

MEASURE WORKSHEET

This document summarizes the evaluation of the measure as it progresses through NQF's Consensus Development Process (CDP). The information submitted by measure developers/stewards is included after the Brief Measure Information, Preliminary Analysis, and Pre-meeting Public and Member Comments sections.

To navigate the links in the worksheet: Ctrl + click link to go to the link; ALT + LEFT ARROW to return

Purple text represents the responses from measure developers.

Red text denotes developer information that has changed since the last measure evaluation review.

Brief Measure Information

NQF #: 0219

Corresponding Measures:

De.2. Measure Title: Radiation therapy is administered within 1 year (365 days) of diagnosis for women under age 70 receiving breast conserving surgery for breast cancer

Co.1.1. Measure Steward: Commission on Cancer, American College of Surgeons

De.3. Brief Description of Measure: Percentage of female patients, age = 18 and < 70 at diagnosis, who have their first diagnosis of cancer (epithelial malignancy), whose primary tumor is of the breast, had breast conserving surgery and was administered radiation therapy within 1 year (365 days) of diagnosis

1b.1. Developer Rationale: Improve the utilization of radiation therapy for women under the age of 70 receiving breast conserving surgery for breast cancer

S.4. Numerator Statement: Radiation therapy is administered within 1 year (365 days) of the date of diagnosis

S.6. Denominator Statement: Include if all of the following characteristics are identified:

Women

Age = 18 and < 70 at time of diagnosis

Known or assumed to be first or only cancer diagnosis

Epithelial malignancy only

Invasive tumors

Primary tumors of the breast

All or part of 1st course of treatment performed at the reporting facility

Known to be alive within 1 year (365 days) of date of diagnosis

Receipt of breast conserving surgery

S.8. Denominator Exclusions: Exclude, if any of the following characteristics are identified:

Men

Under age 18 or over 69 at time of diagnosis

Second or subsequent cancer diagnosis

Tumor not originating in the breast

Non-epithelial malignancies, exclude rare tumors: 8940 - Mixed tumor, malignant, NOS; 8950 - Mullerian mixed tumor; 8980 - Carcinosarcoma; 8981 - Carcinosarcoma, embryonal

Non-invasive tumor

Stage 0, in-situ tumor

Stage IV, metastatic tumor
None of 1st course therapy performed at reporting facility
Breast conserving surgery was not received
Died within 1 year (365 days) of diagnosis
Patient enrolled in a clinical trial that directly impacts delivery of the standard of care

De.1. Measure Type: Process

S.17. Data Source: Registry Data

S.20. Level of Analysis: Facility

IF Endorsement Maintenance – Original Endorsement Date: Mar 01, 2007 **Most Recent Endorsement Date:** Oct 26, 2016

Preliminary Analysis: Maintenance of Endorsement

To maintain NQF endorsement endorsed measures are evaluated periodically to ensure that the measures still meets the NQF endorsement criteria (“maintenance”). The emphasis for maintaining endorsement is focused on how effective the measure is for promoting improvements in quality. Endorsed measures should have some experience from the field to inform the evaluation. The emphasis for maintaining endorsement is noted for each criterion.

Criteria 1: Importance to Measure and Report

1a. [Evidence](#)

Maintenance measures – less emphasis on evidence unless there is new information or change in evidence since the prior evaluation.

1a. Evidence. The evidence requirements for a *structure, process or intermediate outcome* measure is that it is based on a systematic review (SR) and grading of the body of empirical evidence where the specific focus of the evidence matches what is being measured. For measures derived from patient report, evidence also should demonstrate that the target population values the measured process or structure and finds it meaningful.

The developer provides the following evidence for this measure:

- | | | |
|--|---|--|
| • Systematic Review of the evidence specific to this measure? | <input type="checkbox"/> Yes | <input checked="" type="checkbox"/> No |
| • Quality, Quantity and Consistency of evidence provided? | <input type="checkbox"/> Yes | <input checked="" type="checkbox"/> No |
| • Evidence graded? | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No |

Summary of prior review in 2017:

The developer updated the links for the guidelines and included the NCCN Categories of Evidence and Consensus, but otherwise no changes were made to the evidence since 2012.

Summary of prior review in 2012:

- [National Comprehensive Cancer Network \(NCCN\) Practice Guidelines:](#)
 - Radiation to the whole breast with or without boost (by photons, brachytherapy, or electron beam) to tumor bed. [Additional guidelines for node radiation based on extent of lymph node involvement]. **Level of evidence: Category 1**
 - Note t: Breast irradiation may be omitted in patients ≥ 70 y of age with estrogen-receptor positive, clinically node negative, T1 tumors who receive adjuvant endocrine therapy. **Level of evidence: Category 1**

- Category 1: Based upon high-level evidence, there is uniform NCCN consensus that the intervention is appropriate.
- Additional evidence included a [systematic review](#) of the body of evidence including multiple randomized clinical trials demonstrating approximately 75% reduction in risk of local recurrence with radiation and breast conservation - details on the total number of studies were not provided in previous submission form.
- The 2011 Committee expressed no concerns regarding the evidence underlying this measure.

Changes to evidence from last review

☒ The developer attests that there have been no changes in the evidence since the measure was last evaluated.

☐ The developer provided updated evidence for this measure:

Updates:

N/A

Questions for the Committee:

- The developer attests the underlying evidence for the measure has not changed since the last NQF endorsement review. Does the Committee agree the evidence basis for the measure has not changed and there is no need for repeat discussion and vote on Evidence?

Guidance from the Evidence Algorithm

Process measure/systematic review (Box 3) → Specific information on QQC not presented (Box 4) → evidence graded as high-level evidence(Box 6) → Moderate (highest eligible rating is MODERATE)

Preliminary rating for evidence: ☐ High ☒ Moderate ☐ Low ☐ Insufficient

1b. [Gap in Care/Opportunity for Improvement](#) and 1b. [Disparities](#)

Maintenance measures – increased emphasis on gap and variation

1b. Performance Gap. The performance gap requirements include demonstrating quality problems and opportunity for improvement.

- The developer provided the following [national trend data](#) from the National Cancer Data Base (NCDB):

	2008	2015	2008-2015
# cases (numerator)	48,755 cases in 1,469 facilities	61,051 cases in 1,354 facilities	--
Mean performance Rate	88.1=8% (95% CI: 87.8-88.3)	92.0% (CI: 90.5-90.9)	--
IQR	85.2%-98.9%	89.5%-98.0%	--
Range	--	--	0-100.0%

- The developer stated that more [recent performance data was not provided](#) because all adjuvant therapy information are likely incomplete for the most recent year until programs have had time to collect this information.

Disparities

Race/ethnicity

2015	Non-Hispanic white	Non-Hispanic black	Hispanic	Asian/Hawaiian/Pacific Island
estimated performance rate (EPR)	93.0%	89.1%	87.6%	91.2%
difference from 2008 EPR	+2.8%	+4.8%	+7.4%	+3.7%

Age

2015	Age 18-49	Age 50-59	Age 60-69
estimated performance rate (EPR)	91.7%	92.8%	91.5%
difference from 2008 EPR	+4.4%	+3.7%	2.0%

Insurance Status

2015	Private Insurance	Medicare	Medicaid/No insurance	Other government insurance
estimated performance rate (EPR)	93.5%	90.4%	87.2%	88.5%
difference from 2008 EPR	3.9%	2.0%	+4.8%	-0.4%

The developer provided [additional disparities data](#) on median household income, residents without a high school degree, facility type, and census region.

Questions for the Committee:

- Is performance gap data recent enough to adequately re-evaluate this measure?
- Is there a gap in care that warrants a national performance measure?

Preliminary rating for opportunity for improvement: ☐ High ☒ Moderate ☐ Low ☐ Insufficient

RATIONALE:

Committee Pre-evaluation Comments:

Criteria 1: Importance to Measure and Report (including 1a, 1b, 1c)

1a. Evidence to Support Measure Focus: For all measures (structure, process, outcome, patient-reported structure/process), empirical data are required. How does the evidence relate to the specific structure, process, or outcome being measured? Does it apply directly or is it tangential? How does the structure, process, or outcome relate to desired outcomes? For maintenance measures –are you aware of any new studies/information that changes the evidence base for this measure that has not been cited in the submission? For measures derived from a patient report: Measures derived from a patient report must demonstrate that the target population values the measured outcome, process, or structure.”

- Evidence is strong and directly tied to outcomes

- This is a process measure and is supported by evidence.
- Evidence remains satisfactory
- evidence is strong that radiation improves PFS and OS after partial mastectomy
- The evidence provided relates directly to the process being measured for radiation treatment for women under the age of 70
- process - compliance with national guideline
- yes - this is important to patients
- Many large, randomized, clinical trials with long term follow up demonstrate ongoing benefit of radiation therapy following breast conservation surgery. Clinical practice guideline. Evidence is Level 1. No changes in the evidence. I would rate the evidence as high.
- Outcomes appear to be consistent up until 2019
- Evidence does exist and was in the initial submission, no additional recent evidence appears to have been added. I am not aware of any new literature.
- Moderate level of evidence lacking new evidence since 2012.
- It does not appear there is a need to vote on Evidence.

1b. Performance Gap: Was current performance data on the measure provided? How does it demonstrate a gap in care (variability or overall less than optimal performance) to warrant a national performance measure? Disparities: Was data on the measure by population subgroups provided? How does it demonstrate disparities in the care?

- Performance gap is fairly small, but the performance gap is higher for minority women and women who have Medicaid or are underinsured.
- If a gap exists it is very small. In data from 2015, 90-98% of subjects received radiation.
- A performance gap exists as of 2015 data. Disparity data was provided, but didn't appear striking.
- data provided are old--from 2015, making it difficult to determine if a performance gap still exists. In 2015, performance was already in the low 90s%. Unclear if the gap warrants a national performance measure
- Yes, data presented but also an opportunity for improvement
- yes; varies by insurance status and race
- minimal performance gap
- The developer provided national trend data from the National Cancer Database (NCDB) that indicated in 2015 a 92.0% mean performance rate indicating a continuing gap in performance. The developer provided information from 2008 and 2015 demonstrating an improvement over time but continuing gaps in performance based on race and ethnicity, age, insurance status, and other groups. I believe there is a continuing gap in performance that is moderate and this justifies ongoing performance measurement and reporting.
- Data was provided on subgroups and demonstrates disparities in care.
- Performance gap is low and appears almost topped out. Data presented has a very large data lag, making it difficult to compare recent performance trends. Disparity in care for race/ethnicity and payer type is discussed.
- Moderate to high gap in performance with disparities noted in race, age and insurance status
- I agree with the preliminary rating of "Moderate".

Criteria 2: Scientific Acceptability of Measure Properties

2a. Reliability: [Specifications](#) and [Testing](#)

2b. Validity: [Testing](#); [Exclusions](#); [Risk-Adjustment](#); [Meaningful Differences](#); [Comparability](#); [Missing Data](#)

Reliability

2a1. Specifications requires the measure, as specified, to produce consistent (reliable) and credible (valid) results about the quality of care when implemented. For maintenance measures – no change in emphasis – specifications should be evaluated the same as with new measures.

2a2. Reliability testing demonstrates if the measure data elements are repeatable, producing the same results a high proportion of the time when assessed in the same population in the same time period and/or that the measure score is precise enough to distinguish differences in performance across providers. For maintenance measures – less emphasis if no new testing data provided.

Validity

2b2. Validity testing should demonstrate the measure data elements are correct and/or the measure score correctly reflects the quality of care provided, adequately identifying differences in quality. For maintenance measures – less emphasis if no new testing data provided.

2b2-2b6. Potential threats to validity should be assessed/addressed.

Questions for the Committee regarding reliability:

- Do you have any concerns that the measure can be consistently implemented (i.e., are measure specifications adequate)?
- The staff or is satisfied with the reliability testing for the measure. Does the Committee think there is a need to discuss and/or vote on reliability?

Questions for the Committee regarding validity:

- Do you have any concerns regarding the validity of the measure (e.g., exclusions, risk-adjustment approach, etc.)?
- The staff or is satisfied with the validity analyses for the measure. Does the Committee think there is a need to discuss and/or vote on validity?

Preliminary rating for reliability: ☐ High ☒ Moderate ☐ Low ☐ Insufficient

Preliminary rating for validity: ☐ High ☐ Moderate ☒ Low ☐ Insufficient

Scientific Acceptability: Preliminary Analysis Form

Measure Number: 0219

Measure Title: Radiation therapy is administered within 1 year (365 days) of diagnosis for women under age 70 receiving breast conserving surgery for breast cancer

Type of measure:

☒ Process ☐ Process: Appropriate Use ☐ Structure ☐ Efficiency ☐ Cost/Resource Use
☐ Outcome ☐ Outcome: PRO-PM ☐ Outcome: Intermediate Clinical Outcome ☐ Composite

Data Source:

☐ Claims ☐ Electronic Health Data ☐ Electronic Health Records ☐ Management Data

- ☐ Assessment Data ☐ Paper Medical Records ☐ Instrument-Based Data ☒ Registry Data
☐ Enrollment Data ☐ Other

Level of Analysis:

- ☐ Clinician: Group/Practice ☐ Clinician: Individual ☒ Facility ☐ Health Plan
☐ Population: Community, County or City ☐ Population: Regional and State
☐ Integrated Delivery System ☐ Other

Measure is:

- ☐ New ☒ Previously endorsed (NOTE: Empirical validity testing is expected at time of maintenance review; if not possible, justification is required.)

