

Measure Information

This document contains the information submitted by measure developers/stewards, but is organized according to NQF's measure evaluation criteria and process. The item numbers refer to those in the submission form but may be in a slightly different order here. In general, the item numbers also reference the related criteria (e.g., item 1b.1 relates to sub criterion 1b).

Brief Measure Information

NQF #: 0560

Corresponding Measures:

De.2. Measure Title: HBIPS-5 Patients discharged on multiple antipsychotic medications with appropriate justification

Co.1.1. Measure Steward: The Joint Commission

De.3. Brief Description of Measure: The proportion of patients, age greater than and equal to 1 year, discharged from a hospital-based inpatient psychiatric setting on two or more antipsychotic medications with appropriate justification.

1b.1. Developer Rationale: Research studies have found that 4-35% of outpatients and 30-50% of inpatients treated with an antipsychotic medication concurrently received 2 or more antipsychotics (Covell, Jackson, Evans, & Essock, 2002; Ganguly, Kotzan, Miller, Kennedy, & Martin, 2004; Gilmer, Dolder, Folsom, Mastin, & Jeste, 2007; Kreyenbuhl, Valenstein, McCarthy, Ganocy, & Blow, 2006; Stahl & Grady, 2004). One study reported 4.6% of patients concurrently received 3 or more antipsychotics (Jaffe & Levine, 2003). These findings are seen across diverse sectors: state mental health authorities, the Veterans Health System and Medicaid-financed care. Antipsychotic polypharmacy can lead to greater side effects, often without improving clinical outcomes (Ananth, Parameswaran, & Gunatilake, 2004; Stahl & Grady, 2004). As a result, a range of stakeholders have called for efforts to reduce unnecessary use of multiple antipsychotics (Centorrino, Gören, Hennen, Salvatore, Kelleher, & Baldessarini, 2004; Gilmer, Dolder, Folsom, Mastin, & Jeste, 2007; National Association of State Mental Health Program Directors, 2001; University HealthSystem Consortium, 2006). Practice guidelines recommend the use of a second antipsychotic only after multiple trials of a single antipsychotic have proven inadequate (American Psychiatric Association [APA] Practice Guidelines, 2004). Randomized controlled trials (RCTs) provide some evidence to support augmentation with a second antipsychotic in treatment resistant patients. Most of these studies were limited to augmentation of clozapine with another second-generation antipsychotic (Tranulis, Skalli, Lalonde, & Nicole, 2008). Among patients without a documented history of previous treatment failures of antipsychotic monotherapy, multiple RCTs and other controlled trials failed to show a benefit of antipsychotic polypharmacy over monotherapy (Ananth, Parameswaran, & Gunatilake, 2004; Centorrino, Gören, Hennen, Salvatore, Kelleher, & Baldessarini, 2004; Potkin, Thyrum, Alva, Bera, Yeh, & Arvanitis, 2002; Shim et al., 2007; Stahl, & Grady, 2004). Clinical circumstances, such as shorter inpatient stays, may require hospitals to discharge a patient on multiple antipsychotics with an aftercare plan to transition to monotherapy. In such cases, effective communication between the inpatient and aftercare clinician is an essential element of care.

As stated above, recent literature supports three appropriate justifications for prescribing multiple antipsychotic medications: previous failed trials of monotherapy, cross-tapering to monotherapy and augmentation of clozapine. A review of the justifications for prescribing more than one antipsychotic medication will help hospitals determine if their practice is supported by the evidence-base.

The measure will assist health care organizations (HCOs) to track the number of patients prescribed two or more antipsychotic medications at the time of discharge with appropriate justification.

S.4. Numerator Statement: Psychiatric inpatients discharged on two or more routinely scheduled antipsychotic medications with appropriate justification.

S.6. Denominator Statement: Psychiatric inpatient discharges

S.8. Denominator Exclusions: • Patients who expired

- Patients with an unplanned departure resulting in discharge due to elopement
- Patients with an unplanned departure resulting in discharge due to failing to return from leave
- Patients with a length of stay less than or equal to 3 days

IF this measure is included in a composite, NQF Composite#/title:

IF this measure is paired/grouped, NQF#/title:

De.4. IF PAIRED/GROUPED, what is the reason this measure must be reported with other measures to appropriately interpret results? [Not applicable](#)

1. Evidence, Performance Gap, Priority – Importance to Measure and Report

Extent to which the specific measure focus is evidence-based, important to making significant gains in healthcare quality, and improving health outcomes for a specific high-priority (high-impact) aspect of healthcare where there is variation in or overall less-than-optimal performance. ***Measures must be judged to meet all sub criteria to pass this criterion and be evaluated against the remaining criteria.***

1a. Evidence to Support the Measure Focus – See attached Evidence Submission Form

[0560_evidence_attachment_7.1_HBIPS5-636840321120368547.docx](#)

1a.1 For Maintenance of Endorsement: Is there new evidence about the measure since the last update/submission?

Do not remove any existing information. If there have been any changes to evidence, the Committee will consider the new evidence. Please use the most current version of the evidence attachment (v7.1). Please use red font to indicate updated evidence.

[No](#)

1b. Performance Gap

Demonstration of quality problems and opportunity for improvement, i.e., data demonstrating:

- considerable variation, or overall less-than-optimal performance, in the quality of care across providers; and/or
- Disparities in care across population groups.

1b.1. Briefly explain the rationale for this measure (e.g., how the measure will improve the quality of care, the benefits or improvements in quality envisioned by use of this measure)

If a COMPOSITE (e.g., combination of component measure scores, all-or-none, any-or-none), SKIP this question and answer the composite questions.

