

Behavioral Health and Substance Use, Fall 2019 Measure Review Cycle

Standing Committee Orientation Nicolette Mehas, PharmD, Director Hannah Bui, MPH, Project Analyst

January 10, 2020

Welcome

Project Team

- Nicolette Mehas, PharmD, Director
- Hannah Bui, MPH, Project Analyst

Agenda for the Call

- Standing Committee introductions/roll call
- Overview of NQF, the Consensus Development Process, and roles of the Standing Committee, co-chairs, and NQF staff
- Overview of measure evaluation process
- Review of project activities and timelines
- Overview of NQF's portfolio of Behavioral Health and Substance Use measures
- Overview of NQF's measure evaluation criteria
- Overview of social risk
- SharePoint tutorial
- Next steps

Behavioral Health and Substance Use Standing Committee

- Peter Briss, MD, MPH, (Co-chair)
- Harold Pincus, MD (Co-chair)
- Mady Chalk, PhD, MSW
- David Einzig, MD
- Julie Goldstein Grumet, PhD
- Charles Gross, PhD
- Lisa Jensen, DNP, APRN
- Dolores (Dodi) Kelleher, MS, DMH
- Kraig Knudsen, PhD
- Michael R. Lardieri, LCSW
- Tami Mark, PhD, MBA
- Raquel Mazon Jeffers, MPH, MIA

- Bernadette Melnyk, PhD, RN,
 CPNP/PMHNP, FAANP, FNAP, FAAN
- Laurence Miller, MD
- Brooke Parish, MD
- David Pating, MD
- Vanita Pindolia, PharmD
- Lisa Shea, MD, DFAPA
- Andrew Sperling, JD
- Jeffery Susman, MD
- Michael Trangle, MD
- Bonnie Zima, MD, MPH
- Leslie S. Zun, MD, MBA

Overview of NQF, the CDP, and Roles

The National Quality Forum: A Unique Role

Established in 1999, NQF is a nonprofit, nonpartisan, membership-based organization that brings together public and private sector stakeholders to reach consensus on healthcare performance measurement. The goal is to make healthcare in the U.S. better, safer, and more affordable.

Mission: To lead national collaboration to improve health and healthcare quality through measurement

- An Essential Forum
- Gold Standard for Quality Measurement
- Leadership in Quality

NQF Activities in Multiple Measurement Areas

Performance Measure Endorsement

- 600+ NQF-endorsed measures across multiple clinical areas
- 15 empaneled standing expert committees

Measure Applications Partnership (MAP)

Advises HHS on selecting measures for 20+ federal programs

National Quality Partners

- Convenes stakeholders around critical health and healthcare topics
- Spurs action: recent examples include antibiotic stewardship, advanced illness care, shared decision making, and opioid stewardship

Measurement Science

- Convenes private and public sector leaders to reach consensus on complex issues in healthcare performance measurement
 - » Examples include HCBS, rural issues, telehealth, interoperability, attribution, risk-adjustment for social risk factors, diagnostic accuracy, disparities

Measure Incubator

Facilitates efficient measure development and testing through collaboration and partnership

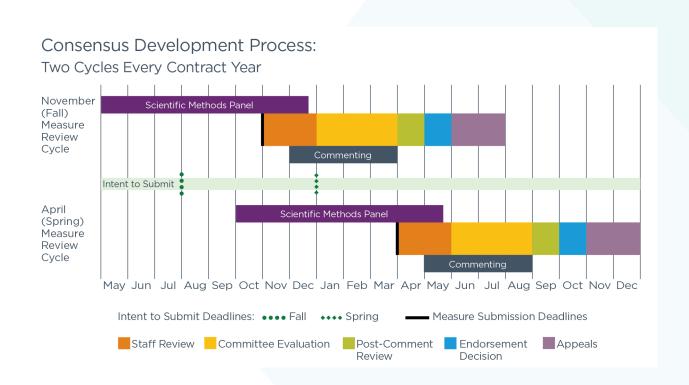

NQF Consensus Development Process (CDP)