RELIABILITY: SPECIFICATIONS

1. Are submitted specifications precise, unambiguous, and complete so that they can be consistently implemented? ☒ Yes ☐ No

Submission document: "MIF_xxxx" document, items S.1-S.22

NOTE: NQF staff will conduct a separate, more technical, check of eCQM specifications, value sets, logic, and feasibility, so no need to consider these in your evaluation.

2. Briefly summarize any concerns about the measure specifications.

RELIABILITY: TESTING

Submission document: "MIF_xxxx" document for specifications, testing attachment questions 1.1-1.4 and section 2a2

3. Reliability testing level ☒ Measure score ☐ Data element ☐ Neither
4. Reliability testing was conducted with the data source and level of analysis indicated for this measure
☒ Yes ☐ No
5. If score-level and/or data element reliability testing was NOT conducted or if the methods used were NOT appropriate, was **empirical VALIDITY testing** of patient-level data conducted?
☐ Yes ☐ No

6. Assess the method(s) used for reliability testing

Submission document: Testing attachment, section 2a2.2

Measure compliance was modeled from 2-level hierarchical logistic regression models using Bayesian shrinkage adjustments that control for random error for both patients and hospitals. Statistical reliability is determined with a binary-outcome from two types of variability, between hospitals (signal) obtained from the regression model and within hospitals (noise) based on the standard error of the proportion of the hospital random effect.

7. Assess the results of reliability testing

Submission document: Testing attachment, section 2a2.3

Developer states that the unadjusted reliability mean coefficient of 0.58, 0.62, and 0.71 for measure #0219 are all regarded as moderate to very good, achieved respectively from diagnosis year 2014, 2015, and 2014-2015.

8. Was the method described and appropriate for assessing the proportion of variability due to real differences among measured entities? NOTE: If multiple methods used, at least one must be appropriate.

Submission document: Testing attachment, section 2a2.2

- ☒ Yes

☐ No

☐ Not applicable (score-level testing was not performed)

9. Was the method described and appropriate for assessing the reliability of ALL critical data elements?

Submission document: Testing attachment, section 2a2.2

☐ Yes

☐ No

☒ Not applicable (data element testing was not performed)

10. **OVERALL RATING OF RELIABILITY** (taking into account precision of specifications and all testing results):

☐ High (NOTE: Can be HIGH only if score-level testing has been conducted)

☒ Moderate (NOTE: Moderate is the highest eligible rating if score-level testing has not been conducted)

☐ Low (NOTE: Should rate LOW if you believe specifications are NOT precise, unambiguous, and complete or if testing methods/results are not adequate)

☐ Insufficient (NOTE: Should rate INSUFFICIENT if you believe you do not have the information you need to make a rating decision)

11. Briefly explain rationale for the rating of OVERALL RATING OF RELIABILITY and any concerns you may have with the approach to demonstrating reliability.

Developer states that the unadjusted reliability mean coefficient of 0.58, 0.62, and 0.71 for measure #0219 are all regarded as moderate to very good.

VALIDITY: ASSESSMENT OF THREATS TO VALIDITY

12. Please describe any concerns you have with measure exclusions.

Submission document: Testing attachment, section 2b2.

No exclusions listed but denominator lists the numerous [exclusions](#).

13. Please describe any concerns you have regarding the ability to identify meaningful differences in performance.

Submission document: Testing attachment, section 2b4.

14. Please describe any concerns you have regarding comparability of results if multiple data sources or methods are specified.

Submission document: Testing attachment, section 2b5.

N/A

15. Please describe any concerns you have regarding missing data.

Submission document: Testing attachment, section 2b6.

No concerns.

16. Risk Adjustment

16a. Risk-adjustment method ☒ None ☐ Statistical model ☐ Stratification

16b. If not risk-adjusted, is this supported by either a conceptual rationale or empirical analyses?

☐ Yes ☐ No ☒ Not applicable

16c. Social risk adjustment:

16c.1 Are social risk factors included in risk model? ☐ Yes ☐ No ☒ Not applicable

16c.2 Conceptual rationale for social risk factors included? ☐ Yes ☐ No

16c.3 Is there a conceptual relationship between potential social risk factor variables and the measure focus? ☐ Yes ☐ No

16d. Risk adjustment summary:

16d.1 All of the risk-adjustment variables present at the start of care? ☐ Yes ☐ No

16d.2 If factors not present at the start of care, do you agree with the rationale provided for inclusion?
☐ Yes ☐ No

16d.3 Is the risk adjustment approach appropriately developed and assessed? ☐ Yes ☐ No

16d.4 Do analyses indicate acceptable results (e.g., acceptable discrimination and calibration)
☐ Yes ☐ No

16d.5. Appropriate risk-adjustment strategy included in the measure? ☐ Yes ☐ No

16e. Assess the risk-adjustment approach: This is a process measure; no rationale required

VALIDITY: TESTING

17. **Validity testing level:** ☐ Measure score ☒ Data element ☐ Both

18. **Method of establishing validity of the measure score:**

☐ Face validity

☒ Empirical validity testing of the measure score

☐ N/A (score-level testing not conducted)

19. **Assess the method(s) for establishing validity**

Submission document: Testing attachment, section 2b2.2

Developer did not run statistical test to assess data quality. Instead, CoC performs annual caseload reviews and cases are reviewed for coding accuracy. This data is submitted annually to maintain hospital accreditation.

Prior 2016 review stated:

- Randomly selected charts were reviewed by site surveyors to determine [completeness and validity of data](#) reported to registry. The measure denominator and numerator were viewed by the clinical constituency within these cancer programs as valid and an appropriate reflection of the standard of care described in NCCN clinical guidelines.

20. **Assess the results(s) for establishing validity**

Submission document: Testing attachment, section 2b2.3

The scope of the evaluation is 10% of the analytic caseload for each program or a maximum of 300 cases annually. Additional validity testing of critical data elements was not performed, though required.

21. **Was the method described and appropriate for assessing conceptually and theoretically sound hypothesized relationships?**

Submission document: Testing attachment, section 2b1.

☐ Yes

☐ No

☒ **Not applicable** (score-level testing was not performed)

22. Was the method described and appropriate for assessing the accuracy of ALL critical data elements?

NOTE that data element validation from the literature is acceptable.

Submission document: Testing attachment, section 2b1.

☐ Yes

☒ No

☐ Not applicable (data element testing was not performed)

23. OVERALL RATING OF VALIDITY taking into account the results and scope of all testing and analysis of potential threats.

☐ High (NOTE: Can be HIGH only if score-level testing has been conducted)

☐ Moderate (NOTE: Moderate is the highest eligible rating if score-level testing has NOT been conducted)

☒ Low (NOTE: Should rate LOW if you believe that there are threats to validity and/or relevant threats to validity were not assessed OR if testing methods/results are not adequate)

☐ Insufficient (NOTE: For instrument-based measures and some composite measures, testing at both the score level and the data element level is required; if not conducted, should rate as INSUFFICIENT.)

24. Briefly explain rationale for rating of OVERALL RATING OF VALIDITY and any concerns you may have with the developers' approach to demonstrating validity.

All threats to validity were not assessed by developer. All critical data elements were not assessed

Committee Pre-evaluation Comments:

Criteria 2: Scientific Acceptability of Measure Properties (including all 2a, 2b, and 2c)

2a1. Reliability-Specifications: Which data elements, if any, are not clearly defined? Which codes with descriptors, if any, are not provided? Which steps, if any, in the logic or calculation algorithm or other specifications (e.g., risk/case-mix adjustment, survey/sampling instructions) are not clear? What concerns do you have about the likelihood that this measure can be consistently implemented?

- No concerns
- Not sure
- No significant concerns about reliability
- No concerns about reliability
- I do not have any concerns about whether the measure can be consistently implemented.
- none
- yes reliable
- The measure is a process measure reported at the facility level. The specifications of the measure are precise and complete. Data elements are from a registry. At the time of submission, data is not complete for 2016 and 2017 and, therefore, data from 2014 and 2015 are analyzed. I believe that, given the measure specifications, the measure can be consistently implemented.
- No concerns at this time
- Data elements are defined clearly. The only concern would be the pitfalls of manually abstracted measurement.
- No concerns that measure can be consistently implemented.
- No concerns

2a2. Reliability - Testing: Do you have any concerns about the reliability of the measure?

- No
- No concern
- No significant concerns about reliability
- no
- I do not have any concerns.
- none to minimal
- No
- No concerns. The testing was conducted at the measure score level. The statistical methods are well-described and reasonable for the testing. The data is presented for 2014 and 2015 collectively and individually using 2-level hierarchical logistic regression models using Bayesian shrinkage adjustments to control for random error for both patients and hospitals per the developers. A signal-to-noise analysis was conducted. Testing was performed using data from 1,421 CoC-accredited hospitals across the United States from 2014-2015. 121,549 cases were considered measure eligible. The unadjusted reliability mean coefficient of 0.58, 0.62, and 0.71 for measure #0219 are all regarded as moderate to very good, achieved respectively from diagnosis year 2014, 2015, and 2014-2015. According to the NQF algorithm, the highest rating for this measure is moderate. The developers appear to have conducted the testing at the measure score and this difference needs to be clarified.
- No concerns
- No
- No concerns
- I agree with the preliminary rating of "Moderate" for Reliability

2b1. Validity -Testing: Do you have any concerns with the testing results?

- No
- No issues
- The results are adequate
- no
- I do not have any concerns.
- none to minimal
- no
- Validity testing was conducted at the data element level. Annually a review of a minimum of 10% of the annual caseload of registry abstracts is performed to verify that abstracted data accuracy. Measure performance is calculated in CP3R and RQRS based on the case-level data submitted by the accredited hospitals. Both the annual caseload reviews and the measure reporting system reviews are intended to ensure that reported performance rates are an accurate reflection of the care provided to patients at CoC-accredited programs. Ninety-five percent confidence intervals were calculated at the hospital-level to determine statistical significance. Each hospital's 95% confidence interval was compared to the aggregate EPR to determine significance. For the three cohorts of diagnosis years, more than half of the programs were not statistically significant compared to aggregate measure compliance; however for those statistically significant programs the majority were statistically greater than the aggregate measure compliance. Overall, only between 5.64% and 9.15% of programs was performing worse when compared to the aggregate. NQF algorithm states that this measure is low due to failure to assess all threats to validity. The attached document to

answer which critical element testing was performed lists the data elements tested. Further discussion regarding if this meets the standard should take place.

- No concerns
- Yes
- No concerns
- I would agree with the preliminary rating of "Low"

2b4-7. Threats to Validity (Statistically Significant Differences, Multiple Data Sources, Missing Data)2b4. Meaningful Differences: How do analyses indicate this measure identifies meaningful differences about quality? 2b5. Comparability of performance scores: If multiple sets of specifications: Do analyses indicate they produce comparable results? 2b6. Missing data/no response: Does missing data constitute a threat to the validity of this measure?

- No
- None
- No major threats to validity.
- no perceived threats to validity
- As far as I can tell, there appears to be no threat to the validity of this measure.
- well understood link to recurrence
- no
- There are no exclusions. The testing is not risk adjusted. The differences reported are likely to reveal meaningful differences in performance among different facilities. Missing data was identified and for each hospital, cases with incomplete data were summed and reported as a proportion of all denominator-eligible and incomplete cases. For 2014-2015 data completeness varied at the hospital-level resulting in a range of 0.26% to 48.00% for the 3.31% of hospitals that had incomplete cases. At the aggregate-level, the proportion of incomplete cases was low, 0.10%, when compared to the number of measure-eligible and incomplete cases. The developers did not feel that this level of missing data would affect the validity of the measure. I believe this is a reasonable assumption.
- No
- Missing data varies center by center in their analysis
- No concerns.
- It does appear that not all threats to validity were assessed by the developer and might require more discussion by the committee.

2b2-3. Other Threats to Validity (Exclusions, Risk Adjustment)2b2. Exclusions: Are the exclusions consistent with the evidence? Are any patients or patient groups inappropriately excluded from the measure?2b3. Risk Adjustment: If outcome (intermediate, health, or PRO-based) or resource use performance measure: Is there a conceptual relationship between potential social risk factor variables and the measure focus? How well do social risk factor variables that were available and analyzed align with the conceptual description provided? Are all of the risk-adjustment variables present at the start of care (if not, do you agree with the rationale provided)? Was the risk adjustment (case-mix adjustment) appropriately developed and tested? Do analyses indicate acceptable results? Is an appropriate risk-adjustment strategy included in the measure?

- I wonder why male breast cancer patients are excluded. They also need radiation after breast conserving surgery. It seems as though the high-risk patients are the ones who seem to be falling into the performance gap for this measure, so I would not recommend risk adjusting.
- the measure is not risk adjusted
- No risk adjustment

- exclusions are appropriate
- I do not feel any patients or patient groups are inappropriately excluded from the measure and believe that the appropriate risk adjustment strategy is included.
- exclusions are appropriate. No risk adjustment performed
- yes all reasonable
- There are no exclusions. There is no risk adjustment.
- No risk adjustment
- N/A
- No Concerns
- It does appear that not all threats to validity were assessed by the developer and might require more discussion by the committee.

Criterion 3. [Feasibility](#)

Maintenance measures – no change in emphasis – implementation issues may be more prominent

3. Feasibility is the extent to which the specifications including measure logic, require data that are readily available or could be captured without undue burden and can be implemented for performance measurement.

Developer states that the data for this measure are key elements already collected in all hospital registries. This measure has been reviewed using cancer registry data. The CoC data demonstrates variation in the measure. The measure is readily implemented.