Research studies have found that 4-35% of outpatients and 30-50% of inpatients treated with an antipsychotic medication concurrently received 2 or more antipsychotics (Covell, Jackson, Evans, & Essock, 2002; Ganguly, Kotzan, Miller, Kennedy, & Martin, 2004; Gilmer, Dolder, Folsom, Mastin, & Jeste, 2007; Kreyenbuhl, Valenstein, McCarthy, Ganocy, & Blow, 2006; Stahl & Grady, 2004). One study reported 4.6% of patients concurrently received 3 or more antipsychotics (Jaffe & Levine, 2003). These findings are seen across diverse sectors: state mental health authorities, the Veterans Health System and Medicaid-financed care. Antipsychotic polypharmacy can lead to greater side effects, often without improving clinical outcomes (Ananth, Parameswaran, & Gunatilake, 2004; Stahl & Grady, 2004). As a result, a range of stakeholders have called for efforts to reduce unnecessary use of multiple antipsychotics (Centorrino, Gören, Hennen, Salvatore, Kelleher, & Baldessarini, 2004; Gilmer, Dolder, Folsom, Mastin, & Jeste, 2007; National Association of State Mental Health Program Directors, 2001; University HealthSystem Consortium, 2006). Practice guidelines recommend the use of a second antipsychotic only after multiple trials of a single antipsychotic have proven inadequate (American Psychiatric Association [APA] Practice Guidelines, 2004). Randomized controlled trials (RCTs) provide some evidence to support augmentation with a second antipsychotic in treatment resistant patients. Most of these studies were limited to augmentation of clozapine with another second-generation antipsychotic (Tranulis, Skalli, Lalonde, & Nicole, 2008). Among patients without a documented history of previous treatment failures of antipsychotic monotherapy, multiple RCTs and other controlled trials failed to show a benefit of antipsychotic polypharmacy over monotherapy (Ananth, Parameswaran, & Gunatilake, 2004; Centorrino, Gören, Hennen, Salvatore, Kelleher, & Baldessarini, 2004; Potkin, Thyrum, Alva, Bera, Yeh, & Arvanitis, 2002; Shim et al., 2007; Stahl, & Grady, 2004). Clinical circumstances, such as shorter inpatient stays, may require hospitals to discharge a patient on multiple antipsychotics with an aftercare plan to transition to monotherapy. In such cases, effective communication between the inpatient and aftercare clinician is an essential element of care.

As stated above, recent literature supports three appropriate justifications for prescribing multiple antipsychotic medications: previous failed trials of monotherapy, cross-tapering to monotherapy and augmentation of clozapine. A review of the justifications for prescribing more than one antipsychotic medication will help hospitals determine if their practice is supported by the evidence-base.

The measure will assist health care organizations (HCOs) to track the number of patients prescribed two or more antipsychotic medications at the time of discharge with appropriate justification.

1b.2. Provide performance scores on the measure as specified (current and over time) at the specified level of analysis. *(This is required for maintenance of endorsement. Include mean, std dev, min, max, interquartile range, scores by decile. Describe the data source including number of measured entities; number of patients; dates of data; if a sample, characteristics of the entities include.) This information also will be used to address the sub-criterion on improvement (4b1) under Usability and Use.*

Below are the data from 2009-2018. The Year of data submission is the first row followed by N, the number of Hospitals that have directly submitted data to the Joint Commission. Descriptive statistics include mean, std. dev, min, max, median, first and 3rd quartiles (Q1 and Q3) along the deciles listed at the 10 percentile (10th pctl), etc.

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	
N	296	316	463	477	505	651	1015	1035	729	688

1b.3. If no or limited performance data on the measure as specified is reported in 1b2, then provide a summary of data from the literature that indicates opportunity for improvement or overall less than optimal performance on the specific focus of measurement.

See data in 1b.2

1b.4. Provide disparities data from the measure as specified (current and over time) by population group, e.g., by race/ethnicity, gender, age, insurance status, socioeconomic status, and/or disability. *(This is required for maintenance of endorsement. Describe the data source including number of measured entities; number of patients; dates of data; if a sample, characteristics of the entities included.) For measures that show high levels of performance, i.e., "topped out", disparities data may demonstrate an opportunity for improvement/gap in care for certain sub-populations. This information also will be used to address the sub-criterion on improvement (4b1) under Usability and Use.*

No disparities were noted in the literature.

For data source see data in 1b.2

The following data are measure rates by population group

Gender	2013	2014	2015	2016	2017
Male	0.541	0.577	0.620	0.617	0.618
Female	0.540	0.591	0.621	0.601	0.623

Hispanic Ethnicity	2013	2014	2015	2016	2017
--------------------	------	------	------	------	------

Hispanic	0.647	0.585	0.658	0.625	0.643	
Non-Hispanic		0.531	0.583	0.618	0.610	0.619
Race	2013	2014	2015	2016	2017	
White	0.522	0.565	0.608	0.602	0.618	
African American	0.541		0.581	0.634	0.636	0.647
American Indian	0.434		0.506	0.534	0.441	0.433
Asian	0.536	0.604	0.683	0.626	0.621	
Pacific Islander	0.539	0.390	0.611	0.530	0.644	
Age Category	2013	2014	2015	2016	2017	
1-12 years	0.575	0.562	0.584	0.628	0.434	
13-17 years	0.505	0.522	0.590	0.588	0.509	
18-64 years	0.537	0.569	0.631	0.620	0.632	
65+ years	0.463	0.512	0.563	0.561	0.594	

1b.5. If no or limited data on disparities from the measure as specified is reported in 1b.4, then provide a summary of data from the literature that addresses disparities in care on the specific focus of measurement. Include citations. Not necessary if performance data provided in 1b.4

Not Applicable

2. Reliability and Validity—Scientific Acceptability of Measure Properties

Extent to which the measure, as specified, produces consistent (reliable) and credible (valid) results about the quality of care when implemented. **Measures must be judged to meet the sub criteria for both reliability and validity to pass this criterion and be evaluated against the remaining criteria.**

2a.1. Specifications The measure is well defined and precisely specified so it can be implemented consistently within and across organizations and allows for comparability. eMeasures should be specified in the Health Quality Measures Format (HQMF) and the Quality Data Model (QDM).

De.5. Subject/Topic Area (check all the areas that apply):

De.6. Non-Condition Specific(check all the areas that apply):

Safety, Safety : Medication, Safety : Overuse

De.7. Target Population Category (Check all the populations for which the measure is specified and tested if any):

Elderly

S.1. Measure-specific Web Page (Provide a URL link to a web page specific for this measure that contains current detailed specifications including code lists, risk model details, and supplemental materials. Do not enter a URL linking to a home page or to general information.)

