

THE NATIONAL QUALITY FORUM

MEASURE SUBMISSION FORM VERSION 3.0

August 2008

The measure information you submit will be shared with NQF’s Steering Committees and Technical Advisory Panels to evaluate measures against the NQF criteria of importance to measure and report, scientific acceptability of measure properties, usability, and feasibility. Four conditions (as indicated below) must be met before proposed measures may be considered and evaluated for suitability as voluntary consensus standards. Not all acceptable measures will be strong—or equally strong—among each set of criteria. The assessment of each criterion is a matter of degree; however, all measures must be judged to have met the first criterion, importance to measure and report, in order to be evaluated against the remaining criteria. References to the specific measure evaluation criteria are provided in parentheses following the item numbers. Please refer to the *Measure Evaluation Criteria* for more information at www.qualityforum.org under Core Documents. Additional guidance is being developed and when available will be posted on the NQF website.

Use the tab or arrow (↓→) keys to move the cursor to the next field (or back ←↑). There are three types of response fields:

- drop-down menus - select one response;
- check boxes - check as many as apply; and
- text fields - you can copy and paste text into these fields or enter text; these fields are not limited in size, but in most cases, we ask that you summarize the requested information.

Please note that URL hyperlinks do not work in the form; you will need to type them into your web browser.

Be sure to answer all questions. Fields that are left blank will be interpreted as no or none. Information must be provided in this form. Attachments are not allowed except when specifically requested or to provide additional detail or source documents for information that is summarized in this form. If you have important information that is not addressed by the questions, they can be entered into item #48 near the end of the form.

For questions about this form, please contact the NQF Project Director listed in the corresponding call for measures.

CONDITIONS FOR CONSIDERATION BY NQF	
	<i>Four conditions must be met before proposed measures may be considered and evaluated for suitability as voluntary consensus standards.</i>
A (A)	<i>Public domain or Intellectual Property Agreement signed: IP Agreement signed and submitted (If no, do not submit) Template for the Intellectual Property Agreement is available at www.qualityforum.org under Core Documents.</i>
B (B)	<i>Measure steward/maintenance: Is there an identified responsible entity and process to maintain and update the measure on a schedule commensurate with clinical innovation, but at least every 3 years? Yes, information provided in contact section (If no, do not submit)</i>
C (C)	<i>Intended use: Does the intended use of the measure include BOTH public reporting AND quality improvement? Yes (If no, do not submit)</i>
D (D)	<i>Fully developed and tested: Is the measure fully developed AND tested? Yes, fully developed and tested (If not tested and no plans for testing within 24 months, do not submit)</i>

THE NATIONAL QUALITY FORUM

MEASURE SUBMISSION FORM VERSION 3.0

August 2008

	<i>(for NQF staff use) NQF Review #: EC-002-08 NQF Project: National Voluntary Consensus Standards for Ambulatory Care Using Clinically Enriched Administrative Data</i>
MEASURE SPECIFICATIONS & DESCRIPTIVE INFORMATION	
1	Information current as of (date- MM/DD/YY): 11/21/08
2	Title of Measure: <i>APPROPRIATE WORK UP PRIOR TO ENDOMETRIAL ABLATION PROCEDURE</i>
3	Brief description of measure ¹: <i>To ensure that all women have endometrial sampling performed before undergoing an endometrial ablation.</i>
4 (2a)	<p>Numerator Statement: <i>Women who received endometrial sampling or hysteroscopy with biopsy during the year prior to the index date.</i></p> <p>Time Window: <i>The year prior to the index date.</i></p> <p>Numerator Details (Definitions, codes with description): <i>Numerator Logic: A or (B and C)</i></p> <p><i>[A] Endometrial sampling or dilation and curettage during the year prior to the index date. CPT-4 Code(s): 58100, 58110, 58120, 58558, 56351*</i></p> <p><i>[B] Hysteroscopy during the year prior to the index date. CPT-4 Code(s): 58555</i></p> <p>AND</p> <p><i>[C] Pathology specimen sent CPT-4 Code(s): 88305 * Code retired, but appropriate for retrospective analysis.</i></p> <p><i>Note: index date is defined as the first instance of denominator criterion A.</i></p>
5 (2a)	<p>Denominator Statement: <i>Continuously enrolled women who had an endometrial ablation procedure during the measurement year.</i></p> <p>Time Window: <i>The measurement year.</i></p> <p>Denominator Details (Definitions, codes with description): <i>[GENDER] Women</i></p> <p><i>[CE] Women who were continuously enrolled during the year prior to the index date.</i></p> <p>A and GENDER and CE</p> <p><i>[A] Women who had an endometrial ablation procedure during the measurement year.</i></p>