Developer states that the technical infrastructure to generate and report compliance with this measure has been in place since 2005 for approximately 1,500 Commission on Cancer (CoC) accredited centers performance rates for this measure. This measure is currently reported to CoC accredited programs through the National Cancer Database (NCDB) using the Cancer Program Practice Profile Report (CP3R) web-based audit and feedback reporting tool by registrars submitting new and updated cases annually. In addition, this measure is also reported to 1,500 cancer programs participating in its “real clinical time” feedback reporting tool through its Rapid Quality Reporting System (RQRS) reported daily from registrars in regards to new and updated cases. Both of these reporting tools have been utilized in the cancer registry community and do not produce an undue burden on the data collection network. Also when questions arise about coding or the reporting systems they can consult with NCDB staff via email.

The National Cancer Database (NCDB) captures colon data from 1,421 hospitals across the US with measure-eligible cases from 2014-2015. The availability and usage of electronic health records will vary by hospital. All data elements from accredited institutions are required to be submitted to the NCDB in electronic format following a nationally standardized set of data specifications from the North American Association of Cancer Registries. All accredited hospitals use data abstraction software.

The Commission on Cancer charges an annual accreditation fee to each hospital and includes access to the National Cancer Database and the quality measure reporting tools for no additional charge. The accreditation fee covers the resources needed for measure development as well as the infrastructure used to report the measures.

Above the accreditation fee, hospitals must cover the cost of maintaining a registry, certified tumor registry staff, and abstraction software to submit data to the NCDB. It should be noted that there are State requirements for reporting cancer cases that would already necessitate the costs of maintaining a registry and collecting many of the same data items.

Questions for the Committee:

- Are the required data elements routinely generated and used during care delivery?
- Are the required data elements available in electronic form, e.g., EHR or other electronic sources?
- Is the data collection strategy ready to be put into operational use?

Preliminary rating for feasibility: ☒ High ☐ Moderate ☐ Low ☐ Insufficient

RATIONALE:

Committee Pre-evaluation Comments:

Criteria 3: Feasibility

3. Feasibility: Which of the required data elements are not routinely generated and used during care delivery? Which of the required data elements are not available in electronic form (e.g., EHR or other electronic sources)? What are your concerns about how the data collection strategy can be put into operational use?

- No concerns
- This is an ongoing practice in CoC sites. not applicable to a wide range of non-CoC sites
- No significant issues here
- very feasible
- Not sure why Colon Data is referred to in this section, but I do not have any concerns at this time about feasibility.
- none
- feasible
- The data elements are routinely generated in the course of clinical care. Many of the data elements are not available in an electronic format. The data is from the cancer registry and requires chart audits. I have no concerns that this measure can be put into operational use.
- No concerns
- This metric continues to be feasible because it is mandated registry values, however there will continue to be data lags.
- No concerns about feasibility, data elements routinely collected in EHRs
- I agree with the preliminary rating of "High" for Feasibility.

Criterion 4: [Usability and Use](#)

Maintenance measures – increased emphasis – much greater focus on measure use and usefulness, including both impact/improvement and unintended consequences

4a. Use (4a1. Accountability and Transparency; 4a2. Feedback on measure)

4a. Use evaluate the extent to which audiences (e.g., consumers, purchasers, providers, policymakers) use or could use performance results for both accountability and performance improvement activities.

4a.1. Accountability and Transparency. Performance results are used in at least one accountability application within three years after initial endorsement and are publicly reported within six years after initial

endorsement (or the data on performance results are available). If not in use at the time of initial endorsement, then a credible plan for implementation within the specified timeframes is provided.

Current uses of the measure

Publicly reported? ☒ Yes ☐ No

Current use in an accountability program? ☒ Yes ☐ No ☐ UNCLEAR

OR

Planned use in an accountability program? ☒ Yes ☐ No

Accountability program details

- Public Reporting by the Pennsylvania Health Care Quality Alliance (PHCQA)
- Quality Improvement with Benchmarking by the Commission on Cancer, National Cancer Database
- Regulatory and Accreditation, Commission on Cancer (CoC) Standards

4a.2. Feedback on the measure by those being measured or others. Three criteria demonstrate feedback: 1) those being measured have been given performance results or data, as well as assistance with interpreting the measure results and data; 2) those being measured and other users have been given an opportunity to provide feedback on the measure performance or implementation; 3) this feedback has been considered when changes are incorporated into the measure

Feedback on the measure by those being measured or others

- Cancer measures are developed in a multi-disciplinary setting. Clinical leadership panels work with statisticians, business analysts, and registrars to measure developers to ensure the measures are 1) clinically relevant and 2) have adequate NCDB data to support their development.
- Participating facilities have fostered the development of the CP3R, commenting on the design of the feedback to facilitate utilization of the tools.
- Responses to the RQRS (Rapid Quality Reporting System – a reporting and quality improvement tool for this measure) have been positive. For example, a hospital administrator has stated that he had better physician recruiting with the implementation of this clinical data support system that alerts providers of adjuvant therapy for their patients. Further, an often heard comment is that RQRS has “prevented patients from slipping through the cracks” as the first course of treatment can last a year.
- Site-specific leaders, who are expert clinicians in the care of breast cancer patients, are notified of any potential issues that have been identified in the calculation of this measure. They review the measure for current practice and potential impact of any clinical trials that may impact the measure. Identified issues are communicated to the CoC and changes, if needed, are incorporated into the measure logic. The CoC-accredited hospitals are notified if changes are made and why.

Additional Feedback:

Questions for the Committee:

- How has the measure been vetted in real-world settings by those being measured or others?

Preliminary rating for Use: ☒ Pass ☐ No Pass

RATIONALE:

4b. Usability (4a1. Improvement; 4a2. Benefits of measure)

4b. Usability evaluate the extent to which audiences (e.g., consumers, purchasers, providers, policymakers) use or could use performance results for both accountability and performance improvement activities.

4b.1 Improvement. Progress toward achieving the goal of high-quality, efficient healthcare for individuals or populations is demonstrated.

Improvement results

- Developer states that between 2008 and 2015, aggregate compliance with the breast radiation measure increased from 88.8% to 92.0%. Within race and ethnicity, compliance rates for black (84.3% to 89.1%) and Hispanic (80.2% to 87.6%) patients have improved. For the uninsured/Medicaid patient cohort, the compliance rates moved upward from 82.4% (2008) to 87.2% (2015). By Census region, the Northeast with the lowest aggregate compliance rate improved from 87.2% (2008) to 92.8% (2015).

4b2. Benefits vs. harms.

- Developer states that benefits of the performance measure in facilitating progress toward achieving high-quality, efficient healthcare for individuals or populations outweigh evidence of unintended negative consequences to individuals or populations (if such evidence exists).

Unexpected findings (positive or negative) during implementation

- Developer states that as specified, this measure is susceptible to under-reporting of the adjuvant RT component appearing in the measure numerator. Due to referral of services, access to patient clinical follow-up with radiation oncology may initially be limited or unavailable. However, CoC accredited programs have demonstrated through retrospective case and chart reviews that significant additional and accurate information regarding treatment provided to patients can be ascertained, resulting in higher and clinically more accurate reflections of the care provided or coordinated through their centers. Additionally, the CoC Standards require direct review and oversight of this measure compliance be monitored by an attending physician (Cancer Liaison Physician, CLP) on staff at the center on a quarterly basis.

Potential harms

- Developer did not identify any harms associated with this measure.

Additional Feedback:

Questions for the Committee:

- How can the performance results be used to further the goal of high-quality, efficient healthcare?
- Do the benefits of the measure outweigh any potential unintended consequences?

Preliminary rating for Usability and use: ☒ High ☐ Moderate ☐ Low ☐ Insufficient

RATIONALE:

Committee Pre-evaluation Comments:

Criteria 4: Usability and Use

4a1. Use - Accountability and Transparency: How is the measure being publicly reported? Are the performance results disclosed and available outside of the organizations or practices whose performance is measured? For maintenance measures - which accountability applications is the measure being used for? For new measures - if not in use at the time of initial endorsement, is a credible plan for implementation provided?**4a2. Use - Feedback on the measure:** Have those being measured been given performance results or data, as well as assistance with interpreting the measure results and data? Have those being measured or other users been given an opportunity to provide feedback on the measure performance or implementation? Has this feedback has been considered when changes are incorporated into the measure?

- Measure is being publicly reported. The lag time from collection to reporting makes me wonder if it is useful in terms of performance improvement.
- publicly reported in Pennsylvania
- Currently used in an accountability program
- currently publicly reported and used in an accountability program.
- The measure provides greater benefit than harm.
- publicly reported; part of benchmarking and accreditation
- yes
- This data is in use for several accountability applications. The measure represents the standard of care and using the measure to improve performance.
- Feedback has been considered and incorporated
- Measure is being used as part of internal quality reporting.
- Currently publicly reported in PHCQA, and through CoC Standards, QI benchmarking by the CoC
- No concerns

4b1. Usability – Improvement: How can the performance results be used to further the goal of high-quality, efficient healthcare? If not in use for performance improvement at the time of initial endorsement, is a credible rationale provided that describes how the performance results could be used to further the goal of high-quality, efficient healthcare for individuals or populations?
4b2. Usability – Benefits vs. harms: Describe any actual unintended consequences and note how you think the benefits of the measure outweigh them.

- No concerns
- Limited use, given that the centers using the measure get the data years later.
- No issues here
- no concerns about unintended consequences. unable to assess room for improvement without accurate gap.
- The performance results can improve the goal of high quality.
- benefits are appropriate care; minimal harms except to perhaps patient preference
- Good benefit vs. harms
- This measure represents the current standard of care and has been associated with a 75% reduction in local recurrence rates. The benefits of the measure far outweigh any potential risks associated with implementing the measure. I do not anticipate any unintended consequences related to the use of this measure.
- None
- More timely data would be needed to be able to use the metric for more ongoing performance improvement.
- Improvements noted between 2008 and 2015 but moderate capacity for continued improvements remain.
- I agree with the preliminary rating of "High".

Criterion 5: [Related and Competing Measures](#)

Related or competing measures

None

Harmonization

Not applicable

Committee Pre-evaluation Comments: Criterion 5: Related and Competing Measures

5. Related and Competing: Are there any related and competing measures? If so, are any specifications that are not harmonized? Are there any additional steps needed for the measures to be harmonized?

- None
- None
- I don't think so
- none known
- No additional steps necessary at this time.
- no
- None
- There are no competing or related measures.
- No additional steps needed
- No
- No competing measures.
- None

ADDITIONAL RECOMMENDATIONS

25. If you have listed any concerns in this form, do you believe these concerns warrant further discussion by the multi-stakeholder Standing Committee? If so, please list those concerns below.

Developer Submission

Additional evaluations and submission materials attachments...

Extent to which the specific measure focus is evidence-based, important to making significant gains in healthcare quality, and improving health outcomes for a specific high-priority (high-impact) aspect of healthcare where there is variation in or overall less-than-optimal performance. **Measures must be judged to meet all sub criteria to pass this criterion and be evaluated against the remaining criteria.**

1a. Evidence to Support the Measure Focus – See attached Evidence Submission Form

xxxxxxxxx.docx

1a.1 For Maintenance of Endorsement: Is there new evidence about the measure since the last update/submission?

Do not remove any existing information. If there have been any changes to evidence, the Committee will consider the new evidence. Please use the most current version of the evidence attachment (v7.1). Please use red font to indicate updated evidence.

1a. Evidence (subcriterion 1a)

Measure Number (if previously endorsed): 0219

Measure Title: Radiation therapy is administered within 1 year (365 days) of diagnosis for women under age 70 receiving breast conserving surgery for breast cancer

IF the measure is a component in a composite performance measure, provide the title of the Composite Measure here: N/A

Date of Submission: 11/1/2019

1a.1. This is a measure of: (should be consistent with type of measure entered in De.1)

Outcome

☐ Outcome: Click here to name the health outcome

☐ Patient-reported outcome (PRO): Click here to name the PRO

PROs include HRQoL/functional status, symptom/symptom burden, experience with care, health-related behaviors. (A PRO-based performance measure is not a survey instrument. Data may be collected using a survey instrument to construct a PRO measure.)

☐ Intermediate clinical outcome (e.g., lab value): Click here to name the intermediate outcome

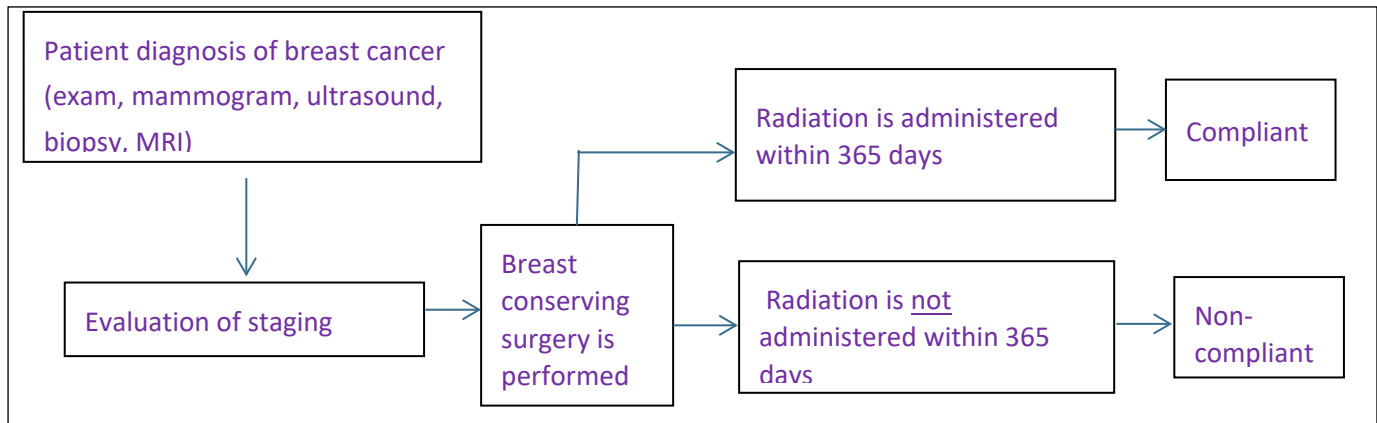

☒ Process: Radiation therapy is administered within 1 year (365 days) of diagnosis for women under age 70 receiving breast conserving surgery for breast cancer

☐ Appropriate use measure: Click here to name what is being measured

☐ Structure: Click here to name the structure

☐ Composite: Click here to name what is being measured

1a.2 LOGIC MODEL Diagram or briefly describe the steps between the healthcare structures and processes (e.g., interventions, or services) and the patient's health outcome(s). The relationships in the diagram should be easily understood by general, non-technical audiences. Indicate the structure, process or outcome being measured.