<https://manual.jointcommission.org/releases/TJC2018B1/HospitalBasedInpatientPsychiatricServices.html>

S.2a. If this is an eMeasure, HQMF specifications must be attached. Attach the zipped output from the eMeasure authoring tool (MAT) - if the MAT was not used, contact staff. (Use the specification fields in this online form for the plain-language description of the specifications)

This is not an eMeasure Attachment:

S.2b. Data Dictionary, Code Table, or Value Sets (and risk model codes and coefficients when applicable) must be attached. (Excel or csv file in the suggested format preferred - if not, contact staff)

Attachment Attachment: HBIPS_Code_Tables_Med_-636794264289743033.xlsx

S.2c. Is this an instrument-based measure (i.e., data collected via instruments, surveys, tools, questionnaires, scales, etc.)? Attach copy of instrument if available.

No, this is not an instrument-based measure Attachment:

S.2d. Is this an instrument-based measure (i.e., data collected via instruments, surveys, tools, questionnaires, scales, etc.)? Attach copy of instrument if available.

Not an instrument-based measure

S.3.1. For maintenance of endorsement: Are there changes to the specifications since the last updates/submission. If yes, update the specifications for S1-2 and S4-22 and explain reasons for the changes in S3.2.

Yes

S.3.2. For maintenance of endorsement, please briefly describe any important changes to the measure specifications since last measure update and explain the reasons.

Denominator statement changed from: Psychiatric inpatients discharged on two or more routinely scheduled antipsychotic medications to: Psychiatric inpatient discharges.

Reason for change: patients discharged on on two or more antipsychotic medications were previously identified in the HBIPS-4 measure - Patients Discharged on Multiple Antipsychotic Medications. HBIPS-4 was retired effective January 1, 2016.

Data element: Patient Referral to Next Level of Care Provider removed January 1, 2016. Replaced with data element: Patient Status at Discharge

Reason for change: HBIPS-6 - Post Discharge Continuing Care Plan Created and HBIPS-7 - Continuing Care Plan Transmitted to the Next Level of Care Provider upon Discharge were retired January 1, 2016. New data element Patient Status at Discharge takes into account circumstances in which patient is discharged abruptly or outside the plan of care.

Appendix C Medication Table 10.0 (Antipsychotic Medications) was updated July 1, 2016 and January 1, 2017 with the addition of new antipsychotic medications.

The ICD-10-CM code table for Mental Disorders was revised to reflect the ICD-10 code updates for Fiscal Year (FY) 2019, effective for discharges October 1, 2018.

S.4. Numerator Statement (Brief, narrative description of the measure focus or what is being measured about the target population, i.e., cases from the target population with the target process, condition, event, or outcome) DO NOT include the rationale for the measure.

IF an OUTCOME MEASURE, state the outcome being measured. Calculation of the risk-adjusted outcome should be described in the calculation algorithm (S.14).

Psychiatric inpatients discharged on two or more routinely scheduled antipsychotic medications with appropriate justification.

S.5. Numerator Details (All information required to identify and calculate the cases from the target population with the target process, condition, event, or outcome such as definitions, time period for data collection, specific data collection items/responses, code/value sets – Note: lists of individual codes with descriptors that exceed 1 page should be provided in an Excel or csv file in required format at S.2b)

IF an OUTCOME MEASURE, describe how the observed outcome is identified/counted. Calculation of the risk-adjusted outcome should be described in the calculation algorithm (S.14).

One data element is used to calculate the numerator:

Appropriate Justification for Multiple Antipsychotic Medications - Documentation in the medical record of appropriate justification for discharging the patient on two or more routine antipsychotic medications. Allowable values: 1. The medical record contains documentation of a history of a minimum of three failed multiple trials of monotherapy. 2. The medical record contains documentation of a recommended plan to taper to monotherapy due to previous use of multiple antipsychotic medications OR documentation of a cross-taper in progress at the time of discharge. 3. The medical record contains documentation of augmentation of Clozapine. 4. The medical record contains documentation of a justification other than those listed in Allowable Values 1-3. 5. The medical record does not contain documentation supporting the reason for being discharged on two or more antipsychotic medications OR unable to determine from medical record documentation.

Patients are eligible for the numerator population when they are discharged on two or more routinely scheduled antipsychotic medications with appropriate justification.

S.6. Denominator Statement (Brief, narrative description of the target population being measured)

Psychiatric inpatient discharges

S.7. Denominator Details (All information required to identify and calculate the target population/denominator such as definitions, time period for data collection, specific data collection items/responses, code/value sets – Note: lists of individual codes with descriptors that exceed 1 page should be provided in an Excel or csv file in required format at S.2b.)

IF an OUTCOME MEASURE, describe how the target population is identified. Calculation of the risk-adjusted outcome should be described in the calculation algorithm (S.14).

Included populations:

Patients with ICD-10-CM Principal or Other Diagnosis Codes for Mental Disorders as defined in Appendix A, Table 10.01 (See S.2b.) discharged on two or more routinely scheduled antipsychotic medications (refer to Appendix C, Table 10.0- Antipsychotic Medications).

Nine data elements are used to calculate the denominator:

1. Admission Date - The month, day and year of admission to acute inpatient care.
2. Birthdate - The month, day and year the patient was born.
3. Discharge Date – The month day and year the patient was discharged from acute care, left against medical advice or expired during the stay.
4. Discharge Disposition- The patient’s discharge disposition. Allowable values: 1. Home, 2. Hospice – Home, 3. Hospice – Health Care Facility, 4. Acute Care Facility, 5. Other Health Care Facility, 6. Expired, 7. Left Against Medical Advice/AMA, 8 Not Documented or Unable to Determine (UTD).
5. ICD-10-CM Other Diagnosis Codes- The other or secondary (ICD-10-CM) codes associated with the diagnosis for this hospitalization.
6. ICD-10-CM Principal Diagnosis Code- The ICD-10-CM diagnosis code that is primarily responsible for the admission of the patient to the hospital for care during this hospitalization.
7. Number of Antipsychotic Medications Prescribed at Discharge- The number of routinely scheduled antipsychotic medications prescribed to the patient at discharge as documented in the medical record. Allowable values: 0-99, UTD (Unable to determine)
8. Patient Status at Discharge - Documentation in the medical record of the patient’s status at the time the patient left the hospital-based inpatient psychiatric care setting. Allowable values: 1 The medical record contains documentation that the patient was discharged from the inpatient psychiatric care setting under these circumstances:
 - Patient is leaving the psychiatric unit within the acute care hospital AND the hospital facility completely.
 - Patient is leaving the freestanding inpatient psychiatric facility completely.2 The medical record contains documentation of one of the following:
 - The patient eloped and was discharged
 - The patient failed to return from leave and was discharged
 - The patient has not yet been discharged from the hospital
 - The patient was transferred/discharged from the inpatient psychiatric unit in an acute care setting to another level of care, (i.e. medical unit), and subsequently discharged from that level of care3 Unable to determine from medical record documentation.
9. Psychiatric Care Setting - Documentation in the medical record that the patient was receiving care primarily for a psychiatric diagnosis in an inpatient psychiatric setting, i.e., a psychiatric unit of an acute care hospital or a free-standing psychiatric hospital. Allowable values: Yes, No.

