

Measure 701b: Glycemic Control – Hypoglycemia

Denominator Algorithm

Measure 701b: The rate of hypoglycemic events following the administration of an anti-diabetic agent

Denominator: Total number of hospital days with at least one anti-diabetic agent administered

Measure 701b: Glycemic Control – Hypoglycemia

Numerator Algorithm

Measure 701b: The rate of hypoglycemic events following the administration of an anti-diabetic agent

Numerator: Total number of hypoglycemic events (<40 mg/dL) that were preceded by administration of rapid/short-acting insulin within 12 hours or an anti-diabetic agent other than short-acting insulin within 24 hours, were not followed by another glucose value greater than 80 mg/dL within 5 minutes, and were at least 20 hours apart