Identify Problem:	The standard of care states that radiation therapy is recommended for breast cancer patients under 70 years old and receiving breast conserving surgery, however there continues to be patient populations not receiving this care
Goal:	To ensure all breast cancer patients who are under 70 years old and receiving breast conserving surgery, where applicable, undergo radiation therapy within 365 days of diagnosis
Standard of Care:	Radiation therapy is administered within 1 year (365 days) of diagnosis for women under age 70 receiving breast conserving surgery for breast cancer
Inputs	<ul style="list-style-type: none"> • Patient • Clinicians: oncologist, surgeon • Nurses • Radiation therapy • Conserving breast surgery • Commission on Cancer (CoC) Accredited Cancer Program • Registrars • National Cancer Database (NCDB) • Rapid Quality Reporting System (RQRS)
Processes	<ol style="list-style-type: none"> 1. Clinician diagnoses patient with breast cancer <ol style="list-style-type: none"> 1a. Patient Characteristics: <ul style="list-style-type: none"> • 18 – 69 years old • Female • Alive within 365 days of diagnosis 1b. Patient’s Tumor Characteristics: <ul style="list-style-type: none"> • First or only diagnosis of malignant neoplasm • Epithelial • Invasive 2. Clinician recommends radiation therapy as part of first course of treatment to the patient 3. Patient undergoes breast conserving surgery performed by a clinician 4. Radiation therapy is administered to the patient within 365 days of diagnosis 5. Registrar abstracts and submits the patient’s treatment to the CoC’s NCDB and RQRS
Outputs	<ul style="list-style-type: none"> • Radiation therapy is administered within 365 days • Alert are given to programs, within 365 days of diagnosis, notifying them the progress of each patient’s adherence to the measure by sending reminders to give patients radiation therapy
Outcomes	<ul style="list-style-type: none"> • Compliant with the standard of care

Impact	<ul style="list-style-type: none"> “ It reduces the risk of local recurrence in the breast and may have a small impact on survival” (https://www.facs.org/-/media/files/quality-programs/cancer/ncdb/measure-specs-breast.ashx)
--------	--

1a.3 Value and Meaningfulness: IF this measure is derived from patient report, provide evidence that the target population values the measured **outcome, process, or structure** and finds it meaningful. (Describe how and from whom their input was obtained.)

Not Applicable

****RESPOND TO ONLY ONE SECTION BELOW -EITHER 1a.2, 1a.3 or 1a.4) ****

1a.2 FOR OUTCOME MEASURES including PATIENT REPORTED OUTCOMES - Provide empirical data demonstrating the relationship between the outcome (or PRO) to at least one healthcare structure, process, intervention, or service.

Not Applicable

1a.3. SYSTEMATIC REVIEW(SR) OF THE EVIDENCE (for INTERMEDIATE OUTCOME, PROCESS, OR STRUCTURE PERFORMANCE MEASURES, INCLUDING THOSE THAT ARE INSTRUMENT-BASED) If the evidence is not based on a systematic review go to section 1a.4) If you wish to include more than one systematic review, add additional tables.

What is the source of the systematic review of the body of evidence that supports the performance measure? A systematic review is a scientific investigation that focuses on a specific question and uses explicit, prespecified scientific methods to identify, select, assess, and summarize the findings of similar but separate studies. It may include a quantitative synthesis (meta-analysis), depending on the available data. (IOM)

☐ Clinical Practice Guideline recommendation (with evidence review)

☐ US Preventive Services Task Force Recommendation

☐ Other systematic review and grading of the body of evidence (e.g., *Cochrane Collaboration, AHRQ Evidence Practice Center*)

☐ Other

Source of Systematic Review: <ul style="list-style-type: none"> Title Author Date Citation, including page number URL 	Title: National Comprehensive Cancer Network (NCCN) Guidelines v2.2019 Date Created: 07/02/2019 Date Accessed: 07/31/2019 URL: https://www.nccn.org/professionals/physician_gls/pdf/breast.pdf
Quote the guideline or recommendation verbatim about the process, structure or	Radiation to the whole breast with or without boost (by photons, brachytherapy, or electron beam) to tumor bed (category 1).

intermediate outcome being measured. If not a guideline, summarize the conclusions from the SR.	<p>[Additional guidelines for node radiation based on extent of lymph node involvement].</p> <p>Breast irradiation may be omitted in patients ≥ 70 y of age with estrogen-receptor positive, clinically node negative, T1 tumors who receive adjuvant endocrine therapy (category 1)</p>
Grade assigned to the evidence associated with the recommendation with the definition of the grade	Level: I
Provide all other grades and definitions from the evidence grading system	Level: I, IIA, IIB, III
Grade assigned to the recommendation with definition of the grade	Level: I

What harms were identified?	
Identify any new studies conducted since the SR. Do the new studies change the conclusions from the SR?	

1a.4 OTHER SOURCE OF EVIDENCE

If source of evidence is NOT from a clinical practice guideline, USPSTF, or systematic review, please describe the evidence on which you are basing the performance measure.

Not Applicable

1a.4.1 Briefly SYNTHESIZE the evidence that supports the measure. A list of references without a summary is not acceptable.

Not Applicable

1a.4.2 What process was used to identify the evidence?

Not Applicable

1a.4.3. Provide the citation(s) for the evidence.

Not Applicable

1b. Performance Gap

Demonstration of quality problems and opportunity for improvement, i.e., data demonstrating:

- considerable variation, or overall less-than-optimal performance, in the quality of care across providers; and/or
- Disparities in care across population groups.

1b.1. Briefly explain the rationale for this measure (e.g., how the measure will improve the quality of care, the benefits or improvements in quality envisioned by use of this measure)

If a COMPOSITE (e.g., combination of component measure scores, all-or-none, any-or-none), SKIP this question and answer the composite questions.

Improve the utilization of radiation therapy for women under the age of 70 receiving breast conserving surgery for breast cancer

1b.2. Provide performance scores on the measure as specified (current and over time) at the specified level of analysis. *(This is required for maintenance of endorsement. Include mean, std dev, min, max, interquartile range, scores by decile. Describe the data source including number of measured entities; number of patients; dates of data; if a sample, characteristics of the entities include.) This information also will be used to address the sub-criterion on improvement (4b1) under Usability and Use.*

The nationally recognized National Cancer Database (NCDB), jointly sponsored by the American College of Surgeons and the American Cancer Society, is a clinical oncology database sourced from hospital registry data that are collected in about 1,500 Commission on Cancer (CoC)-accredited facilities. NCDB data are used to analyze and track patients with malignant neoplastic diseases, their treatments, and outcomes. Data represent

approximately 80 percent of newly diagnosed breast cancer cases nationwide and 37 million historical records. This analysis uses NCDB data.

The NCDB collects data from CoC accredited cancer programs on an annual basis; the data we collect is in accordance with standard registry procedures. In January of 2018, 2016 diagnoses were collected. This information was released to accredited cancer programs in the late summer. However, we find information on some of the therapies which take longer to be received are not complete upon initial submission and need time to document receipt of adjuvant therapy. Therefore the CoC does not begin surveying or holding programs accountable for their Estimated Performance Rates (EPRs) until the year after it is released to ensure adequate adjuvant therapy information has been documented. We generally see a slight decrease in compliance for the most recent year until programs have had time to collect this information, since we don't feel all adjuvant therapy information are complete at initial submission we did not include the 2016 data in the application for this measure and used the next most recent annual rate of 2015 for this measure.

In 2008, 48,755 cases in 1,469 facilities were in the denominator and the mean estimated performance rate (EPR) was 88.8% (Std.=0.3). IQR=13.7% (85.2%-98.9%), minimum=0.0%, maximum=100.0%. In 2015, 61,051 cases in 1,354 facilities were in the denominator and the mean estimated performance rate (EPR) was 92.0% (Std.=0.3). IQR=8.5% (89.5%-98.0%), minimum=0.0%, maximum=100.0%.

1b.3. If no or limited performance data on the measure as specified is reported in 1b2, then provide a summary of data from the literature that indicates opportunity for improvement or overall less than optimal performance on the specific focus of measurement.

Not Applicable

1b.4. Provide disparities data from the measure as specified (current and over time) by population group, e.g., by race/ethnicity, gender, age, insurance status, socioeconomic status, and/or disability. (*This is required for maintenance of endorsement. Describe the data source including number of measured entities; number of patients; dates of data; if a sample, characteristics of the entities included.*) For measures that show high levels of performance, i.e., "topped out", disparities data may demonstrate an opportunity for improvement/gap in care for certain sub-populations. This information also will be used to address the sub-criterion on improvement (4b1) under Usability and Use.

The data source is described in 1b.2. Disparities shown in demographic comparisons using EPRs were assessed by race/ethnicity, age at diagnosis, insurance status, income and education at the zip code level, facility type, and census region.

Race/Ethnicity

Race/ethnicity was defined as non-Hispanic white, non-Hispanic black, Asian/Hawaiian/Pacific Islander, Hispanic or other/unknown. In all race/ethnicity groups, EPRs were higher in 2015 than in 2008. The differences in EPRs from 2008 to 2015 were as follows: 2.8% for non-Hispanic white, 4.8% for non-Hispanic black, 3.7% for Asian/Hawaiian/Pacific Islander, 7.4% for Hispanic, and 2.4% for other/unknown. In 2015 the lowest EPR was Hispanic (87.6%, 95% CI: 86.6%-88.7%, n=3,815), followed by non-Hispanic black (89.1%, 95% CI: 88.3%-89.8%, n=7,044), other/unknown (90.3%, 95% CI: 89.2%-91.5%, n=2,504), Asian/Hawaiian/Pacific Islander (91.2%, 95% CI: 89.9%-92.4%, n=2,013), and the highest EPR was non-Hispanic whites (93.0%, 95% CI: 92.7%-93.2%, n=45,675). In 2008 the lowest EPR was Hispanic (80.2%, 95% CI: 78.6%-81.7%, n=2,569), followed by non-Hispanic black (84.3%, 95% CI: 83.3%-85.3%, n=5,192), Asian/Hawaiian/Pacific Islander (87.5%, 95% CI: 85.7%-89.3%, n=1,301), other/unknown (87.9%, 95% CI: 87.0%-88.8%, n=4,691), and the highest EPR was non-Hispanic whites (90.2%, 95% CI: 89.9%-90.5%, n=35,002).

Age at Diagnosis

Age at diagnosis was defined as 18-49, 50-59 or 60-69. In all age groups, EPRs were higher in 2015 than in 2008. The differences in EPRs from 2008 to 2015 were as follows: 4.4% for 18-49, 3.7% for 50-59, and 2.0% for 60-69. In 2015 the lowest EPR was 60-69 (91.5%, 95% CI: 91.2%-91.9%, n=27,689), followed by 18-49 (91.7%,

95% CI: 91.2%-92.2%, n=12,298), and the highest EPR was 50-59 (92.8%, 95% CI: 92.5%-93.2%, n=21,064). In 2008 the lowest EPR was 18-49 (87.3%, 95% CI: 86.7%-87.8%, n=13,401), followed by 50-59 (89.1%, 95% CI: 88.7%-89.6%, n=17,333), and the highest EPR was 60-69 (89.5%, 95% CI: 89.1%-90.0%, n=18,021).

Insurance Status

Insurance status was defined as insurance at the time of diagnosis as not insured/Medicaid, private, Medicare, other government and other/unknown. In all insurance status groups, EPRs were higher in 2015 than in 2008, except insurance status group other government. The differences in EPRs from 2008 to 2015 were as follows: 4.8% for not insured/Medicaid, 3.9% for private, 2.0% for Medicare, -0.4% for other government, and 0.7% for other/unknown. In 2015 the lowest EPR was other/unknown (83.1%, 95% CI: 80.7%-85.6%, n=919), followed by not insured/Medicaid (87.2%, 95% CI: 86.3%-88.1%, n=5,095), other government (88.5%, 95% CI: 86.3%-90.7%, n=809), Medicare (90.4%, 95% CI: 89.9%-90.9%, n=14,089), and the highest EPR was private (93.5%, 95% CI: 93.2%-93.7%, n=40,139). In 2008 the lowest EPR was other/unknown (82.4%, 95% CI: 79.4%-85.4%, n=618), followed by not insured/Medicaid (82.4%, 95% CI: 81.2%-83.7%, n=3,387), Medicare (88.4%, 95% CI: 87.7%-89.0%, n=8,373), other government (88.9%, 95% CI: 86.1%-91.6%, n=504), and the highest EPR was private (89.6%, 95% CI: 89.3%-89.9%, n=35,873).