Populations: Discharges with Table 10.01 Mental Disorders in the Psychiatric Care Setting who were discharged on two or more routinely scheduled antipsychotic medications on Table 10.0.

S.8. Denominator Exclusions (Brief narrative description of exclusions from the target population)

- Patients who expired
- Patients with an unplanned departure resulting in discharge due to elopement
- Patients with an unplanned departure resulting in discharge due to failing to return from leave
- Patients with a length of stay less than or equal to 3 days

S.9. Denominator Exclusion Details (All information required to identify and calculate exclusions from the denominator such as definitions, time period for data collection, specific data collection items/responses, code/value sets – Note: lists of individual codes with descriptors that exceed 1 page should be provided in an Excel or csv file in required format at S.2b.)

- Patients who expired are identified by the data element Discharge Disposition.
- Patients with an unplanned departure resulting in discharge due to elopement, failing to return from leave are identified by the data element Patient Status at Discharge.
- Length of stay (LOS) in days is equal to the Discharge Date minus the Admission Date. If the LOS is equal to or less than 3 days the patient is excluded.

S.10. Stratification Information (Provide all information required to stratify the measure results, if necessary, including the stratification variables, definitions, specific data collection items/responses, code/value sets, and the risk-model covariates and coefficients for the clinically-adjusted version of the measure when appropriate – Note: lists of individual codes with descriptors that exceed 1 page should be provided in an Excel or csv file in required format with at S.2b.)

The measure is stratified by the following age groups:

- Children (1 through 12 years) — A Patient Age at Discharge (Discharge Date minus Birthdate) greater than or = 1 year and less than 13 years
- Adolescent (13 through 17 years) — A Patient Age at Discharge (Discharge Date minus Birthdate) greater than or = 13 years and less than 18 years
- Adult (18 through 64 years) - A Patient Age at Discharge (Discharge Date minus Birthdate) greater than or = 18 years and less than 65 years
- Older Adult (65 years or greater) - A Patient Age at Discharge (Discharge Date minus Birthdate) greater than or = 65 years

S.11. Risk Adjustment Type (Select type. Provide specifications for risk stratification in measure testing attachment)

No risk adjustment or risk stratification

If other:

S.12. Type of score:

Rate/proportion

If other:

S.13. Interpretation of Score (Classifies interpretation of score according to whether better quality is associated with a higher score, a lower score, a score falling within a defined interval, or a passing score)

Better quality = Higher score

S.14. Calculation Algorithm/Measure Logic (Diagram or describe the calculation of the measure score as an ordered sequence of steps including identifying the target population; exclusions; cases meeting the target process, condition, event, or outcome; time period for data, aggregating data; risk adjustment; etc.)

1. Run cases that are included in the Initial Patient Population for HBIPS-1,5 and pass the edits defined in the Transmission Data Processing Flow: Clinical through this measure.

2. Calculate Length of Stay. Length of Stay, in days, is equal to the Discharge Date minus the Admission Date.

3. Check Length of Stay

- a. If Length of Stay is less than or equal 3 days, the case will proceed to a Measure Category Assignment of B for Overall Rate (HBIPS-5a) and will not be in the measure population. Continue processing and proceed to step 10 and initialize the Measure Category Assignment for each strata measure.
- b. If Length of Stay is greater than 3 days, continue processing and proceed to Discharge Status.

4. Check Discharge Disposition

- a. If Discharge Disposition is missing, the case will proceed to a Measure Category Assignment of X for Overall Rate (HBIPS-5a) and will be rejected. Continue processing and proceed to step 10 and Initialize the Measure Category Assignment for each strata measure.
- b. If Discharge Disposition equals 6, the case will proceed to a Measure Category Assignment of B for Overall Rate (HBIPS-5a) and will not be in the measure population. Continue processing and proceed to step 10 and initialize the Measure Category Assignment for each strata measure.
- c. Discharge Disposition equals 1, 2, 3, 4, 5, 7, or 8, continue processing and proceed to Psychiatric Care Setting.

5. Check Psychiatric Care Setting

- a. If Psychiatric Care Setting equals No, the case will proceed to a Measure Cat Category Assignment of B for Overall Rate (HBIPS-5a) and will not be in the measure population. Continue processing and proceed to step 10 and initialize the Measure Category Assignment for each strata measure.
- b. If Psychiatric Care Setting is missing, the case will proceed to a Measure Category Assignment of X for Overall Rate (HBIPS-5a) and will be rejected. Continue processing and proceed to step 10 and Initialize the Measure Category Assignment for each strata measure.
- c. If Psychiatric Care Setting equals Yes, the case will proceed to Patient Status at Discharge.

6. Check Patient Status at Discharge

- a. If Patient Status at Discharge is missing, the case will proceed to a Measure Category Assignment of X for Overall Rate (HBIPS-5a) and will be rejected. Continue processing and proceed to step 10 and Initialize the Measure Category Assignment for each strata measure.
- b. If Patient Status at Discharge equals 2, the case will proceed to a Measure Category Assignment of B for Overall Rate (HBIPS-5a) and will not be in the measure population. Continue processing and proceed to step 10 and initialize the Measure Category Assignment for each strata measure.
- c. If Patient Status at Discharge equals 1 or 3, the case will continue processing and proceed to Number of Antipsychotic Medications Prescribed at Discharge.