6 Steps for Measure Endorsement

- Intent to Submit
- Call for Nominations
- Measure Evaluation
- Public Commenting Period with Member Support
- Measure Endorsement
 - Consensus Standards Approval Committee (CSAC)
- Measure Appeals

Measure Review: Two Cycles Per Year

14 Measure Review Topical Areas

	All Cause Admission/ Readmissions	Behavioral Health		[
Cancer	Cardiovascular	Care Coordination	Infectious Disease	[
Cost and Resource Use	Endocrine	Eyes, Ears, Nose and Throat Conditions	Palliative and End-of Life Care	
Gastrointestinal	Genitourinary	Health and Well Being	Musculoskeletal	
Neurology	Patient Safety	Pediatrics	Perinatal	
Person and Family- Centered Care	Pulmonary and Critical Care	Renal	Surgery	

All Cause Admission/ Readmissions	Behavioral Health & Substance Use	Cancer	
Cardiovascular	Cost and Efficiency	Geriatric and Palliative Care ^A	
Neurology	Patient Experience & Function	Patient Safety ^B	
Perinatal and Women's Health	Prevention and Population Health ^c	Primary Care and Chronic Illness	
Rer	nal Sur _i	gery	

□ Denotes expanded topic area

^AGeriatric & Palliative Care includes pain-focused measures from other domains

^B Patient Safety will include acute infectious disease and critical measures

 $^{^{\}rm C}$ Prevention and Population Health is formerly Health and Well Being

Role of the Standing Committee General Duties

- Act as a proxy for the NQF multistakeholder membership
- Serve initial 2-year or 3-year terms
 - Opportunity to renew for 2 additional years (4 cycles)
- Work with NQF staff to achieve the goals of the project
- Evaluate candidate measures against the measure evaluation criteria
- Respond to comments submitted during the review period
- Respond to any directions from the CSAC
- Refer to the <u>Standing Committee Guidebook</u> for more information

Role of the Standing Committee Meeting Participation

- Meeting attendance
 - Must notify NQF staff if unable to attend in advance of the meeting
- Quorum requirements
 - NQF Quorum=66% of active members
 - Committee recommendations can only be made with a quorum of Committee votes
 - » Not based on Robert's Rules of Order
 - Votes may be requested via email if quorum is not reached during the meeting
 - » Materials (i.e., recording, transcripts) will be sent to inform votes
 - Meetings may be cancelled (and rescheduled) if quorum not reached and vote is required
- Measure-specific disclosure of interest
 - Must be completed to participate in the measure evaluation discussion (each cycle)

Role of the Standing Committee Measure Evaluation Duties

- All members evaluate ALL measures being considered for endorsement
- Evaluate measures against each criterion
 - Indicate the extent to which each criterion is met and rationale for the rating
- Make recommendations to the NQF membership for endorsement
- Oversee BHSU portfolio of measures
 - Promote alignment and harmonization
 - Identify gaps

Role of the Standing Committee Co-Chairs

- Co-facilitate Standing Committee (SC) meetings with NQF staff
- Work with NQF staff to achieve the goals of the project
- Assist NQF in anticipating questions and identifying additional information that may be useful to the SC
- Keep SC on track to meet goals of the project without hindering critical discussion/input
- Represent the SC at CSAC meetings
- Participate as a SC member

Role of NQF Staff

NQF project staff works with SC to achieve the goals of the project and ensure adherence to the consensus development process:

- Organize and staff SC meetings and conference calls
- Guide SC through the CDP and advise on NQF policy and procedures; ensure NQF evaluation criteria is appropriately applied and process is followed
- Review measure submissions and prepare materials for Committee review
- Draft and edit reports for SC review
- Ensure and facilitate communication among all project participants (including SC and measure developers)
- Facilitate collaboration between different NQF projects