Median Income Quintile

Median income quintiles was defined as <\$36,000, \$36,000-\$43,999, \$44,000-\$52,999, \$53,000-\$68,999, \$69,000+ or other/unknown, based on the 2012 American Community Survey at the zip code level. In all median income quintiles, EPRs were higher in 2015 than in 2008. The differences in EPRs from 2008 to 2015 were as follows: 3.6% for <\$36,000, 2.5% for \$36,000-\$43,999, 2.1% for \$44,000-\$52,999, 2.7% for \$53,000-\$68,999, 4.5% for \$69,000+, and 3.7% for other/unknown. In 2015 the lowest EPR was other/unknown (87.2%, 95% CI: 83.1%-91.3%, n=250), followed by <\$36,000 (90.1%, 95% CI: 89.3%-90.8%, n=6,446), \$36,000-\$43,999 (91.1%, 95% CI: 90.5%-91.7%, n=9,146), \$44,000-\$52,999 (91.3%, 95% CI: 90.8%-91.8%, n=11,130), \$53,000-\$68,999 (92.2%, 95% CI: 91.7%-92.6%, n=15,079), and the highest EPR was \$69,000+ (93.5%, 95% CI: 93.2%-93.9%, n=19,000). In 2008 the lowest EPR was other/unknown (83.5%, 95% CI: 80.3%-86.8%, n=504), followed by <\$36,000 (86.5%, 95% CI: 85.6%-87.4%, n=5,297), \$36,000-\$43,999 (88.6%, 95% CI: 87.9%-89.3%, n=7,284), \$69,000+ (89.0%, 95% CI: 88.5%-89.5%, n=14,904), \$44,000-\$52,999 (89.2%, 95% CI: 88.6%-89.9%, n=9,000), and the highest EPR was \$53,000-\$68,999 (89.5%, 95% CI: 88.9%-90.0%, n=11,766).

Median Education Quartile

Median education quartile was defined as <7.0% with no high school degree, 7.0%-12.9%, 13.0%-20.9%, 21.0%+ or other/unknown, based on the 2012 American Community Survey at the zip code level. In all median education quintiles, EPRs were higher in 2015 than in 2008. The differences in EPRs from 2008 to 2015 were as follows: 3.7% for <7.0%, 2.8% for 7.0%-12.9%, 2.5% for 13.0%-20.9%, 4.3% for 21.0%+, and 4.3% for other/unknown. In 2015 the lowest EPR other/unknown (87.4%, 95% CI: 83.1%-91.7%, n=230), followed by 21.0%+ (89.0%, 95% CI: 88.4%-89.7%, n=8,563), 13.0%-20.9% (91.1%, 95% CI: 90.6%-91.5%, n=13,992), 7.0%-12.9% (92.5%, 95% CI: 92.1%-92.8%, n=20,261), and the highest EPR was <7.0% (93.8%, 95% CI: 93.4%-94.1%, n=18,005). In 2008 the lowest EPR was other/unknown (83.1%, 95% CI: 79.8%-86.5%, n=474), followed by 21.0%+ (84.7%, 95% CI: 83.8%-85.5%, n=7,116), 13.0%-20.9% (88.6%, 95% CI: 88.0%-89.2%, n=10,877), 7.0%-12.9% (89.7%, 95% CI: 89.2%-90.1%, n=16,163), and the highest EPR was <7.0% (90.1%, 95% CI: 89.6%-90.6%, n=14,125).

Facility Type

Facility type was defined by program's CoC-accreditation status as academic cancer programs, community cancer programs, comprehensive community cancer programs, integrated network cancer programs, NCI & PPS-Exempt cancer programs and other/unknown cancer programs. In all facility types, EPRs were higher in 2015 than in 2008. The differences in EPRs from 2008 to 2015 were as follows: 5.1% for academic cancer programs, 2.0% for community cancer programs, 1.2% for comprehensive community cancer programs, 2.4% for integrated network cancer programs, 5.7% for NCI & PPS-Exempt cancer programs, and 12.5% for other/unknown cancer programs. In 2015 the lowest EPR was community cancer programs (89.8%, 95% CI:

89.0%-90.5%, n=6,297), followed by academic cancer programs (92.0%, 95% CI: 91.6%-92.5%, n=13,539), comprehensive community cancer programs (92.1%, 95% CI: 91.8%-92.4%, n=27,481), NCI & PPS-Exempt cancer programs (92.2%, 95% CI: 91.5%-92.8%, n=6,716), other/unknown cancer programs (93.2%, 95% CI: 91.1%-95.3%, n=547), and the highest EPR was integrated network cancer programs (93.5%, 95% CI: 92.9%-94.1%, n=6,471). In 2008 the lowest EPR was other/unknown cancer programs (80.7%, 95% CI: 79.4%-82.0%, n=3,702), followed by NCI & PPS-Exempt cancer programs (86.5%, 95% CI: 85.4%-87.6%, n=3,718), academic cancer programs (86.9%, 95% CI: 86.2%-87.6%, n=9,348), community cancer programs (87.8%, 95% CI: 86.9%-88.8%, n=4,342), comprehensive community cancer programs (90.9%, 95% CI: 90.5%-91.3%, n=21,093), and the highest EPR was integrated network cancer programs (91.1%, 95% CI: 90.4%-91.7%, n=6,552).

Census Region

Census Region was defined as Northeast, South, Midwest, West, Pacific or missing/out of US. In all census regions, EPRs were higher in 2015 than in 2008. The differences in EPRs from 2008 to 2015 were as follows: 5.6% for Northeast, 2.8% for South, 1.7% for Midwest, 3.6% for West, 3.2% for Pacific, and 6.4% for missing/out of US. In 2015 the lowest EPR was missing/out of US (81.8%, 95% CI: 76.5%-87.1%, n=203), followed by Pacific (90.5%, 95% CI: 89.9%-91.1%, n=7,894), South (90.6%, 95% CI: 90.2%-91.0%, n=20,878), West (90.8%, 95% CI: 89.8%-91.9%, n=2,947), Northeast (92.8%, 95% CI: 92.4%-93.3%, n=14,102), and the highest EPR was Midwest (94.4%, 95% CI: 94.0%-94.8%, n=15,027). In 2008 the lowest EPR was missing/out of US (75.4%, 95% CI: 67.7%-83.2%, n=118), followed by Northeast (87.2%, 95% CI: 86.6%-87.8%, n=11,124), West (87.2%, 95% CI: 85.8%-88.6%, n=2,289), Pacific (87.3%, 95% CI: 86.5%-88.1%, n=6,838), South (87.8%, 95% CI: 87.3%-88.3%, n=16,254), and the highest EPR was Midwest (92.7%, 95% CI: 92.3%-93.2%, n=12,132).

1b.5. If no or limited data on disparities from the measure as specified is reported in 1b.4, then provide a summary of data from the literature that addresses disparities in care on the specific focus of measurement. Include citations. Not necessary if performance data provided in 1b.4

Not Applicable

...

2. Reliability and Validity—Scientific Acceptability of Measure Properties

Extent to which the measure, as specified, produces consistent (reliable) and credible (valid) results about the quality of care when implemented. **Measures must be judged to meet the sub criteria for both reliability and validity to pass this criterion and be evaluated against the remaining criteria.**

2a.1. Specifications The measure is well defined and precisely specified so it can be implemented consistently within and across organizations and allows for comparability. eMeasures should be specified in the Health Quality Measures Format (HQMF) and the Quality Data Model (QDM).

De.5. Subject/Topic Area (check all the areas that apply):

Cancer, Cancer : Breast

De.6. Non-Condition Specific(check all the areas that apply):

Care Coordination, Disparities Sensitive

De.7. Target Population Category (Check all the populations for which the measure is specified and tested if any):

Elderly

S.1. Measure-specific Web Page (Provide a URL link to a web page specific for this measure that contains current detailed specifications including code lists, risk model details, and supplemental materials. Do not enter a URL linking to a home page or to general information.)

See pages 3-8: https://www.facs.org/~media/files/quality_programs/cancer/ncdb/measure_specs_breast.ashx

S.2a. If this is an eMeasure, HQMF specifications must be attached. Attach the zipped output from the eMeasure authoring tool (MAT) - if the MAT was not used, contact staff. (Use the specification fields in this online form for the plain-language description of the specifications)

This is not an eMeasure Attachment:

S.2b. Data Dictionary, Code Table, or Value Sets (and risk model codes and coefficients when applicable) must be attached. (Excel or csv file in the suggested format preferred - if not, contact staff)

No data dictionary Attachment:

S.2c. Is this an instrument-based measure (i.e., data collected via instruments, surveys, tools, questionnaires, scales, etc.)? Attach copy of instrument if available.

No, this is not an instrument-based measure Attachment:

S.2d. Is this an instrument-based measure (i.e., data collected via instruments, surveys, tools, questionnaires, scales, etc.)? Attach copy of instrument if available.

Not an instrument-based measure

S.3.1. For maintenance of endorsement: Are there changes to the specifications since the last updates/submission. If yes, update the specifications for S1-2 and S4-22 and explain reasons for the changes in S3.2.

Yes

S.3.2. For maintenance of endorsement, please briefly describe any important changes to the measure specifications since last measure update and explain the reasons.

The following changes are due to the American Joint Committee on Cancer (AJCC) 8th edition staging manual, the Commission on Cancer's Standards for Oncology Registry Entry (STORE) coding manual and North American Association of Central Cancer Registry (NAACCR) updates and applies to cases diagnosed on and after January 1, 2018:

Stageable epithelial tumors histology [NAACCR Item# 522] = 8022, 8032, 8035, 8041, 8070, 8200, 8201, 8211, 8246, 8290, 8314, 8315, 8410, 8430, 8480, 8500, 8502, 8503, 8504, 8507, 8509, 8510, 8513, 8520, 8525, 8530, 8540, 8550, 8570, 8571, 8572, 8574, 8575, 8982, 8983, 8000, 8010, 8140, 8255, 8401, 8501, 8521, 8522, 8523, 8524, 8541, 8543

AJCC clinical stage group [NAACCR Item# 1004] ? 0, 4 when AJCC pathologic stage group [NAACCR Item# 1014] = 88, 99

AJCC pathologic stage group [NAACCR Item# 1014] ? 0, 4

AJCC clinical M [NAACCR Item# 1003] ? cM1, pM1

AJCC pathologic M [NAACCR Item# 1013] ? cM1, pM1

Radiation treatment:

Phase I radiation treatment modality [NAACCR Item# 1506] = 01-16

or

Phase I radiation treatment modality [NAACCR Item# 1506] = 99 AND Phase I radiation primary treatment volume [NAACCR Item# 1504] = 40, 41

S.4. Numerator Statement (Brief, narrative description of the measure focus or what is being measured about the target population, i.e., cases from the target population with the target process, condition, event, or outcome) DO NOT include the rationale for the measure.

IF an OUTCOME MEASURE, state the outcome being measured. Calculation of the risk-adjusted outcome should be described in the calculation algorithm (S.14).

Radiation therapy is administered within 1 year (365 days) of the date of diagnosis

S.5. Numerator Details *(All information required to identify and calculate the cases from the target population with the target process, condition, event, or outcome such as definitions, time period for data collection, specific data collection items/responses, code/value sets – Note: lists of individual codes with descriptors that exceed 1 page should be provided in an Excel or csv file in required format at S.2b)*

IF an OUTCOME MEASURE, describe how the observed outcome is identified/counted. Calculation of the risk-adjusted outcome should be described in the calculation algorithm (S.14).

Radiation treatment is administered (phase I radiation treatment modality [NAACCR Item# 1506] = 01-16, or phase I radiation treatment modality [NAACCR Item# 1506] = 99 AND phase I radiation primary treatment volume [NAACCR Item# 1504] = 40, 41), AND date radiation therapy started [NAACCR Item# 1210] ≤ 365 days following date of initial diagnosis [NAACCR Item# 390]

S.6. Denominator Statement *(Brief, narrative description of the target population being measured)*

Include if all of the following characteristics are identified:

Women

Age = 18 and < 70 at time of diagnosis

Known or assumed to be first or only cancer diagnosis

Epithelial malignancy only

Invasive tumors

Primary tumors of the breast

All or part of 1st course of treatment performed at the reporting facility

Known to be alive within 1 year (365 days) of date of diagnosis

Receipt of breast conserving surgery

S.7. Denominator Details *(All information required to identify and calculate the target population/denominator such as definitions, time period for data collection, specific data collection items/responses, code/value sets – Note: lists of individual codes with descriptors that exceed 1 page should be provided in an Excel or csv file in required format at S.2b.)*

IF an OUTCOME MEASURE, describe how the target population is identified. Calculation of the risk-adjusted outcome should be described in the calculation algorithm (S.14).