7. Check Number of Antipsychotic Medications Prescribed at Discharge

- a. If Number of Antipsychotic Medications Prescribed at Discharge is missing, the case will proceed to a Measure Category Assignment of X for Overall Rate (HBIPS-5a) and will be rejected. Continue processing and proceed to step 10 and Initialize the Measure Category Assignment for each strata measure.
- b. If Number of Antipsychotic Medications Prescribed at Discharge is less than or equal 1, the case will proceed to a Measure Category Assignment of B for Overall Rate (HBIPS-5a) and will not be in the measure population. Continue processing and proceed to step 10 and initialize the Measure Category Assignment for each strata measure.
- c. If Number of Antipsychotic Medications Prescribed at Discharge is greater than or equal 2 or equal UTD, the case will continue processing and proceed to Number of Antipsychotic Medications Prescribed at Discharge.

8. Check Number of Antipsychotic Medications Prescribed at Discharge

- a. If Number of Antipsychotic Medications Prescribed at Discharge equals UTD, the case will proceed to a Measure Category Assignment of D for Overall Rate (HBIPS-5a) and will be in the measure population. Continue processing and proceed to step 10 and initialize the Measure Category Assignment for each strata measure.
- b. If Number of Antipsychotic Medications Prescribed at Discharge is greater than or equal 2, the case will proceed to Appropriate Justification for Multiple Antipsychotic Medications.

9. Check Appropriate Justification for Multiple Antipsychotic Medications

- a. If Appropriate Justification for Multiple Antipsychotic Medications is missing, the case will proceed to a Measure Category

Assignment of X for Overall Rate (HBIPS-5a) and will be rejected. Continue processing and proceed to step 10 and Initialize the Measure Category Assignment for each strata measure.

b. If Appropriate Justification for Multiple Antipsychotic Medications equals 4 or 5, the case will proceed to a Measure Category Assignment of D for Overall Rate (HBIPS-5a) and will be in the measure population. Continue processing and proceed to step 10 and initialize the Measure Category Assignment for each strata measure.

c. If Appropriate Justification for Multiple Antipsychotic Medications equals 1, 2 or 3, the case will proceed to a Measure Category Assignment of E for Overall Rate (HBIPS-5a) and will be in the numerator population. Continue processing and proceed to step 10 and initialize the Measure Category Assignment for each strata measure.

10. Initialize the Measure Category Assignment for each strata measure (b-e) = 'B'. Do not change the Measure Category Assignment that was already calculated for the overall rate (HBIPS-5a). The rest of the algorithm will reset the appropriate Measure Category Assignment to be equal to the overall rate's (HBIPS-5a) Measure Category Assignment.

11. Check Overall Rate Category Assignment

- a. If Overall Rate Category Assignment equals B, Set the Measure Category Assignment for the strata measures (HBIPS-5b through HBIPS-5e) = 'B'. Stop processing.
- b. If Overall Rate Category Assignment equals D or E or X, continue processing and proceed to Patient Age at Discharge.

12. Check Patient Age at Discharge

- a. If Patient Age at Discharge is greater than or equal 1 years and less than 13 years, set the Measure Category Assignment for measure HBIPS-5b = Measure Category Assignment for measure HBIPS-5a. Stop processing.
- b. If is greater than or equal 13 years, continue processing and proceed to Patient Age at Discharge.

13. Check Patient Age at Discharge

- a. If Patient Age at Discharge is greater than or equal 13 years and less than 18 years, set the Measure Category Assignment for measure HBIPS-5c = Measure Category Assignment for measure HBIPS-5a. Stop processing.
- b. If Patient Age at Discharge is greater than or equal 18 years, continue processing and proceed to Patient Age at Discharge.

14. Check Patient Age at Discharge

- a. If Patient Age at Discharge is greater than or equal 18 years and less than 65 years, set the Measure Category Assignment for measure HBIPS-5d = Measure Category Assignment for measure HBIPS-5a. Stop processing.
- b. If Patient Age at Discharge is greater than or equal 65 years, set the Measure Category Assignment for measure HBIPS-5e = Measure Category Assignment for measure HBIPS-5a. Stop processing.

S.15. Sampling (If measure is based on a sample, provide instructions for obtaining the sample and guidance on minimum sample size.)

IF an instrument-based performance measure (e.g., PRO-PM), identify whether (and how) proxy responses are allowed.

Hospitals that choose to sample have the option of sampling quarterly or sampling monthly. A hospital may choose to use a larger sample size than is required. Hospitals whose Initial Patient Population size is less than the minimum number of cases per quarter/month for the stratum cannot sample that stratum.

Regardless of the option used, hospital samples must be monitored to ensure that sampling procedures consistently produce statistically valid and useful data. Due to exclusions, hospitals selecting sample cases MUST submit AT LEAST the minimum required sample size.

Quarterly Sampling

For hospitals selecting sample cases for the HBIPS discharge measures, a modified sampling procedure is required. Hospitals selecting sample cases for this set must ensure that each individual stratum's population and effective quarterly sample size meet the following conditions:

- Select within each of the four individual measure strata. The effective quarterly sample size within a stratum is at least 44 cases per quarter. Cases are placed into the appropriate stratum based upon the patient's age.
- The required quarterly sample size is at least 20% of the stratum population for the quarter.

Quarterly Sample Size

Based on Initial Patient Population for the HBIPS Discharge Measures

Average Quarterly	Minimum Required
Stratum Initial Patient Population Size	Stratum Sample Size

> 877	176
221-877	20% of Initial Patient Population size
44-220	44
< 44	No sampling; 100% Initial Patient Population required

Monthly Sampling
Hospitals selecting sample cases for this set must ensure that each individual stratum population and effective monthly sample size meet the following conditions:

- Select within each of the four individual measure strata. The effective monthly sample size within a stratum is at least 15 cases per month. Cases are placed into the appropriate stratum based upon the patient's age.
- The required monthly sample size is at least 20% of the stratum population for the month.