Role of NQF Staff Communication

- Respond to NQF member or public queries about the project
- Maintain documentation of project activities
- Post project information to NQF's website
- Work with measure developers to provide necessary information and communication for the SC to fairly and adequately evaluate measures for endorsement
- Publish final project report

Role of Methods Panel

- Scientific Methods Panel was created to ensure higher-level and more consistent reviews of the scientific acceptability of measures
- The Methods Panel is charged with:
 - Conducting evaluation of complex measures for the Scientific Acceptability criterion, with a focus on reliability and validity analyses and results
 - Serve in advisory capacity to NQF on methodologic issues, including those related to measure testing, risk adjustment, and measurement approaches.
- The Methods Panel review will help inform the standing committee's endorsement decision. The Panel will not render endorsement recommendations.

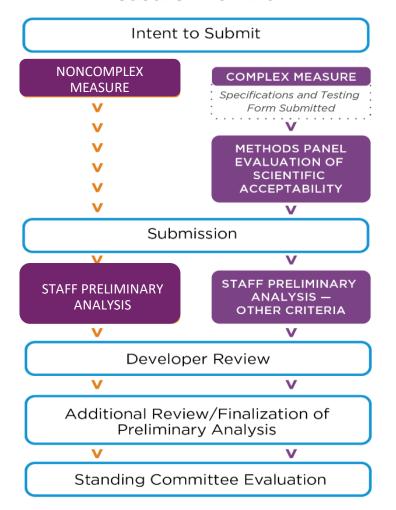

Questions?

Overview of Measure Evaluation Process

Measure Evaluation Workflow

Measure Workflow

NQF Consensus Development Process (CDP) Measure Evaluation

Complex Measures

- Outcome measures, including intermediate clinical outcomes
- Instrument-based measures (e.g., PRO-PMs)
- Cost/resource use measures
- Efficiency measures (those combining concepts of resource use and quality)
- Composite measures

Noncomplex Measures

- Process measures
- Structural measures
- Previously endorsed complex measures with no changes/updates to the specifications or testing

When Measures Are Submitted to NQF

- NQF team reviews measures for the following:
 - All required submission form items have a response
 - Submission meets the minimum requirements to be reviewed (e.g., testing is performed at requisite levels (data element and/or measure score)
- Committee completes measure-specific disclosures of interest
- NQF staff creates a measure worksheet for each measure
 - Includes: all submission materials (i.e., measure specifications, testing information, evidence information) staff analysis, and summary of methods panel review

Complex Measure Evaluation

- Complex measures are reviewed by the SMP when:
 - Newly submitted
 - Maintenance measures with updated testing
 - NQF staff requests (e.g., expert opinion needed to support review of testing, review of unfamiliar methodology)
- All measures reviewed by the SMP can be discussed by the standing committee
 - Standing Committee will evaluate and make recommendations for endorsement for:
 - » Measures that pass SMP review
 - » Measures where the SMP did not reach consensus
 - Measures that did not pass the SMP can be pulled by a standing committee member for further discussion

- Committee members are notified of methods panel evaluation results (if complex measures reviewed by SMP)
- Members have the opportunity to pull failed measures for discussion (and re-vote for eligible measures)

Committee Consideration of Measures that Do Not Pass the SMP

- Any measure pulled by a Standing Committee member will be discussed
 - Request should be submitted with a brief rationale
- Some measures may be eligible for vote by the Standing Committee
 - Eligibility will be determined by NQF Staff and SMP co-chairs
 - Measures that failed the SMP due to the following will not be eligible for re-vote:
 - » Inappropriate methodology or testing approach applied to demonstrate reliability or validity
 - » Incorrect calculations or formulas used for testing
 - » Description of testing approach, results, or data is insufficient for SMP to apply the criteria
 - » Appropriate levels of testing not provided or otherwise did not meet NQF's minimum evaluation requirements