Sex [NAACCR Item# 220] = 2

Age at diagnosis [NAACCR Item# 230] = 018 and < 070

Known or assumed to be first or only cancer diagnosis [NAACCR Item# 560] = 00, 01

Stageable epithelial tumor ICD-O codes in the AJCC 8th Edition staging manual [NAACCR Item# 522] = 8022, 8032, 8035, 8041, 8070, 8200, 8201, 8211, 8246, 8290, 8314, 8315, 8410, 8430, 8480, 8500, 8502, 8503, 8504, 8507, 8509, 8510, 8513, 8520, 8525, 8530, 8540, 8550, 8570, 8571, 8572, 8574, 8575, 8982, 8983, 8000, 8010, 8140, 8255, 8401, 8501, 8521, 8522, 8523, 8524, 8541, 8543

Invasive tumor behavior [NAACCR Item# 523] = 3

Primary tumors of the breast [NAACCR Item# 400] = C50.0, C50.1, C50.2, C50.3, C50.4, C50.5, C50.6, C50.8, C50.9

AJCC clinical stage group [NAACCR Item# 1004] ? 0, 4 when AJCC pathologic stage group [NAACCR Item# 1014] = 88, 99

AJCC pathologic stage group [NAACCR Item# 1014] ? 0, 4

AJCC clinical M [NAACCR Item#1003] ? cM1, pM1

AJCC pathologic M [NAACCR Item#1013] ? cM1, pM1

All or part of 1st course of treatment performed at the reporting facility [NAACCR Item# 610] = 10-22

Known to be alive within 1 year (365 days) of date of diagnosis: vital status [NAACCR Item# 1760] = 1 AND date of last contact or death [NAACCR Item# 1750] – date of initial diagnosis [NAACCR Item# 390] > 365

Surgical Procedure of the Primary Site (breast conserving surgery) [NAACCR Item# 1290] = 20–24

S.8. Denominator Exclusions *(Brief narrative description of exclusions from the target population)*

Exclude, if any of the following characteristics are identified:

Men

Under age 18 or over 69 at time of diagnosis

Second or subsequent cancer diagnosis

Tumor not originating in the breast

Non-epithelial malignancies, exclude rare tumors: 8940 - Mixed tumor, malignant, NOS; 8950 - Mullerian mixed tumor; 8980 - Carcinosarcoma; 8981 - Carcinosarcoma, embryonal

Non-invasive tumor

Stage 0, in-situ tumor

Stage IV, metastatic tumor

None of 1st course therapy performed at reporting facility

Breast conserving surgery was not received

Died within 1 year (365 days) of diagnosis

Patient enrolled in a clinical trial that directly impacts delivery of the standard of care

S.9. Denominator Exclusion Details *(All information required to identify and calculate exclusions from the denominator such as definitions, time period for data collection, specific data collection items/responses, code/value sets – Note: lists of individual codes with descriptors that exceed 1 page should be provided in an Excel or csv file in required format at S.2b.)*

See pages 3-8: https://www.facs.org/~media/files/quality_programs/cancer/ncdb/measure_specs_breast.ashx

S.10. Stratification Information *(Provide all information required to stratify the measure results, if necessary, including the stratification variables, definitions, specific data collection items/responses, code/value sets, and the risk-model covariates and coefficients for the clinically-adjusted version of the measure when appropriate – Note: lists of individual codes with descriptors that exceed 1 page should be provided in an Excel or csv file in required format with at S.2b.)*

No stratification applied

S.11. Risk Adjustment Type (Select type. Provide specifications for risk stratification in measure testing attachment)

No risk adjustment or risk stratification

If other:

S.12. Type of score:

Rate/proportion

If other:

S.13. Interpretation of Score *(Classifies interpretation of score according to whether better quality is associated with a higher score, a lower score, a score falling within a defined interval, or a passing score)*

Better quality = Higher score

S.14. Calculation Algorithm/Measure Logic *(Diagram or describe the calculation of the measure score as an ordered sequence of steps including identifying the target population; exclusions; cases meeting the target process, condition, event, or outcome; time period for data, aggregating data; risk adjustment; etc.)*

See pages 3-8: https://www.facs.org/~media/files/quality_programs/cancer/ncdb/measure_specs_breast.ashx

S.15. Sampling *(If measure is based on a sample, provide instructions for obtaining the sample and guidance on minimum sample size.)*

IF an instrument-based performance measure (e.g., PRO-PM), identify whether (and how) proxy responses are allowed.

Not Applicable

S.16. Survey/Patient-reported data *(If measure is based on a survey or instrument, provide instructions for data collection and guidance on minimum response rate.)*

Specify calculation of response rates to be reported with performance measure results.

Not Applicable

S.17. Data Source *(Check ONLY the sources for which the measure is SPECIFIED AND TESTED).*

If other, please describe in S.18.

Registry Data

S.18. Data Source or Collection Instrument *(Identify the specific data source/data collection instrument (e.g. name of database, clinical registry, collection instrument, etc., and describe how data are collected.)*

IF instrument-based, identify the specific instrument(s) and standard methods, modes, and languages of administration.

Hospital cancer registry data, reported to the American College of Surgeons' Commission on Cancer, National Cancer Database

S.19. Data Source or Collection Instrument *(available at measure-specific Web page URL identified in S.1 OR in attached appendix at A.1)*

Available at measure-specific web page URL identified in S.1

S.20. Level of Analysis *(Check ONLY the levels of analysis for which the measure is SPECIFIED AND TESTED)*

Facility

S.21. Care Setting *(Check ONLY the settings for which the measure is SPECIFIED AND TESTED)*

Inpatient/Hospital

If other:

S.22. COMPOSITE Performance Measure - Additional Specifications *(Use this section as needed for aggregation and weighting rules, or calculation of individual performance measures if not individually endorsed.)*

Not Applicable

2. Validity – See attached Measure Testing Submission Form

[BCSRT_testing.docx](#)

2.1 For maintenance of endorsement

Reliability testing: If testing of reliability of the measure score was not presented in prior submission(s), has reliability testing of the measure score been conducted? If yes, please provide results in the Testing attachment. Please use the most current version of the testing attachment (v7.1). Include information on all testing conducted (prior testing as well as any new testing); use red font to indicate updated testing.

Yes

2.2 For maintenance of endorsement

Has additional empirical validity testing of the measure score been conducted? If yes, please provide results in the Testing attachment. Please use the most current version of the testing attachment (v7.1). Include information on all testing conducted (prior testing as well as any new testing); use red font to indicate updated testing.

Yes

2.3 For maintenance of endorsement

Risk adjustment: For outcome, resource use, cost, and some process measures, risk-adjustment that includes social risk factors is not prohibited at present. Please update sections 1.8, 2a2, 2b1, 2b4.3 and 2b5 in the Testing attachment and S.140 and S.11 in the online submission form. NOTE: These sections must be updated even if social risk factors are not included in the risk-adjustment strategy. You MUST use the most current version of the Testing Attachment (v7.1) -- older versions of the form will not have all required questions.

No - This measure is not risk-adjusted

Measure Testing (subcriteria 2a2, 2b1-2b6)

Measure Number (if previously endorsed): 0219

Measure Title: Radiation therapy is administered within 1 year (365 days) of diagnosis for women under age 70 receiving breast conserving surgery for breast cancer

Date of Submission: August 1, 2019

Type of Measure:

<input type="checkbox"/> Outcome (including PRO-PM)	<input type="checkbox"/> Composite – STOP – use composite testing form
<input type="checkbox"/> Intermediate Clinical Outcome	<input type="checkbox"/> Cost/resource
<input checked="" type="checkbox"/> Process (including Appropriate Use)	<input type="checkbox"/> Efficiency
<input type="checkbox"/> Structure	

1. DATA/SAMPLE USED FOR ALL TESTING OF THIS MEASURE

Often the same data are used for all aspects of measure testing. In an effort to eliminate duplication, the first five questions apply to all measure testing. If there are differences by aspect of testing, (e.g., reliability vs. validity) be sure to indicate the specific differences in question 1.7.

1.1. What type of data was used for testing? (Check all the sources of data identified in the measure specifications and data used for testing the measure. Testing must be provided for all the sources of data specified and intended for measure implementation. **If different data sources are used for the numerator and denominator, indicate N [numerator] or D [denominator] after the checkbox.**)

Measure Specified to Use Data From: (must be consistent with data sources entered in S.17)	Measure Tested with Data From:
<input type="checkbox"/> abstracted from paper record	<input type="checkbox"/> abstracted from paper record
<input type="checkbox"/> claims	<input type="checkbox"/> claims
<input checked="" type="checkbox"/> registry	<input checked="" type="checkbox"/> registry
<input type="checkbox"/> abstracted from electronic health record	<input type="checkbox"/> abstracted from electronic health record
<input type="checkbox"/> eMeasure (HQMf) implemented in EHRs	<input type="checkbox"/> eMeasure (HQMf) implemented in EHRs
<input type="checkbox"/> other: Click here to describe	<input type="checkbox"/> other: Click here to describe

1.2. If an existing dataset was used, identify the specific dataset (*the dataset used for testing must be consistent with the measure specifications for target population and healthcare entities being measured; e.g., Medicare Part A claims, Medicaid claims, other commercial insurance, nursing home MDS, home health OASIS, clinical registry*).

The nationally recognized National Cancer Database (NCDB), jointly sponsored by the American College of Surgeons and the American Cancer Society, is a clinical oncology database sourced from hospital registry data that are collected in approximately 1,500 Commission on Cancer (CoC)-accredited facilities. NCDB data are used to analyze and track patients with malignant neoplastic diseases, their treatments, and outcomes. Data represent approximately 80 percent of newly diagnosed breast cancer cases nationwide.

The NCDB collects data from CoC-accredited cancer programs on an annual basis; the data collected is in accordance with standard registry procedures. In January of 2019, 2016 diagnoses were processed and included in the data warehouse. As of this submission, 2017 diagnoses were not yet processed. We find information on some of the therapies which take longer to receive are not complete upon initial submission and need time to document receipt of adjuvant therapy. Therefore the CoC does not begin surveying or holding programs accountable for their performance rates until the year after it is released to ensure adequate adjuvant therapy information has been documented. We generally see a slight decrease in compliance for the most recent data year until programs have had time to submit treatment data and as such 2016 data were not included. Throughout this testing document, there are three patient cohorts presented, which represent combined 2014 and 2015 diagnoses, and 2014 and 2015 separately.

1.3. What are the dates of the data used in testing? [Click here to enter date range](#)

January 1, 2014-December 31, 2015

1.4. What levels of analysis were tested? (*testing must be provided for all the levels specified and intended for measure implementation, e.g., individual clinician, hospital, health plan*)

Measure Specified to Measure Performance of: (<i>must be consistent with levels entered in item S.20</i>)	Measure Tested at Level of:
<input type="checkbox"/> individual clinician	<input type="checkbox"/> individual clinician
<input type="checkbox"/> group/practice	<input type="checkbox"/> group/practice
<input checked="" type="checkbox"/> hospital/facility/agency	<input checked="" type="checkbox"/> hospital/facility/agency
<input type="checkbox"/> health plan	<input type="checkbox"/> health plan
<input type="checkbox"/> other: Click here to describe	<input type="checkbox"/> other: Click here to describe

1.5. How many and which measured entities were included in the testing and analysis (by level of analysis and data source)? (*identify the number and descriptive characteristics of measured entities included in the analysis (e.g., size, location, type); if a sample was used, describe how entities were selected for inclusion in the sample*)

Testing for measure #0219 was performed with 1,421 Commission on Cancer- accredited hospitals across the United States from 2014-2015.

Diagnosis Year(s)	2014 - 2015	2014	2015
Hospital N	1,421	1,400	1,354
Range of Cases per Hospital	1 - 1,766	1 - 897	1 - 869

Hospital Category Type	Academic	189 (13.30%)	185 (13.21%)	188 (13.88%)
	Community	397 (27.94%)	391 (27.93%)	388 (28.66%)
	Comprehensive Community	571 (40.18%)	563 (40.21%)	560 (41.36%)
	Integrated Network	153 (10.77%)	152 (10.86%)	149 (11.00%)
	NCI & PPS-Exempt	45 (3.17%)	45 (3.21%)	44 (3.25%)
	Other	66 (4.64%)	64 (4.57%)	25 (1.85%)

1.6. How many and which patients were included in the testing and analysis (by level of analysis and data source)? (identify the number and descriptive characteristics of patients included in the analysis (e.g., age, sex, race, diagnosis); if a sample was used, describe how patients were selected for inclusion in the sample)

The 2014-2015 testing data included 121,549 cases, all of which are measure-eligible.

Diagnosis Year(s)		2014 - 2015	2014	2015
Case N		121,549	60,498	61,051
Race/ Ethnicity	Non-Hispanic White	90,861 (74.75%)	45,186 (74.69%)	45,675 (74.81%)
	Non-Hispanic Black	14,233 (11.71%)	7,189 (11.88%)	7,044 (11.54%)
	Asian, Hawaiian, Pacific Islander	3,845 (3.16%)	1,832 (3.03%)	2,013 (3.30%)
	Hispanic	7,442 (6.12%)	3,627 (6.00%)	3,815 (6.25%)
	Other	5,168 (4.25%)	2,664 (4.40%)	2,504 (4.10%)
Age at Diagnosis	18 - 49	24,671 (20.30%)	12,373 (20.45%)	12,298 (20.14%)
	50 - 59	42,380 (34.87%)	21,316 (35.23%)	21,064 (34.50%)
	60 - 69	54,498 (44.84%)	26,809 (44.31%)	27,689 (45.35%)
Insurance Status	Not Insured, Medicaid	10,261 (8.44%)	5,166 (8.54%)	5,095 (8.35%)
	Private	80,241 (66.02%)	40,102 (66.29%)	40,139 (65.75%)
	Medicare	27,714 (22.80%)	13,625 (22.52%)	14,089 (23.08%)
	Other Government	1,550 (1.28%)	741 (1.22%)	809 (1.33%)
	Other/Unknown	1,783 (1.47%)	864 (1.43%)	919 (1.51%)

1.7. If there are differences in the data or sample used for different aspects of testing (e.g., reliability, validity, exclusions, risk adjustment), identify how the data or sample are different for each aspect of testing reported below.

Not Applicable

1.8 What were the social risk factors that were available and analyzed? For example, patient-reported data (e.g., income, education, language), proxy variables when social risk data are not collected from each patient

(e.g. census tract), or patient community characteristics (e.g. percent vacant housing, crime rate) which do not have to be a proxy for patient-level data.

Not Applicable

2a2. RELIABILITY TESTING

Note: If accuracy/correctness (validity) of data elements was empirically tested, separate reliability testing of data elements is not required – in 2a2.1 check critical data elements; in 2a2.2 enter “see section 2b2 for validity testing of data elements”; and skip 2a2.3 and 2a2.4.