Monthly Sample Size
Based on Initial Patient Population Size for the HBIPS Measure Set

Average Monthly Stratum Initial Patient Population Size	Minimum Required Stratum Sample Size
--	---

> 295	60
76-295	20% of Initial Patient Population size
15-75	15
< 15	No sampling; 100% Initial Patient Population required

S.16. Survey/Patient-reported data (If measure is based on a survey or instrument, provide instructions for data collection and guidance on minimum response rate.)
Specify calculation of response rates to be reported with performance measure results.
Not applicable

S.17. Data Source (Check ONLY the sources for which the measure is SPECIFIED AND TESTED).
If other, please describe in S.18.
Electronic Health Records, Paper Medical Records

S.18. Data Source or Collection Instrument (Identify the specific data source/data collection instrument (e.g. name of database, clinical registry, collection instrument, etc., and describe how data are collected.)
If instrument-based, identify the specific instrument(s) and standard methods, modes, and languages of administration.
Each data element in the data dictionary includes suggested data sources. The data are collected using contracted Performance Measurement Systems (vendors) that develop data collection tools based on the measure specifications. The tools are verified and tested by Joint Commission staff to confirm the accuracy and conformance of the data collection tool with the measure specifications. The vendor may not offer the measure set to hospitals until verification has been passed.

S.19. Data Source or Collection Instrument (available at measure-specific Web page URL identified in S.1 OR in attached appendix at A.1)
No data collection instrument provided

S.20. Level of Analysis (Check ONLY the levels of analysis for which the measure is SPECIFIED AND TESTED)
Facility, Other

S.21. Care Setting (Check ONLY the settings for which the measure is SPECIFIED AND TESTED)
Inpatient/Hospital
If other:

S.22. COMPOSITE Performance Measure - Additional Specifications (Use this section as needed for aggregation and weighting rules, or calculation of individual performance measures if not individually endorsed.)
Not applicable

2. Validity – See attached Measure Testing Submission Form

0560_MeasureTesting_7.1_HBIPS5-636910248175439638.docx

2.1 For maintenance of endorsement

Reliability testing: If testing of reliability of the measure score was not presented in prior submission(s), has reliability testing of the measure score been conducted? If yes, please provide results in the Testing attachment. Please use the most current version of the testing attachment (v7.1). Include information on all testing conducted (prior testing as well as any new testing); use red font to indicate updated testing.

No

2.2 For maintenance of endorsement

Has additional empirical validity testing of the measure score been conducted? If yes, please provide results in the Testing attachment. Please use the most current version of the testing attachment (v7.1). Include information on all testing conducted (prior testing as well as any new testing); use red font to indicate updated testing.

Yes

2.3 For maintenance of endorsement

Risk adjustment: For outcome, resource use, cost, and some process measures, risk-adjustment that includes social risk factors is not prohibited at present. Please update sections 1.8, 2a2, 2b1,2b4.3 and 2b5 in the Testing attachment and S.140 and S.11 in the online submission form. NOTE: These sections must be updated even if social risk factors are not included in the risk-adjustment strategy. You MUST use the most current version of the Testing Attachment (v7.1) -- older versions of the form will not have all required questions.

No - This measure is not risk-adjusted

3. Feasibility

Extent to which the specifications including measure logic, require data that are readily available or could be captured without undue burden and can be implemented for performance measurement.

3a. Byproduct of Care Processes

For clinical measures, the required data elements are routinely generated and used during care delivery (e.g., blood pressure, lab test, diagnosis, medication order).

3a.1. Data Elements Generated as Byproduct of Care Processes.

generated by and used by healthcare personnel during the provision of care, e.g., blood pressure, lab value, medical condition, Coded by someone other than person obtaining original information (e.g., DRG, ICD-9 codes on claims), Abstracted from a record by someone other than person obtaining original information (e.g., chart abstraction for quality measure or registry)

If other:

3b. Electronic Sources

The required data elements are available in electronic health records or other electronic sources. If the required data are not in electronic health records or existing electronic sources, a credible, near-term path to electronic collection is specified.

3b.1. To what extent are the specified data elements available electronically in defined fields (i.e., data elements that are needed to compute the performance measure score are in defined, computer-readable fields) Update this field for maintenance of endorsement.

Some data elements are in defined fields in electronic sources

3b.2. If ALL the data elements needed to compute the performance measure score are not from electronic sources, specify a credible, near-term path to electronic capture, OR provide a rationale for using other than electronic sources. For maintenance of endorsement, if this measure is not an eMeasure (eCQM), please describe any efforts to develop an eMeasure (eCQM).

Although The Joint Commission had intended to pursue the process to convert this measure to an electronic quality measure (eCQM), this has not occurred for the following reasons:

- The adoption of eCQMs may be difficult for free-standing psychiatric facilities because the electronic medical record (EMR) has not been consistently integrated across these facilities.

- It has been the experience of The Joint Commission that it can be difficult and resource intensive to successfully re-engineer a chart-based measure to an eCQM as opposed to new eCQM development.

3b.3. If this is an eMeasure, provide a summary of the feasibility assessment in an attached file or make available at a measure-specific URL. Please also complete and attach the NQF Feasibility Score Card.

Attachment:

3c. Data Collection Strategy

Demonstration that the data collection strategy (e.g., source, timing, frequency, sampling, patient confidentiality, costs associated with fees/licensing of proprietary measures) can be implemented (e.g., already in operational use, or testing demonstrates that it is ready to put into operational use). For eMeasures, a feasibility assessment addresses the data elements and measure logic and demonstrates the eMeasure can be implemented or feasibility concerns can be adequately addressed.

3c.1. Required for maintenance of endorsement. Describe difficulties (as a result of testing and/or operational use of the measure) regarding data collection, availability of data, missing data, timing and frequency of data collection, sampling, patient confidentiality, time and cost of data collection, other feasibility/implementation issues.

IF instrument-based, consider implications for both individuals providing data (patients, service recipients, respondents) and those whose performance is being measured.

Hospitals using this performance measure generally collect measure data via manual review of the paper medical record. Collected data are submitted to The Joint Commission on a quarterly basis, by way of contracted performance measurement system vendors, as described previously. Specifications for this measure are freely available to anyone who wishes to use the measure. Feedback from hospitals using this measure indicates that required data elements are generally available in the medical record, and measure specifications are robust and easy to understand. If feedback from measure users has indicated the need for clarification or revision of measure specifications, this has taken place.