Committee Consideration of Measures that Do Not Pass the SMP

- For measures eligible for vote by the Committee:
 - The full Committee must vote on whether to uphold the SMP's vote on R/V
 - » Vote to Uphold → No further discussion of the measure
 - » CNR or Vote to overturn SMP Vote → SC discusses and votes on Reliability and/or Validity
- Maintenance Measures
 - Endorsement will be removed for maintenance measures not pulled for discussion

~3 week review period for Measure Worksheets:

- Measure Information Form (MIF): describes measure and specifications (e.g., title, description, numerator, denominator)
- Preliminary analysis by NQF Staff
- Committee preliminary ratings
- Member and public comments
- Information submitted by the developer
 - Evidence and testing attachments
 - Spreadsheets
 - Additional documents

- Preliminary analysis (PA): To assist the Committee evaluation of each measure against the criteria, NQF staff and Methods Panel (if applicable) will prepare a PA of the measure submission and offer preliminary ratings for each criteria.
 - The PA will be used as a starting point for the Committee discussion and evaluation
 - Methods Panel will complete review of Scientific Acceptability criterion for complex measures
- Individual evaluation: Each Committee member will conduct an in-depth evaluation on all measures under review
 - Each Committee member will be assigned a subset of measures for which they will serve as lead discussant in the evaluation meeting

- NQF staff compiles votes and redistributes measure worksheet with summary of all members preliminary analyses
- Lead discussants are assigned to each measure for committee evaluation meetings
- Measure evaluation and recommendations at the in-person/web meeting: The entire Committee will discuss and rate each measure against the evaluation criteria and make recommendations for endorsement.

Evaluation Process Continued

- Staff will prepare a draft report detailing the Committee's discussion and recommendations
 - This report will be released for a 30-day public and member comment period
- Post-comment call: The Committee will re-convene for a postcomment call to discuss comments submitted
- Final endorsement decision by the CSAC
- Opportunity for public to appeal endorsement decision (for endorsed measures only)

Overview of NQF's Behavioral Health and Substance Use Portfolio

Behavioral Health and Substance Use Portfolio of Measures

- This project will evaluate measures related to Behavioral Health and Substance Use conditions that can be used for accountability and public reporting for all populations and in all settings of care. This project will address topic areas including:
 - Substance use
 - Depression
 - SMI/schizophrenia/bipolar disorder
 - Coordination
- NQF solicits new measures for possible endorsement
- NQF currently has 46 endorsed measures within this topic area.
 Endorsed measures undergo periodic evaluation to maintain endorsement—"maintenance".

BHSU Portfolio of NQF-Endorsed Measures

Depression

- 0104e Adult Major Depressive Disorder (MDD): Suicide Risk Assessment
- 0105 Antidepressant Medication Management (AMM)
- 0418/0418e Preventive Care and Screening: Screening for Depression and Follow-Up Plan
- 0710 Depression Remission at 12 Months
- 0711 Depression Remission at Six Months
- 0712 Depression Utilization of the PHQ-9 Tool
- 1365 Child and Adolescent Major Depressive Disorder (MDD): Suicide Risk Assessment
- 1884 Depression Response at Six Months Progress Towards Remission
- 1885 Depression Response at 12 Months Progress Towards Remission

BHSU Portfolio of NQF-Endorsed Measures

Coordination

- 0004 Initiation and Engagement of Alcohol and Other Drug Abuse or Dependence Treatment
- 0108 Follow-Up Care for Children Prescribed ADHD Medication (ADD)
- 0576 Follow-Up After Hospitalization for Mental Illness (FUH)
- 3205 Medication Continuation Following Inpatient Psychiatric Discharge
- 3312 Continuity of Care for Medicaid Beneficiaries after Detoxification (Detox) from Alcohol and/or Drugs
- 3313 Follow-Up Care for Adult Medicaid Beneficiaries Who are Newly Prescribed an Antipsychotic
- 3317 Medication Reconciliation on Admission
- 3453 Continuity of care after inpatient or residential treatment for substance use disorder (SUD)
- 3488 Follow-Up After Emergency Department Visit for Alcohol and Other Drug Abuse or Dependence
- 3489 Follow-Up After Emergency Department Visit for Mental Illness