2a2.1. What level of reliability testing was conducted? (may be one or both levels)

☐ Critical data elements used in the measure (e.g., inter-abstractor reliability; data element reliability must address ALL critical data elements)

☒ Performance measure score (e.g., signal-to-noise analysis)

2a2.2. For each level checked above, describe the method of reliability testing and what it tests (describe the steps—do not just name a method; what type of error does it test; what statistical analysis was used)

There are three characteristics that generally inform the reliability of a measure including hospital-level performance, the variability of performance differences across hospitals, and case volume. In an effort to illustrate the impact of performance and volume, reliability is presented in three ways. Three patient cohorts constructed represent combined 2014 and 2015 diagnoses, and 2014 and 2015 separately. Reliability results are shown for each cohort. Within each cohort, data model reliability estimations are shown computed from both unadjusted and risk-adjusted models. Risk-adjustment included patient characteristics of age at diagnosis, race/ethnicity, and insurance status.

Measure compliance was modeled from 2-level hierarchical logistic regression models using Bayesian shrinkage adjustments that control for random error for both patients and hospitals. Statistical reliability is determined with a binary-outcome from two types of variability, between hospitals (signal) obtained from the regression model and within hospitals (noise) based on the standard error of the proportion of the hospital random effect. Reliability is presented here on a scale from 0 to 1 from a range indicating measurement error to true differences in hospital performance. Statistical reliability was converted from the log-odds scale to the probability scale through the hierarchical method of calculation as described by Deutsch et al. and referenced in other publications^{1 2 3 4 5}.

2a2.3. For each level of testing checked above, what were the statistical results from reliability testing? (e.g., percent agreement and kappa for the critical data elements; distribution of reliability statistics from a signal-to-noise analysis)

Diagnosis Year(s)	Denominator	Numerator	Hospital N	Unadjusted Reliability Mean	Unadjusted Reliability Median	Adjusted Reliability Mean ¹	Adjusted Reliability Median ¹	Mean Cases (per hospital)	Aggregate Compliance Rate
2014 - 2015	121,549	112,380	1,421	0.71	0.78	0.70	0.77	85.54	92.46%
2014	60,498	56,198	1,400	0.58	0.61	0.56	0.59	43.21	92.89%
2015	61,051	56,182	1,354	0.62	0.67	0.61	0.65	45.09	92.02%
¹ Adjusted for age at diagnosis, race/ethnicity and insurance status									

2a2.4 What is your interpretation of the results in terms of demonstrating reliability? (i.e., what do the results mean and what are the norms for the test conducted?)

The unadjusted reliability mean coefficient of 0.58, 0.62, and 0.71 for measure #0219 are all regarded as moderate to very good, achieved respectively from diagnosis year 2014, 2015, and 2014-2015.

2b1. VALIDITY TESTING

2b1.1. What level of validity testing was conducted? (may be one or both levels)

- ☒ **Critical data elements** (data element validity must address ALL critical data elements)
- ☐ **Performance measure score**
 - ☐ Empirical validity testing
 - ☐ Systematic assessment of face validity of performance measure score as an indicator of quality or resource use (i.e., is an accurate reflection of performance on quality or resource use and can distinguish

good from poor performance) **NOTE:** Empirical validity testing is expected at time of maintenance review; if not possible, justification is required.

2b1.2. For each level of testing checked above, describe the method of validity testing and what it tests *(describe the steps—do not just name a method; what was tested, e.g., accuracy of data elements compared to authoritative source, relationship to another measure as expected; what statistical analysis was used)*

Each year, a review of a minimum of 10% of the annual caseload of registry abstracts is performed to verify that abstracted data correctly reflect the information documented in individual patient records, and that the patient's medical condition, care, and participation in treatment decision-making processes are accurate. The abstracted elements reviewed include but are not limited to primary site, staging, first-course treatment, follow-up, and the percentage of data coded as unknown. These procedures are part of the Commission on Cancer's (CoC) Standard 1.6, which is required to maintain accreditation. Each of the following steps must be followed in order to be rated as compliant with this Standard. 1) The cancer committee establishes and implements a quality control plan. 2) The registry quality coordinator works cooperatively with registry staff to maintain a quality control plan. The focus of this plan is to establish data quality benchmarks that include monitoring of abstracting timeliness, accuracy of data, a review of data coded as unknown. 3) The findings are to be reported to the cancer committee annually and 4) the findings are documented in the cancer committee minutes.

These annual caseload reviews inform the data submitted to the National Cancer Database (NCDB) and are subsequently used in the Cancer Program Practice Profile Reports (CP3R) system and Rapid Quality Reporting System (RQRS) measure reporting systems; RQRS shows the performance rates for the five CoC National Quality Forum endorsed measures. Every breast cancer case is submitted from the reporting facility to the NCDB, and is applied to the measure in these reporting systems. In addition to the annual caseload reviews noted above, both reporting systems allow hospitals to review every case for coding accuracy which includes those deemed non-eligible, incomplete, measure denominator eligible, along with numerator compliant and non-compliant cases.

Measure performance is calculated in CP3R and RQRS based on the case-level data submitted by the accredited hospitals.

2b1.3. What were the statistical results from validity testing? *(e.g., correlation; t-test)*

There are no statistical tests run to assess quality of the data. Non-compliance results in any one or more of the four steps listed in 2b1.2 (Standard 1.6) not followed will potentially jeopardize the accreditation status of the program granted by the Commission on Cancer (CoC). The authoritative source for comparison is the patient chart with the goal of this standard to ensure the registry abstract reflects the documented patient experience. The scope of the evaluation is 10% of the analytic caseload for each program or a maximum of 300 cases annually.

The measure reporting system reviews are highly recommended by the CoC to ensure high quality data, which directly impacts the performance rates. The Cancer Program Practice Profile Reports system performance rate for this measure is directly tied to CoC Standard 4.4, which maintains that a rate of 90% is met or exceeded, or that the program has implemented an action plan that reviews and addresses program performance below the expected Estimated Performance Rates. Failure to follow these directives results in non-compliance with Standard 4.4 which, like Standard 1.6, can potentially jeopardize the accreditation status of the program granted by the CoC.

2b1.4. What is your interpretation of the results in terms of demonstrating validity? *(i.e., what do the results mean and what are the norms for the test conducted?)*

Both the annual caseload reviews and the measure reporting system reviews are intended to ensure that reported performance rates are an accurate reflection of the care provided to patients at Commission on Cancer-accredited programs.

2b2. EXCLUSIONS ANALYSIS

NA ☒ no exclusions — skip to section [2b4](#)

Not Applicable

2b2.1. Describe the method of testing exclusions and what it tests (*describe the steps—do not just name a method; what was tested, e.g., whether exclusions affect overall performance scores; what statistical analysis was used*)

Not Applicable

2b2.2. What were the statistical results from testing exclusions? (*include overall number and percentage of individuals excluded, frequency distribution of exclusions across measured entities, and impact on performance measure scores*)

Not Applicable

2b2.3. What is your interpretation of the results in terms of demonstrating that exclusions are needed to prevent unfair distortion of performance results? (*i.e., the value outweighs the burden of increased data collection and analysis. Note: If patient preference is an exclusion, the measure must be specified so that the effect on the performance score is transparent, e.g., scores with and without exclusion*)

Not Applicable

2b3. RISK ADJUSTMENT/STRATIFICATION FOR OUTCOME OR RESOURCE USE MEASURES

If not an intermediate or health outcome, or PRO-PM, or resource use measure, skip to section [2b5](#).

2b3.1. What method of controlling for differences in case mix is used?

☒ No risk adjustment or stratification

☐ Statistical risk model with [Click here to enter number of factors](#) risk factors

☐ Stratification by [Click here to enter number of categories](#) risk categories

☐ Other, [Click here to enter description](#)

2b3.1.1 If using a statistical risk model, provide detailed risk model specifications, including the risk model method, risk factors, coefficients, equations, codes with descriptors, and definitions.

Not Applicable

2b3.2. If an outcome or resource use component measure is not risk adjusted or stratified, provide rationale and analyses to demonstrate that controlling for differences in patient characteristics (case mix) is not needed to achieve fair comparisons across measured entities.

Not Applicable

2b3.3a. Describe the conceptual/clinical and statistical methods and criteria used to select patient factors (clinical factors or social risk factors) used in the statistical risk model or for stratification by risk (e.g., potential factors identified in the literature and/or expert panel; regression analysis; statistical significance of $p < 0.10$; correlation of x or higher; patient factors should be present at the start of care) Also discuss any “ordering” of risk factor inclusion; for example, are social risk factors added after all clinical factors?

Not Applicable

2b3.3b. How was the conceptual model of how social risk impacts this outcome developed? Please check all that apply:

- ☐ Published literature
- ☐ Internal data analysis
- ☒ Other (please describe)

Not Applicable

2b3.4a. What were the statistical results of the analyses used to select risk factors?

Not Applicable

2b3.4b. Describe the analyses and interpretation resulting in the decision to select social risk factors (e.g. prevalence of the factor across measured entities, empirical association with the outcome, contribution of unique variation in the outcome, assessment of between-unit effects and within-unit effects.) Also describe the impact of adjusting for social risk (or not) on providers at high or low extremes of risk.

Not Applicable

2b3.5. Describe the method of testing/analysis used to develop and validate the adequacy of the statistical model or stratification approach (describe the steps—do not just name a method; what statistical analysis was used)

Provide the statistical results from testing the approach to controlling for differences in patient characteristics (case mix) below.

If stratified, skip to [2b3.9](#)

Not Applicable

2b3.6. Statistical Risk Model Discrimination Statistics (e.g., c-statistic, R-squared):

Not Applicable

2b3.7. Statistical Risk Model Calibration Statistics (e.g., Hosmer-Lemeshow statistic):

Not Applicable

2b3.8. Statistical Risk Model Calibration – Risk decile plots or calibration curves:

Not Applicable

2b3.9. Results of Risk Stratification Analysis:

Not Applicable

2b3.10. What is your interpretation of the results in terms of demonstrating adequacy of controlling for differences in patient characteristics (case mix)? (i.e., what do the results mean and what are the norms for

the test conducted)

Not Applicable

2b3.11. Optional Additional Testing for Risk Adjustment (*not required, but would provide additional support of adequacy of risk model, e.g., testing of risk model in another data set; sensitivity analysis for missing data; other methods that were assessed*)

Not Applicable

2b4. IDENTIFICATION OF STATISTICALLY SIGNIFICANT & MEANINGFUL DIFFERENCES IN PERFORMANCE

2b4.1. Describe the method for determining if statistically significant and clinically/practically meaningful differences in performance measure scores among the measured entities can be identified (*describe the steps—do not just name a method; what statistical analysis was used? Do not just repeat the information provided related to performance gap in 1b*)

Ninety-five percent confidence intervals were calculated at the hospital-level to determine statistical significance. Each hospital's 95% confidence interval was compared to the aggregate EPR to determine significance.

2b4.2. What were the statistical results from testing the ability to identify statistically significant and/or clinically/practically meaningful differences in performance measure scores across measured entities? (e.g., number and percentage of entities with scores that were statistically significantly different from mean or some benchmark, different from expected; how was meaningful difference defined)

The following table calculates for each set of diagnosis year(s) the aggregate measure compliance and the number of hospitals that were not statistically significant compared to the aggregate measure compliance and the hospitals that were statistically significant (both greater and less than aggregate measure compliance):

Diagnosis Year(s)	Aggregate Measure Compliance	N Hospitals Statistical Significance Compared to Aggregate Measure Compliance		
		Not Significant	Significantly Greater Than	Significantly Less Than
2014 - 2015	92.46%	860 (60.52%)	431 (30.33%)	130 (9.15%)
2014	92.89%	851 (60.79%)	470 (33.57%)	79 (5.64%)
2015	92.02%	827 (61.08%)	440 (32.50%)	87 (6.43%)

2b4.3. What is your interpretation of the results in terms of demonstrating the ability to identify statistically significant and/or clinically/practically meaningful differences in performance across measured entities? (i.e., what do the results mean in terms of statistical and meaningful differences?)

For the three cohorts of diagnosis years, more than half of the programs were not statistically significant compared to aggregate measure compliance; however for those statistically significant programs the majority were statistically greater than the aggregate measure compliance. Overall, only between 5.64% and 9.15% of programs was performing worse when compared to the aggregate.

2b5. COMPARABILITY OF PERFORMANCE SCORES WHEN MORE THAN ONE SET OF SPECIFICATIONS

If only one set of specifications, this section can be skipped.

Note: *This item is directed to measures that are risk-adjusted (with or without social risk factors) **OR** to measures with more than one set of specifications/instructions (e.g., one set of specifications for how to identify and compute the measure from medical record abstraction and a different set of specifications for claims or eMeasures). It does not apply to measures that use more than one source of data in one set of specifications/instructions (e.g., claims data to identify the denominator and medical record abstraction for the numerator). **Comparability is not required when comparing performance scores with and without social risk factors in the risk adjustment model. However, if comparability is not demonstrated for measures with more than one set of specifications/instructions, the different specifications (e.g., for medical records vs. claims) should be submitted as separate measures.***

2b5.1. Describe the method of testing conducted to compare performance scores for the same entities across the different data sources/specifications (*describe the steps—do not just name a method; what statistical analysis was used*)

Not Applicable

2b5.2. What were the statistical results from testing comparability of performance scores for the same entities when using different data sources/specifications? (*e.g., correlation, rank order*)

Not Applicable

2b5.3. What is your interpretation of the results in terms of the differences in performance measure scores for the same entities across the different data sources/specifications? (*i.e., what do the results mean and what are the norms for the test conducted*)

Not Applicable

2b6. MISSING DATA ANALYSIS AND MINIMIZING BIAS

2b6.1. Describe the method of testing conducted to identify the extent and distribution of missing data (or nonresponse) and demonstrate that performance results are not biased due to systematic missing data (or differences between responders and nonresponders) and how the specified handling of missing data minimizes bias (*describe the steps—do not just name a method; what statistical analysis was used*)

All cancer cases submitted from Commission on Cancer-accredited programs are evaluated for measure

eligibility via the Cancer Program Practice Profile Reports system and Rapid Quality Reporting System. Both systems track the completeness of staging and all data fields specifically needed to assess measure #0219 denominator including date completeness. For each hospital, cases with incomplete data were summed and reported as a proportion of all denominator-eligible and incomplete cases.