¹ Example of measure description: Percentage of adult patients with diabetes aged 18-75 years receiving one or more A1c test(s) per year.
NQF Measure Submission Form, V3.0

	<p>CPT-4 code(s): 56356*, 58353, 58356, 58563, 0009T ICD-9 surgical proc code(s): 68.23 *Code retired, but appropriate for retrospective analysis</p> <p>Note: index date is defined as the first instance of denominator criterion A.</p>										
6 (2a, 2d)	<p>Denominator Exclusions: Women who had an endometrial ablation procedure during the year prior to the index date.</p> <p>Denominator Exclusion Details (Definitions, codes with description): Women who had an endometrial ablation procedure during the year prior to the index date.</p> <p>Denominator Exclusion Logic: A</p> <p>[A] Women who had an endometrial ablation during the year prior to the index date.</p> <p>CPT-4 code(s): 56356, 58353, 58356, 58563, 0009T ICD-9 surgical proc code(s): 68.23</p> <p>Note: index date is defined as the first instance of denominator criterion A.</p>										
7 (2a, 2h)	<p>7 Stratification Do the measure specifications require the results to be stratified? No ► If "other" describe:</p> <p>Identification of stratification variable(s):</p> <p>Stratification Details (Definitions, codes with description):</p>										
8 (2a, 2e)	<p>8 Risk Adjustment Does the measure require risk adjustment to account for differences in patient severity before the onset of care? No ► If yes, (select one) ► Is there a separate proprietary owner of the risk model? (select one)</p> <p>Identify Risk Adjustment Variables:</p> <p>Detailed risk model: attached <input type="checkbox"/> OR Web page URL:</p>										
9 (2a)	<p>9 Type of Score: Rate/proportion Calculation Algorithm: attached <input type="checkbox"/> OR Web page URL:</p> <p>Interpretation of Score (Classifies interpretation of score according to whether better quality is associated with a higher score, a lower score, a score falling within a defined interval, or a passing score) Better quality = Higher score ► If "Other", please describe:</p>										
10 (2a, 4a, 4b)	<p>10 Identify the required data elements(e.g., primary diagnosis, lab values, vital signs): Data dictionary/code table attached <input checked="" type="checkbox"/> OR Web page URL:</p> <p>Data Quality (2a) Check all that apply</p> <p><input type="checkbox"/> Data are captured from an authoritative/accurate source (e.g., lab values from laboratory personnel) <input checked="" type="checkbox"/> Data are coded using recognized data standards <input type="checkbox"/> Method of capturing data electronically fits the workflow of the authoritative source <input type="checkbox"/> Data are available in EHRs <input type="checkbox"/> Data are auditable</p>										
11 (2a, 4b)	<p>11 Data Source and Data Collection Methods Identifies the data source(s) necessary to implement the measure specifications. Check all that apply</p> <table border="0"> <tr> <td><input type="checkbox"/> Electronic Health/Medical Record</td> <td><input type="checkbox"/> Paper Medical Record</td> </tr> <tr> <td><input type="checkbox"/> Electronic Clinical Database, Name:</td> <td><input type="checkbox"/> Standardized clinical instrument, Name:</td> </tr> <tr> <td><input type="checkbox"/> Electronic Clinical Registry, Name:</td> <td><input type="checkbox"/> Standardized patient survey, Name:</td> </tr> <tr> <td><input checked="" type="checkbox"/> Electronic Claims</td> <td><input type="checkbox"/> Standardized clinician survey, Name:</td> </tr> <tr> <td><input type="checkbox"/> Electronic Pharmacy data</td> <td><input type="checkbox"/> Other, Describe:</td> </tr> </table>	<input type="checkbox"/> Electronic Health/Medical Record	<input type="checkbox"/> Paper Medical Record	<input type="checkbox"/> Electronic Clinical Database, Name:	<input type="checkbox"/> Standardized clinical instrument, Name:	<input type="checkbox"/> Electronic Clinical Registry, Name:	<input type="checkbox"/> Standardized patient survey, Name:	<input checked="" type="checkbox"/> Electronic Claims	<input type="checkbox"/> Standardized clinician survey, Name:	<input type="checkbox"/> Electronic Pharmacy data	<input type="checkbox"/> Other, Describe:

<p>21 (1c)</p>	<p>Clinical Practice Guideline <i>Cite the guideline reference; quote the specific guideline recommendation related to the measure and the guideline author's assessment of the strength of the evidence; and summarize the rationale for using this guideline over others.</i></p> <p>Guideline Citation: Endometrial Ablation. ACOG Practice Bulletin 2007 [cited 2007 August 1, 2007].</p> <p>Specific guideline recommendation: The American College of Obstetricians and Gynecologists (ACOG) recommends that "the endometrium of all candidates for endometrial ablation should be sampled and histopathologic results should be reviewed before the procedure." (Level of evidence based upon expert opinion).[1]</p> <p>Guideline author's rating of strength of evidence (<i>If different from USPSTF, also describe it and how it relates to USPSTF</i>): Level of evidence based upon expert opinion</p> <p>Rationale for using this guideline over others: ACOG is the leading US organization in the field of obstetrics and gynecology and its guidelines are highly regarded within the medical community.</p>
<p>22 (1c)</p>	<p>Controversy/Contradictory Evidence <i>Summarize any areas of controversy, contradictory evidence, or contradictory guidelines and provide citations.</i></p> <p>Summary: There is little controversy about the utility of performing an endometrial biopsy prior to endometrial ablation. If the biopsy were not performed prior to the ablation, there would be more patients suffering from a delay in diagnosis of endometrial malignancy.</p> <p>Citations: N/A</p>

³The strength of the body of evidence for the specific measure focus should be systematically assessed and rated, e.g., USPSTF grading system www.ahrq.gov/clinic/uspstmeth.htm: **A** - The USPSTF recommends the service. There is high certainty that the net benefit is substantial. **B** - The USPSTF recommends the service. There is high certainty that the net benefit is moderate or there is moderate certainty that the net benefit is moderate to substantial. **C** - The USPSTF recommends against routinely providing the service. There may be considerations that support providing the service in an individual patient. There is at least moderate certainty that the net benefit is small. Offer or provide this service only if other considerations support the offering or providing the service in an individual patient. **D** - The USPSTF recommends against the service. There is moderate or high certainty that the service has no net benefit or that the harms outweigh the benefits. **I** - The USPSTF concludes that the current evidence is insufficient to assess the balance of benefits and harms of the service. Evidence is lacking, of poor quality, or conflicting, and the balance of benefits and harms cannot be determined.

23 (1)	Briefly describe how this measure (as specified) will facilitate significant gains in healthcare quality related to the specific priority goals and quality problems identified above: Recommending that all patients undergo endometrial biopsy prior to endometrial ablation will ensure that there is no malignancy present prior to ablation. Given that the symptoms of menorrhagia that prompt endometrial ablation are so similar to those of endometrial carcinoma and that the ablation itself can mask the symptoms of malignancy, it is important to rule out carcinoma prior to ablation. The widespread use of this measure will lead to earlier diagnosis of endometrial cancer, which can lead to lower morbidity and cost.																											
SCIENTIFIC ACCEPTABILITY OF MEASURE PROPERTIES																												
Note: Testing and results should be summarized in this form. However, additional detail and reports may be submitted as supplemental information or provided as a web page URL. If a measure has not been tested, it is only potentially eligible for time-limited endorsement.																												
24	Supplemental Testing Information: attached <input type="checkbox"/> OR Web page URL:																											
25 (2b)	<p>Reliability Testing</p> <p>Data/sample: Data from commercial health plans were used to generate rates of colonoscopy follow-up, according to the algorithm specified above. 27 (2d)	Measure Exclusions <i>Provide evidence to justify exclusion(s) and analysis of impact on measure results during testing.</i>																											