BHSU Portfolio of NQF-Endorsed Measures

Substance Use

- 0027 Medical Assistance With Smoking and Tobacco Use Cessation
- 0028/0028e Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention
- 2152 Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling
- 2597 Substance Use Screening and Intervention Composite
- 2599 Alcohol Screening and Follow-up for People with Serious Mental Illness
- 2600 Tobacco Use Screening and Follow-up for People with Serious Mental Illness or Alcohol or Other Drug Dependence
- 2803 Tobacco Use and Help with Quitting Among Adolescents
- 2806 Pediatric Psychosis: Screening for Drugs of Abuse in the Emergency Department
- 3175 Continuity of Pharmacotherapy for Opioid Use Disorder

BHSU Portfolio of NQF-Endorsed Measures

SMI/Schizophrenia/Bipolar Disorder

- 1879 Adherence to Antipsychotic Medications for Individuals with Schizophrenia
- **1880** Adherence to Mood Stabilizers for Individuals with Bipolar I Disorder
- 1932 Diabetes Screening for People with Schizophrenia or Bipolar Disorder Who Are Using Antipsychotic Medications (SSD)
- 1933 Cardiovascular Monitoring for People With Cardiovascular Disease and Schizophrenia (SMC)
- 1934 Diabetes Monitoring for People with Diabetes and Schizophrenia (SMD)
- 2601 Body Mass Index Screening and Follow-Up for People with Serious Mental Illness
- 2602 Controlling High Blood Pressure for People with Serious Mental Illness
- 2603 Diabetes Care for People with Serious Mental Illness: Hemoglobin A1c (HbA1c) Testing
- 2604 Diabetes Care for People with Serious Mental Illness: Medical Attention for Nephropathy
- 2606 Diabetes Care for People with Serious Mental Illness: Blood Pressure Control (<140/90 mm Hg)
- 2607 Diabetes Care for People with Serious Mental Illness: Hemoglobin A1c (HbA1c) Poor Control (>9.0%)
- 2608 Diabetes Care for People with Serious Mental Illness: Hemoglobin A1c (HbA1c) Control (<8.0%)
- 2609 Diabetes Care for People with Serious Mental Illness: Eye Exam

BHSU Portfolio of NQF-Endorsed Measures

Psychiatric Hospitalization Safety

- 0640 HBIPS-2 Hours of physical restraint use
- 0641 HBIPS-3 Hours of seclusion use

Other

- 2800 Metabolic Monitoring for Children and Adolescents on Antipsychotics
- 2801 Use of First-Line Psychosocial Care for Children and Adolescents on Antipsychotics
- 3332 Psychosocial Screening Using the Pediatric Symptom Checklist Tool (PSC-Tool)

Fall 2019 Measures for Review

- 2800 Metabolic Monitoring for Children and Adolescents on Antipsychotics (NCQA)
- 2801 Use of First-Line Psychosocial Care for Children and Adolescents on Antipsychotics (NCQA)
- 3175 Continuity of Pharmacotherapy for Opioid Use Disorder (RAND Corporation) (Ad hoc review of Scientific Acceptability only)
- 3492 Acute Care Use Due to Opioid Overdose (Yale/YNHH Center for Outcomes Research and Evaluation (CORE) / CMS)
- 3538 All-Cause Emergency Department Utilization Rate for Medicaid Beneficiaries Who May Benefit from Integrated Physical and Behavioral Health Care (Mathematica)
- 3539e Use of Antipsychotics in Older Adults in the Inpatient Hospital Setting (Mathematica)
- 3541 Annual Monitoring for Persons on Long-Term Opioid Therapy (PQA)

Fall 2019 Measures Reviewed by the SMP for Scientific Acceptability

Passed Reliability and Validity

 3538 All-Cause Emergency Department Utilization Rate for Medicaid Beneficiaries Who May Benefit from Integrated Physical and Behavioral Health Care

Passed Reliability, Did Not Pass Validity (Pulled for Discussion by Standing Committee)

3492 Acute Care Use Due to Opioid Overdose

Questions?