3c.2. Describe any fees, licensing, or other requirements to use any aspect of the measure as specified (e.g., value/code set, risk model, programming code, algorithm).

Not applicable, there are no fees, licensing, or other requirements.

4. Usability and Use

Extent to which potential audiences (e.g., consumers, purchasers, providers, policy makers) are using or could use performance results for both accountability and performance improvement to achieve the goal of high-quality, efficient healthcare for individuals or populations.

4a. Accountability and Transparency

Performance results are used in at least one accountability application within three years after initial endorsement and are publicly reported within six years after initial endorsement (or the data on performance results are available). If not in use at the time of initial endorsement, then a credible plan for implementation within the specified timeframes is provided.

4.1. Current and Planned Use

NQF-endorsed measures are expected to be used in at least one accountability application within 3 years and publicly reported within 6 years of initial endorsement in addition to performance improvement.

Specific Plan for Use	Current Use (for current use provide URL)

4a1.1 For each CURRENT use, checked above (update for maintenance of endorsement), provide:

- Name of program and sponsor
- Purpose
- Geographic area and number and percentage of accountable entities and patients included
- Level of measurement and setting

• Name of program and sponsor: Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program/Centers for Medicare & Medicaid

Services

- Purpose: The IPFQR Program gives consumers care quality information to help them make more informed decisions about their healthcare options. This includes providing consumers with data about quality measures that aim to assess and foster improvement in the quality of care provided to patients with mental illness.

The IPFQR Program encourages facilities and clinicians to improve the quality of inpatient care. The program helps by making sure providers know about and report on the best practices for their facilities and type of care they give by submitting quality data to CMS annually.

- Geographic area and number and percentage of accountable entities and patients included: United States All IPFs paid under the Inpatient Psychiatric Facilities Prospective Payment System (IPF PPS) have to meet IPFQR Program requirements. As of 12/1/2018, there are 1,635 participating providers in the IPFQR Program.

- Level of measurement and setting: The IPF PPS applies to inpatient psychiatric services given by psychiatric hospitals or psychiatric units (also known as mental health or behavioral health units) in Acute Care Hospitals (ACHs) or Critical Access Hospitals (CAHs) in the United States that participate in Medicare.

- Name of program and sponsor: ORYX Performance Measurement Reporting Program/The Joint Commission

- Purpose: The Joint Commission's ORYX initiative integrates performance measurement data into the accreditation process. ORYX measurement requirements support Joint Commission-accredited organizations in their quality improvement efforts

- Geographic area and number and percentage of accountable entities and patients included: Nationwide; 726 free-standing psychiatric hospitals and hospitals with psychiatric units accredited by The Joint Commission

- Level of measurement and setting: Level of measurement and setting: facility level of measurement, inpatient setting

- Name of program and sponsor: America's Hospitals: Improving Quality and Safety – The Joint Commission's Annual Report 2017/The Joint Commission

- Purpose: The Joint Commission's ORYX initiative integrates performance measurement data into the accreditation process. ORYX measurement requirements support Joint Commission-accredited organizations in their quality improvement efforts

- Geographic area and number and percentage of accountable entities and patients included: Nationwide; 726 free-standing psychiatric hospitals and hospitals with psychiatric units accredited by The Joint Commission

- Level of measurement and setting: Level of measurement and setting: facility level of measurement, inpatient setting

- Name of program and sponsor: ORYX Performance Measurement Report/The Joint Commission

- Purpose: The Joint Commission's ORYX initiative integrates performance measurement data into the accreditation process. ORYX measurement requirements support Joint Commission-accredited organizations in their quality improvement efforts

- Geographic area and number and percentage of accountable entities and patients included: Nationwide; 726 free-standing psychiatric hospitals and hospitals with psychiatric units accredited by The Joint Commission

- Level of measurement and setting: Level of measurement and setting: facility level of measurement, inpatient setting

- Name of program and sponsor: Hospital Accreditation Program/The Joint Commission

- Purpose: The Joint Commission's ORYX initiative integrates performance measurement data into the accreditation process. ORYX measurement requirements support Joint Commission-accredited organizations in their quality improvement efforts

- Geographic area and number and percentage of accountable entities and patients included: Nationwide; 726 free-standing psychiatric hospitals and hospitals with psychiatric units accredited by The Joint Commission

- Level of measurement and setting: Level of measurement and setting: facility level of measurement, inpatient setting

4a1.2. If not currently publicly reported OR used in at least one other accountability application (e.g., payment program, certification, licensing) what are the reasons? (e.g., Do policies or actions of the developer/steward or accountable entities restrict access to performance results or impede implementation?)

Not applicable

4a1.3. If not currently publicly reported OR used in at least one other accountability application, provide a credible plan for implementation within the expected timeframes -- any accountability application within 3 years and publicly reported within 6 years of initial endorsement. (Credible plan includes the specific program, purpose, intended audience, and timeline for implementing the measure within the specified timeframes. A plan for accountability applications addresses mechanisms for data aggregation and reporting.)

Not applicable

4a2.1.1. Describe how performance results, data, and assistance with interpretation have been provided to those being measured or other users during development or implementation.

How many and which types of measured entities and/or others were included? If only a sample of measured entities were included, describe the full population and how the sample was selected.

Measure rates are provided to the hospital via a quarterly ORYX Performance Measure Report. This applies to all entities reporting the measure.

The Joint Commission utilizes an email process for hospital contact related to their measure rates and analysis. Response is provided in a timely manner either by email or directly by phone. Additionally, the data is available publicly through The Joint Commission Quality Check website. Individual hospital data for each rolling yearly time period are viewable and can be downloaded from this website.

4a2.1.2. Describe the process(es) involved, including when/how often results were provided, what data were provided, what educational/explanatory efforts were made, etc.

Patient level data is aggregated at the hospital level quarterly. The hospital Performance Measure Report and Quality Check website are updated. A users guide to the Performance Measure Report is posted on the Joint Commission website. Quality Check includes yearly and quarterly hospital rates, state and national averages, and the top 10 percentile at the national and state level.

4a2.2.1. Summarize the feedback on measure performance and implementation from the measured entities and others described in 4d.1.