	<p>Summary of Evidence supporting exclusion(s): Women who had an endometrial ablation procedure during the year prior to the index date:</p> <p>These are patients who are undergoing a repeat ablation procedure during the measurement year. Presumably, an endometrial biopsy would have been performed prior to the first endometrial ablation. It would be unfair to not provide credit to clinicians for not performing an endometrial biopsy prior to a repeat ablation.</p> <p>Citations for Evidence: N/A</p> <p>Data/sample: N/A</p> <p>Analytic Method: N/A</p> <p>Testing Results: N/A</p>
28 (2e)	<p>Risk Adjustment Testing Summarize the testing used to determine the need (or no need) for risk adjustment and the statistical performance of the risk adjustment method.</p> <p>Data/sample: N/A</p> <p>Analytic Method: N/A</p> <p>Testing Results: N/A</p> <p>► If outcome or resource use measure not risk adjusted, provide rationale:</p>
29 (2g)	<p>Testing comparability of results when more than 1 data method is specified (e.g., administrative claims or chart abstraction)</p> <p>Data/sample: N/A</p> <p>Analytic Method: N/A</p> <p>Results: N/A</p>
30 (2f)	<p>Provide Measure Results from Testing or Current Use Results from testing</p> <p>Data/sample: See boxes 25 and 26</p> <p>Methods to identify statistically significant and practically/meaningfully differences in performance:</p> <p>Results:</p>
31 (2h)	<p>Identification of Disparities</p> <p>► If measure is stratified by factors related to disparities (i.e. race/ethnicity, primary language, gender, SES, health literacy), provide stratified results: N/A</p> <p>► If disparities have been reported/identified, but measure is not specified to detect disparities, provide rationale:</p>
USABILITY	
32 (3)	<p>Current Use Testing completed If in use, how widely used (select one) ► If "other," please describe:</p> <p><input type="checkbox"/> Used in a public reporting initiative, name of initiative: Sample report attached <input type="checkbox"/> OR Web page URL:</p>
33 (3a)	<p>Testing of Interpretability (Testing that demonstrates the results are understood by the potential users for public reporting and quality improvement)</p>

	<p>Data/sample: Data are reported as rates and denominator size. It was felt that no interpretability testing was needed. Based upon numerous interactions with health plans, performance based on denominator and rate are easily interpreted, as long as the populations captured in numerator, denominator and denominator exclusion are made explicit.</p> <p>Methods: N/A</p> <p>Results: N/A</p>
<p>34 (3b, 3c)</p>	<p>Relation to other NQF-endorsed™ measures</p> <p>► Is this measure similar or related to measure(s) already endorsed by NQF (on the same topic or the same target population)? <i>Measures can be found at www.qualityforum.org under Core Documents.</i></p> <p><i>Check all that apply</i></p> <p><input type="checkbox"/> Have not looked at other NQF measures <input type="checkbox"/> Other measure(s) on same topic</p> <p><input type="checkbox"/> Other measure(s) for same target population <input checked="" type="checkbox"/> No similar or related measures</p> <p>Name of similar or related NQF-endorsed™ measure(s):</p> <p>Are the measure specifications harmonized with existing NQF-endorsed™ measures? (select one)</p> <p>► If not fully harmonized, provide rationale:</p> <p>Describe the distinctive, improved, or additive value this measure provides to existing NQF-endorsed measures:</p>
<p>FEASIBILITY</p>	
<p>35 (4a)</p>	<p>How are the required data elements generated? <i>Check all that apply</i></p> <p><input type="checkbox"/> Data elements are generated concurrent with and as a byproduct of care processes during care delivery (e.g., blood pressure or other assessment recorded by personnel conducting the assessment)</p> <p><input type="checkbox"/> Data elements are generated from a patient survey (e.g., CAHPS)</p> <p><input checked="" type="checkbox"/> Data elements are generated through coding performed by someone other than the person who obtained the original information (e.g., DRG or ICD-9 coding on claims)</p> <p><input type="checkbox"/> Other, Please describe:</p>
<p>36 (4b)</p>	<p>Electronic Sources <i>All data elements</i></p> <p>► If all data elements are not in electronic sources, specify the near-term path to electronic collection by most providers:</p> <p>► Specify the data elements for the electronic health record: <i>ICD-9 diagnosis codes, ICD-9 Proc Codes, CPT-4 codes, HCPCS codes, UB revenue codes, NDC code, DRG codes</i></p>
<p>37 (4c)</p>	<p>Do the specified exclusions require additional data sources beyond what is required for the other specifications? <i>No</i></p> <p>► If yes, provide justification:</p>
<p>38 (4d)</p>	<p>Identify susceptibility to inaccuracies, errors, or unintended consequences of the measure: <i>This is a administrative claims-based quality indicator with certain potential biases, including coding variation between providers and missing data. Nevertheless, administrative claims data is the widely available and has been used to effectively examine and document patterns of health care utilization, detect opportunities to improve quality of care, estimate incidence of disease, and even assess outcomes of pharmaceutical, radiological, and surgical procedures.</i></p> <p>Describe how could these potential problems be audited: <i>HBI has developed an online tool (currently in use by several health plans), which allows physicians the opportunity to supplement their quality scores through self-report via a secured web site. Via this website, physicians are able to identify specific patients with whom they had an office visit during the measurement period and who reportedly did not have the indicated quality care. Physicians can then review their charts to verify whether in fact the quality care was performed. The physician can then manually enter corrections to the patient record via the website, indicating that the quality care was done. This data is subject to clinical review prior to</i></p>