Measure Evaluation Criteria Overview

NQF Measure Evaluation Criteria for Endorsement

NQF endorses measures for accountability applications (public reporting, payment programs, accreditation, etc.) as well as quality improvement.

- Standardized evaluation criteria
- Criteria have evolved over time in response to stakeholder feedback
- The quality measurement enterprise is constantly growing and evolving—greater experience, lessons learned, expanding demands for measures—the criteria evolve to reflect the ongoing needs of stakeholders

Major Endorsement Criteria (page 32 in the SC Guidebook)

- Importance to measure and report: Goal is to measure those aspects with greatest potential of driving improvements; if not important, the other criteria are less meaningful (must-pass)
- Reliability and Validity-scientific acceptability of measure properties: Goal is to make valid conclusions about quality; if not reliable and valid, there is risk of improper interpretation (mustpass)
- Feasibility: Goal is to, ideally, cause as little burden as possible; if not feasible, consider alternative approaches
- Usability and Use (must-pass for maintenance measures): Goal is to use for decisions related to accountability and improvement; if not useful, probably do not care if feasible
- Comparison to related or competing measures

Criterion 1: Importance to Measure and Report (page 34-42)

- 1. Importance to measure and report Extent to which the specific measure focus is evidence-based and important to making significant gains in healthcare quality where there is variation in or overall less-than-optimal performance.
 - 1a. Evidence: the measure focus is evidence-based
 - 1b. Opportunity for Improvement: demonstration of quality problems and opportunity for improvement, i.e., data demonstrating considerable variation, or overall less-than-optimal performance, in the quality of care across providers; and/or

disparities in care across population groups

1c. Quality construct and rationale (composite measures only)

Subcriterion 1a: Evidence (page 36-42)

Outcome measures

Empirical data demonstrate a relationship between the outcome and at least one healthcare structure, process, intervention, or service. If not available, wide variation in performance can be used as evidence, assuming the data are from a robust number of providers and results are not subject to systematic bias.

Structure, process, intermediate outcome measures

- The quantity, quality, and consistency of the body of evidence underlying the measure should demonstrate that the measure focuses on those aspects of care known to influence desired patient outcomes
 - » Empirical studies (expert opinion is not evidence)
 - » Systematic review and grading of evidence
 - Clinical Practice Guidelines variable in approach to evidence review

For measures derived from patient (or family/parent/etc.) report

- Evidence should demonstrate that the target population values the measured outcome, process, or structure and finds it meaningful.
- Current requirements for structure and process measures also apply to patient-reported structure/process measures.

Rating Evidence: Algorithm 1 (page 37)

[Screen share Evidence algorithm]

Criterion 1: Importance to measure and report

Criteria emphasis is different for new vs. maintenance measures

New measures	Maintenance measures
 Evidence – Quantity, quality, consistency (QQC) Established link for process measures with outcomes 	DECREASED EMPHASIS: Require measure developer to attest evidence is unchanged evidence from last evaluation; Standing Committee to affirm no change in evidence IF changes in evidence, the Committee will evaluate as for new measures
 Gap – opportunity for improvement, variation, quality of care across providers 	INCREASED EMPHASIS: data on current performance, gap in care and variation

Criterion 2: Reliability and Validity— Scientific Acceptability of Measure Properties (pages 42-54)

