and accessible education

► Health and social equity

► Social relationships that are supportive and respectful
  • Robust social and civic engagement
  • Socially cohesive and supportive relationships, families, homes and neighborhoods
  • Safe communities, free of crime and violence

**Table 2.** Indicators Used to Assess the Determinants of Health: Examples from NQF Commissioned Paper and CDPH Preliminary, Draft Core List (4/6/2011)