	<p><i>acceptance. The hybrid quality score (via administrative claims and self report) can be updated on a quarterly basis.</i></p> <p><i>Did you audit for these potential problems during testing? No If yes, provide results:</i></p>
39 (4e)	<p>Testing feasibility Describe what have you learned/modified as a result of testing and/or operational use of the measure regarding data collection, availability of data/missing data, timing/frequency of data collection, patient confidentiality, time/cost of data collection, other feasibility/ implementation issues:</p>
CONTACT INFORMATION	
40	<p>Web Page URL for Measure Information Describe where users (implementers) should go for more details on specifications of measures, or assistance in implementing the measure. Web page URL: <i>N/A</i></p>

50	Date of Submission (MM/DD/YY): 11/21/08

PATIENT & FAMILY ENGAGEMENT

PRIORITY STATEMENT: Engage Patients and Their Families in Managing Their Health and Making Decisions About Their Care

- 1.1. All providers will routinely solicit and publicly report on their patients' perspectives of care
- 1.2. All providers will work collaboratively with their patients to assist them in making informed decisions about treatment options consistent with their values and preferences

POPULATION HEALTH

PRIORITY STATEMENT: IMPROVE THE HEALTH OF THE U.S. POPULATION

- 2.1. The population will be up to date on all high-priority age- and gender-appropriate evidence-based clinical preventive services
- 2.2. The population will receive recommended evidence-based interventions to improve targeted healthy lifestyle behaviors
- 2.3. All communities will demonstrate a 10% improvement in their community index of health
- 2.4. Americans will have all recommended high priority healthy lifestyle behaviors under control

SAFETY

PRIORITY STATEMENT: IMPROVE THE SAFETY OF THE U.S. HEALTH CARE SYSTEM

- 3.1. All providers will drive all preventable healthcare-associated infections (HAI) to zero
- 3.2. All providers will drive the incidence of preventable NQF Serious Reportable Events (SRE) to zero
- 3.3. All hospitals will reduce preventable and premature mortality rates to best-in-class
- 3.4. All hospitals and their community partners will reduce 30-day mortality rates following hospitalization for select conditions to best-in-class

PALLIATIVE CARE

PRIORITY STATEMENT: GUARANTEE APPROPRIATE AND COMPASSIONATE CARE FOR PATIENTS WITH LIFE-LIMITING ILLNESSES

- 4.1. All providers will identify, document, and effectively treat physical symptoms (e.g. pain, shortness of breath, constipation, others) at levels acceptable to patients with a life-limiting illness
- 4.2. All providers will effectively address the psychosocial and spiritual needs of patients with life-limiting illnesses and their families according to their preferences
- 4.3. All eligible patients will receive high quality palliative care and hospice services

CARE COORDINATION

PRIORITY STATEMENT: ENSURE PATIENTS RECEIVE WELL-COORDINATED CARE ACROSS ALL PROVIDERS, SETTINGS, AND LEVELS OF CARE

- 5.1. All providers will accurately and completely reconcile medications across the continuum of care (i.e. admission, transfer within and between care providers, discharge, and outpatient appointments) and ensure communication with the next provider of services
- 5.2. All inpatient and outpatient providers will assess the patient's perspective of the coordination of their care using a validated care coordination survey tool
- 5.3. All providers will reduce 30-day all-cause readmission rates resulting from poorly coordinated care to best-in-class
- 5.4. All providers will reduce preventable emergency department (i.e. those that could be avoided with timely access to primary care) visits resulting from poorly coordinated care by 50%

PATIENT-FOCUSED CARE

PRIORITY STATEMENT: GUARANTEE HIGH VALUE CARE ACROSS ACUTE AND CHRONIC EPISODES

- 6.1. All patients will receive high-value care over the course of their acute or chronic illness

OVERUSE

PRIORITY STATEMENT: ELIMINATE WASTE WHILE ENSURING THE DELIVERY OF APPROPRIATE CARE

- 7.1. Reduce wasteful and inappropriate care for the top ten targeted areas by 50%