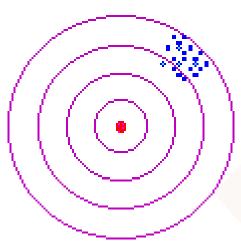

Extent to which the measure, <u>as specified</u>, produces consistent (reliable) and credible (valid) results about the quality of health care delivery

- 2a. Reliability (must-pass)
 - 2a1. Precise specifications including exclusions
 - 2a2. Reliability testing—data elements or measure score
- 2b. Validity (must-pass)
 - 2b1. Validity testing—data elements or measure score
 - 2b2. Justification of exclusions—relates to evidence
 - 2b3. Risk adjustment—typically for outcome/cost/resource use
 - 2b4. Identification of differences in performance
 - 2b5. Comparability of data sources/methods
 - 2b6. Missing data

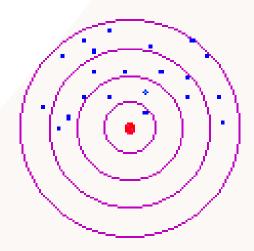

Reliability and Validity (page 46)

Assume the center of the target is the true score.

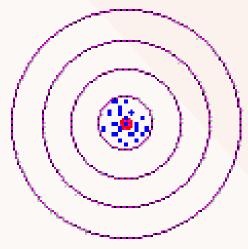

Reliable Not Valid

Consistent, but wrong

Neither Reliable Nor Valid

Inconsistent & wrong

Both Reliable And Valid

Consistent & correct

Evaluating Scientific Acceptability – Key Points (page 45)

Empirical analysis to demonstrate the reliability and validity of the measure as specified, including analysis of issues that pose threats to the validity of conclusions about quality of care such as exclusions, risk adjustment/stratification for outcome and resource use measures, methods to identify differences in performance, and comparability of data sources/methods.

Reliability Testing – Key points (page 48)

- Reliability of the measure score refers to the proportion of variation in the performance scores due to systematic differences across the measured entities in relation to random variation or noise (i.e., the precision of the measure).
 - Example Statistical analysis of sources of variation in performance measure scores (signal-to-noise analysis)
- Reliability of the data elements refers to the repeatability/ reproducibility of the data and uses patient-level data
 - Example inter-rater reliability
- Consider whether testing used an appropriate method and included adequate representation of providers and patients and whether results are within acceptable norms
- Algorithm #2

Rating Reliability: Algorithm #2 (page 47)

[Screen share Reliability algorithm]

Validity Testing (pages 48-54)

- Empirical testing
 - Measure score assesses a hypothesized relationship of the measure results to some other concept; assesses the correctness of conclusions about quality
 - Data element assesses the correctness of the data elements compared to a "gold standard"
- Face validity
 - Subjective determination by experts that the measure appears to reflect quality of care
 - » Empirical validity testing is expected at time of maintenance review; if not possible, justification is required.
 - » Requires systematic and transparent process, by identified experts, that explicitly addresses whether performance scores resulting from the measure as specified can be used to distinguish good from poor quality. The degree of consensus and any areas of disagreement must be provided/discussed.

Rating Validity: Algorithm 3 (page 53)

[Screen share Validity algorithm]

Threats to Validity

- Conceptual
 - Measure focus is not a relevant outcome of healthcare or not strongly linked to a relevant outcome
- Unreliability
 - Generally, an unreliable measure cannot be valid
- Patients inappropriately excluded from measurement
- Differences in patient mix for outcome and resource use measures
- Measure scores that are generated with multiple data sources/methods
- Systematic missing or "incorrect" data (unintentional or intentional)

Criterion 2: Scientific Acceptability

New measures	Maintenance measures
Measure specifications are precise with all information needed to implement the measure	NO DIFFERENCE: Require updated specifications
 Reliability Validity (including risk-adjustment) 	adequate, no need for additional testing aat maintenance with certain exceptions (e.g., change in data source, level of analysis, or setting) Must address the questions regarding use of social risk factors in risk-adjustment approach

Criterion 3: Feasibility (pages 54-55)

Extent to which the required data are readily available, retrievable without undue burden, and can be implemented for performance measurement.