Describe how feedback was obtained.

The Joint Commission utilizes an automated feedback system with access available to the measured entities and the vendors contracted by measured entities. A clinical lead is responsible for each individual measure set. The system is monitored on a daily basis and response is provided typically within 8 business hours. If queries cannot be managed via written response, arrangements are made to address any issues or concerns via phone.

4a2.2.2. Summarize the feedback obtained from those being measured.

Queries submitted via the automated feedback system have decreased significantly for the HBIPS measure set in the past 3 years. (522 in 2016, 288 in 2017, 187 for 2018 YTD). There have been no issues with the data elements for this measure and no updates needed to the data element specifications based upon feedback received.

4a2.2.3. Summarize the feedback obtained from other users

Same as above in 4a2.2.2.

4a2.3. Describe how the feedback described in 4a2.2.1 has been considered when developing or revising the measure specifications or implementation, including whether the measure was modified and why or why not.

Note: all feedback is tracked and considered. If upon analysis there are trends noted giving cause for updates, this is reviewed by the measure work-group to confirm the need for revision. Additionally, The Joint Commission engages a Technical Advisory Panel (TAP) that is consulted on an as needed basis for approval of updates that may require their additional expertise. All measure specifications are reviewed twice a year and updates are made as needed based on feedback from the measure users, input from the TAP, or changes in the guidelines.

Modifications to this measure have not been required based upon feedback received.

Improvement

Progress toward achieving the goal of high-quality, efficient healthcare for individuals or populations is demonstrated. If not in use for performance improvement at the time of initial endorsement, then a credible rationale describes how the performance results could be used to further the goal of high-quality, efficient healthcare for individuals or populations.

4b1. Refer to data provided in 1b but do not repeat here. Discuss any progress on improvement (trends in performance results, number and percentage of people receiving high-quality healthcare; Geographic area and number and percentage of accountable entities and patients included.)

If no improvement was demonstrated, what are the reasons? If not in use for performance improvement at the time of initial

endorsement, provide a credible rationale that describes how the performance results could be used to further the goal of high-quality, efficient healthcare for individuals or populations.

Though 2009 to 2nd quarter 2018, a binomial random effects model was used to determine if there was a change in rates over time with time as a fixed effect and healthcare organization as a random effect. The results of the model show statistical significant over time ($P < 0.001$) and an odd ratio estimate of time to be 1.302.

4b2. Unintended Consequences

The benefits of the performance measure in facilitating progress toward achieving high-quality, efficient healthcare for individuals or populations outweigh evidence of unintended negative consequences to individuals or populations (if such evidence exists).

4b2.1. Please explain any unexpected findings (positive or negative) during implementation of this measure including unintended impacts on patients.

Since implementation, the Notes for Abstraction section and the Allowable Value section of the data element for Appropriate Justification for Multiple Antipsychotic Medications has been updated to clarify issues that have been identified after review of the feedback received from measure users. To the best of our knowledge, there have been no reports of unintended consequences. To the best of our knowledge, there have been no unexpected findings and no reports of unintended consequences.

4b2.2. Please explain any unexpected benefits from implementation of this measure.

A study published in July 2018, compared results on psychiatric performance measures among cohorts of hospitals with different characteristics that elected to begin reporting on the HBIPS measures at various points in time.

Quarterly reporting of Hospital-Based Inpatient Psychiatric Services (HBIPS) measures to the Joint Commission was used to examine trends in performance among four hospital cohorts that began reporting in 2009 (N=243), 2011 (N=139), 2014 (N=137), or 2015 (N=372).

Results demonstrated that all cohorts significantly improved across quarters for justification of multiple antipsychotic medications.

5. Comparison to Related or Competing Measures

If a measure meets the above criteria and there are endorsed or new related measures (either the same measure focus or the same target population) or competing measures (both the same measure focus and the same target population), the measures are compared to address harmonization and/or selection of the best measure.

5. Relation to Other NQF-endorsed Measures

Are there related measures (conceptually, either same measure focus or target population) or competing measures (conceptually both the same measure focus and same target population)? If yes, list the NQF # and title of all related and/or competing measures.
No

5.1a. List of related or competing measures (selected from NQF-endorsed measures)

5.1b. If related or competing measures are not NQF endorsed please indicate measure title and steward.

5a. Harmonization of Related Measures

The measure specifications are harmonized with related measures;

OR

The differences in specifications are justified

5a.1. If this measure conceptually addresses EITHER the same measure focus OR the same target population as NQF-endorsed

measure(s):

Are the measure specifications harmonized to the extent possible?

5a.2. If the measure specifications are not completely harmonized, identify the differences, rationale, and impact on interpretability and data collection burden.

[Not applicable](#)

5b. Competing Measures

The measure is superior to competing measures (e.g., is a more valid or efficient way to measure);

OR

Multiple measures are justified.

5b.1. If this measure conceptually addresses both the same measure focus and the same target population as NQF-endorsed measure(s):

Describe why this measure is superior to competing measures (e.g., a more valid or efficient way to measure quality); OR provide a rationale for the additive value of endorsing an additional measure. (Provide analyses when possible.)

[Not applicable](#)

Appendix

A.1 Supplemental materials may be provided in an appendix. All supplemental materials (such as data collection instrument or methodology reports) should be organized in one file with a table of contents or bookmarks. If material pertains to a specific submission form number, that should be indicated. Requested information should be provided in the submission form and required attachments. There is no guarantee that supplemental materials will be reviewed.

The Technical Advisory Panel (TAP) met and identified domains for measurement, endorsed the measurement framework and identified extant measures. After measures were received and evaluated by Joint Commission staff, the TAP met to review the measures and recommend candidate measures to move forward for public comment. Following public comment, the TAP reviewed the comment and recommended a set of measures to move forward for pilot testing. After pilot testing was completed, the TAP reviewed the pilot test results and recommended revisions to the measures for the final measure set.

The TAP remains engaged with The Joint Commission and meets on an as needed basis to offer consultation or to suggest updates relative to guideline changes/recommendations.

Measure Developer/Steward Updates and Ongoing Maintenance

Ad.2 Year the measure was first released: 2008

Ad.3 Month and Year of most recent revision: 01, 2019