3a: Clinical data generated during care process

3b: Electronic sources

3c: Data collection strategy can be implemented

Criterion 4: Usability and Use (pages 55-56)

Extent to which potential audiences (e.g., consumers, purchasers, providers, policymakers) are using or could use performance results for both accountability and performance improvement to achieve the goal of high-quality, efficient healthcare for individuals or populations.

Use (4a) Must-pass for maintenance measures

4a1: Accountability and Transparency: Performance results are used in at least one accountability application within three years after initial endorsement and are publicly reported within six years after initial endorsement.

4a2: Feedback by those being measured or others: Those being measured have been given results and assistance in interpreting results; those being measured and others have been given opportunity for feedback; the feedback has been considered by developers.

Usability (4b)

4b1: Improvement: Progress toward achieving the goal of high-quality, efficient healthcare for individuals or populations is demonstrated.

4b2: Benefits outweigh the harms: The benefits of the performance measure in facilitating progress toward achieving high-quality, efficient healthcare for individuals or populations outweigh evidence of unintended negative consequences to individuals or populations (if such evidence exists).

Criteria 3-4: Feasibility and Usability and Use

Feasibility

New measures	Maintenance measures
Measure feasible, including	NO DIFFERENCE: Implementation
eMeasure feasibility assessment	issues may be more prominent

Usability and Use

New measures	Maintenance measures
Use: used in accountability	INCREASED EMPHASIS: Much
applications and public reporting	greater focus on measure use and
Usability: impact and unintended	and unintended consequences
consequences	

Criterion 5: Related or Competing Measures (pages 57-58)

If a measure meets the four criteria <u>and</u> there are endorsed/new **related** measures (same measure focus or same target population) or **competing** measures (both the same measure focus <u>and</u> same target population), the measures are compared to address harmonization and/or selection of the best measure.

- 5a. The measure specifications are harmonized with related measures OR the differences in specifications are justified.
- 5b. The measure is superior to competing measures (e.g., is a more valid or efficient way to measure) **OR** multiple measures are justified.

Updated Guidance for Measures That Use ICD-10 Coding

- For CY2019 and beyond, reliability testing should be based on ICD-10 coded data.
- Validity testing should be based on ICD-10 coded data
- If providing face validity (FV), both FV of the ICD-10 coding scheme and FV of the measure score as an indicator of quality is required update

eMeasures

- "Legacy" eMeasures
 - Beginning September 30, 2017 all respecified measure submissions for use in federal programs will be required to the same evaluation criteria as respecified measures—the "BONNIE testing only" option will no longer meet endorsement criteria
- For all eMeasures: Reliance on data from structured data fields is expected; otherwise, unstructured data must be shown to be both reliable and valid

Questions?

Social Risk Overview

Background

- NQF conducted a two-year trial period from 2015-2017. During this time, adjustment of measures for social risk factors was no longer prohibited
- The NQF Board of Directors reviewed the results of the trial period and determined there was a need to launch a new social risk initiative
- As part of the Equity Program, NQF will continue to explore the need to adjust for social risk
- Each measure must be assessed individually to determine if SDS adjustment is appropriate (included as part of validity subcriterion)
- The Standing Committee will continue to evaluate the measure as a whole, including the appropriateness of the risk adjustment approach used by the measure developer
- Efforts to implement SDS adjustment may be constrained by data limitations and data collection burden

Standing Committee Evaluation

The Standing Committee will be asked to consider the following questions:

- Is there a conceptual relationship between the SDS factor and the measure focus?
- What are the patient-level sociodemographic variables that were available and analyzed during measure development?
- Does empirical analysis (as provided by the measure developer) show that the SDS factor has a significant and unique effect on the outcome in question?
- Does the reliability and validity testing match the final measure specifications?