2b6.2. What is the overall frequency of missing data, the distribution of missing data across providers, and the results from testing related to missing data? (e.g., results of sensitivity analysis of the effect of various rules for missing data/nonresponse; if no empirical sensitivity analysis, identify the approaches for handling missing data that were considered and pros and cons of each)

Diagnosis Year(s)		2014 - 2015	2014	2015
Measure	Aggregate Compliance	92.46%	92.89%	92.02%
	Aggregate Denominator	121,549	60,498	61,051
	Aggregate Hospital N	1,421	1,400	1,354
Incomplete and Complete Data	Aggregate Incomplete	0.10%	0.12%	0.07%
	Aggregate Denominator	121,666	60,571	61,095
	No Incomplete Data for N Hospitals	1,374	1,381	1,323
	Incomplete Data for N Hospitals	47	19	31
	Range of Incomplete Data	0.26% - 48.00%	0.54% - 48.00%	0.61% - 13.95%

2b6.3. What is your interpretation of the results in terms of demonstrating that performance results are not biased due to systematic missing data (or differences between responders and nonresponders) and how the specified handling of missing data minimizes bias? (i.e., what do the results mean in terms of supporting the selected approach for missing data and what are the norms for the test conducted; if no empirical analysis, provide rationale for the selected approach for missing data)

For 2014-2015 data completeness varied at the hospital-level resulting in a range of 0.26% to 48.00% for the 3.31% of hospitals that had incomplete cases. At the aggregate-level, the proportion of incomplete cases was low, 0.10%, when compared to the number of measure-eligible and incomplete cases. While missing data will always bias compliance rates, we do not believe the proportion to be excessive and therefore not detrimental to the measure. Given that the Commission on Cancer mandates all cancer cases be submitted from a reporting hospital and that all submissions assessed for measure compliance, we expect and allow varying degrees of reporting incompleteness. The measure reporting systems allow hospitals to review case-level data for incomplete cases and are encouraged to make completeness updates.

3. Feasibility

Extent to which the specifications including measure logic, require data that are readily available or could be captured without undue burden and can be implemented for performance measurement.

3a. Byproduct of Care Processes

For clinical measures, the required data elements are routinely generated and used during care delivery (e.g., blood pressure, lab test, diagnosis, medication order).

3a.1. Data Elements Generated as Byproduct of Care Processes.

Abstracted from a record by someone other than person obtaining original information (e.g., chart abstraction for quality measure or registry)

If other:

3b. Electronic Sources

The required data elements are available in electronic health records or other electronic sources. If the required data are not in electronic health records or existing electronic sources, a credible, near-term path to electronic collection is specified.

3b.1. To what extent are the specified data elements available electronically in defined fields (*i.e., data elements that are needed to compute the performance measure score are in defined, computer-readable fields*)
Update this field for **maintenance of endorsement**.

Some data elements are in defined fields in electronic sources

3b.2. If ALL the data elements needed to compute the performance measure score are not from electronic sources, specify a credible, near-term path to electronic capture, OR provide a rationale for using other than electronic sources. For **maintenance of endorsement**, if this measure is not an eMeasure (eCQM), please describe any efforts to develop an eMeasure (eCQM).

The National Cancer Database (NCDB) captures colon data from 1,421 hospitals across the US with measure-eligible cases from 2014-2015. The availability and usage of electronic health records will vary by hospital. All data elements from accredited institutions are required to be submitted to the NCDB in electronic format following a nationally standardized set of data specifications from the North American Association of Cancer Registries. All accredited hospitals use data abstraction software.

3b.3. If this is an eMeasure, provide a summary of the feasibility assessment in an attached file or make available at a measure-specific URL. Please also complete and attach the NQF Feasibility Score Card.

Attachment:

3c. Data Collection Strategy

Demonstration that the data collection strategy (e.g., source, timing, frequency, sampling, patient confidentiality, costs associated with fees/licensing of proprietary measures) can be implemented (e.g., already in operational use, or testing demonstrates that it is ready to put into operational use). For eMeasures, a feasibility assessment addresses the data elements and measure logic and demonstrates the eMeasure can be implemented or feasibility concerns can be adequately addressed.

3c.1. Required for maintenance of endorsement. Describe difficulties (as a result of testing and/or operational use of the measure) regarding data collection, availability of data, missing data, timing and frequency of data collection, sampling, patient confidentiality, time and cost of data collection, other feasibility/implementation issues.

IF instrument-based, consider implications for both individuals providing data (patients, service recipients, respondents) and those whose performance is being measured.

1) The technical infrastructure to generate and report compliance with this measure has been in place since 2005 for approximately 1,500 Commission on Cancer (CoC) accredited centers performance rates for this measure. This measure is currently reported to CoC accredited programs through the National Cancer Database (NCDB) using the Cancer Program Practice Profile Report (CP3R) web-based audit and feed-back reporting tool by registrars submitting new and updated cases annually. In addition, this measure is also reported to 1,500 cancer programs participating in its “real clinical time” feedback reporting tool through its Rapid Quality Reporting System (RQRS) reported daily from registrars in regards to new and updated cases. Both of these reporting tools have been utilized in the cancer registry community and do not produce an undue burden on the data collection network. Also when questions arise about coding or the reporting systems they can consult with NCDB staff via email.

2) The data for this measure are key elements already collected in all hospital registries. This measure has been reviewed using cancer registry data. The CoC data demonstrates variation in the measure. The measure is readily implemented.

3c.2. Describe any fees, licensing, or other requirements to use any aspect of the measure as specified (e.g., value/code set, risk model, programming code, algorithm).

The Commission on Cancer charges an annual accreditation fee to each hospital and includes access to the National Cancer Database and the quality measure reporting tools for no additional charge. The accreditation fee covers the resources needed for measure development as well as the infrastructure used to report the measures.

Above the accreditation fee, hospitals must cover the cost of maintaining a registry, certified tumor registry staff, and abstraction software to submit data to the NCDB. It should be noted that there are State requirements for reporting cancer cases that would already necessitate the costs of maintaining a registry and collecting many of the same data items.

4. Usability and Use

Extent to which potential audiences (e.g., consumers, purchasers, providers, policy makers) are using or could use performance results for both accountability and performance improvement to achieve the goal of high-quality, efficient healthcare for individuals or populations.

4a. Accountability and Transparency

Performance results are used in at least one accountability application within three years after initial endorsement and are publicly reported within six years after initial endorsement (or the data on performance results are available). If not in use at the time of initial endorsement, then a credible plan for implementation within the specified timeframes is provided.

4.1. Current and Planned Use

NQF-endorsed measures are expected to be used in at least one accountability application within 3 years and publicly reported within 6 years of initial endorsement in addition to performance improvement.

Specific Plan for Use	Current Use (for current use provide URL)
	Public Reporting Pennsylvania Health Care Quality Alliance: http://www.phcqa.org/ Pennsylvania Health Care Quality Alliance: http://www.phcqa.org/ Regulatory and Accreditation Programs Commission on Cancer https://www.facs.org/quality-programs/cancer/coc/standards Commission on Cancer https://www.facs.org/quality-programs/cancer/coc/standards Quality Improvement (Internal to the specific organization) Cancer Program Practice Profile Reports https://www.facs.org/quality-programs/cancer/ncdb/qualitytools/cp3r Cancer Quality Improvement Program https://www.facs.org/quality-programs/cancer/ncdb/qualitytools/cqip Rapid Quality Reporting System https://www.facs.org/quality-programs/cancer/ncdb/qualitytools/rqrs

4a1.1 For each CURRENT use, checked above (update for maintenance of endorsement), provide:

- Name of program and sponsor
- Purpose
- Geographic area and number and percentage of accountable entities and patients included
- Level of measurement and setting

d) Public Reporting

Name: Pennsylvania Health Care Quality Alliance (PHCQA)

Purpose: PHCQA is a voluntary group of health care organizations collaboratively working together to improve the quality of health care for the people of Pennsylvania. PHCQA developed a consensus-driven, statewide approach to hospital quality measurement that is supported by quality of care data from a variety of public data sources. It is believed that by sharing aggregated quality performance data openly through public reporting on the Internet, valuable, objective health care quality information can be provided for all consumers. At the same time best practices can be identified and shared to improve the performance of all stakeholders. Commission on Cancer (CoC) accredited cancer programs in Pennsylvania may elect to voluntarily report their estimated performance rates through this program, currently 60 of 73 (82.19%) CoC Pennsylvania programs are participating.

Geographic area: Pennsylvania

Level of measurement and setting: hospital level, Pennsylvania cancer hospitals

f) Quality Improvement with Benchmarking

Name: Commission on Cancer, National Cancer Database

Purpose: The National Cancer Database (NCDB) provides a venue for accredited programs to benchmark their compliance compared to other CoC-accredited cancer programs through the use of the Cancer Program Practice Profile Reports (CP3R), the Rapid Quality Reporting System (RQRS) and the Cancer Quality Improvement Program (CQIP). CP3R, available to about 1,500 CoC-accredited cancer programs, offers local providers comparative information to assess adherence to and consideration of standard of care therapies for major cancer (see more at: <https://www.facs.org/quality-programs/cancer/ncdb/qualitytools/cp3r>). CQIP reports annual quality and outcomes data to about 1,500 cancer programs accredited by the American College of Surgeons CoC and provides the availability for programs to benchmark their performance on quality measures to other CoC-accredited programs(see more at: <https://www.facs.org/quality-programs/cancer/ncdb/qualitytools/cqip>). RQRS is a reporting and quality improvement tool which provides real clinical time assessment of hospital level adherence to National Quality Forum (NQF)-endorsed quality of cancer care measures for breast and colorectal cancers (see more at: <https://www.facs.org/quality-programs/cancer/ncdb/qualitytools/rqrs>).

Geographic area: National

Level of measurement and setting: hospital level, CoC cancer programs

g) Regulatory and Accreditation

Name: Commission on Cancer (CoC) Standards

Purpose: The CoC accredits cancer programs and in order to fulfil or maintain accreditation, programs must adhere to requirements called the CoC's Standards. Within these standards there are multiple requirements that incorporate reviewing and maintain performance rates for CoC's quality measures. For instance, Standard 5.2 requires cancer programs to participate in Rapid Quality and Reporting System (RQRS), which allows programs to review real-time clinical care and receives alerts to ensure patients' treatment are compliant with this measures. Additionally, Standards 1.2/4.3 requires each program to have a Cancer Liaison Physician (CLP) and some of the responsibility of a CLP includes reviewing CP3R, RQRS and CQIP four times a year, which includes reviewing this measure, and to discuss the findings with the cancer committee. Standard 4.4 applies to the measure with an expected performance rate of 90%.

Geographic area: National

Level of measurement and setting: hospital level, CoC cancer programs

4a1.2. If not currently publicly reported OR used in at least one other accountability application (e.g., payment program, certification, licensing) what are the reasons? (e.g., Do policies or actions of the

developer/steward or accountable entities restrict access to performance results or impede implementation?)

Not Applicable

4a1.3. If not currently publicly reported OR used in at least one other accountability application, provide a credible plan for implementation within the expected timeframes -- any accountability application within 3 years and publicly reported within 6 years of initial endorsement. (*Credible plan includes the specific program, purpose, intended audience, and timeline for implementing the measure within the specified timeframes. A plan for accountability applications addresses mechanisms for data aggregation and reporting.*)

Not Applicable

4a2.1.1. Describe how performance results, data, and assistance with interpretation have been provided to those being measured or other users during development or implementation.

How many and which types of measured entities and/or others were included? If only a sample of measured entities were included, describe the full population and how the sample was selected.

Cancer measures are developed in a multi-disciplinary setting. Clinical leadership panels work with statisticians, business analysts, and registrars to measure developers to ensure the measures are 1) clinically relevant and 2) have adequate NCDB data to support their development. Ongoing maintenance is addressed in 4a2.3. Cancer data collection through registries is uniform throughout North America. Cancer registries utilize the North American Association of Central Cancer Registries (NAACCR). NAACCR develops and promotes uniform data standards for cancer registration and certifies population-based registries among other important work to reduce the burden of cancer in North America. Data collected through the National Cancer Database (NCDB) utilizes NAACCR standard formats and editing functionality. The CoC-accredited programs file submissions are passed through an edits program to ensure the data meet acceptable quality standards. Cases with errors must be reviewed and resubmitted.

To improve capture of adjuvant therapy reported to the NCDB, the CoC-accredited programs receive individual case information regarding the quality measures supported by the CoC. This notification includes the status of the case (i.e., not eligible, concordant, non-concordant and incomplete) and any potentially missing treatment information needed for calculating the performance rates (PRs). All CoC-accredited facilities receive a report of their performance rates on this measure through the Cancer Program Practice Profile (CP3R) and an estimated performance rate on the Rapid Quality Reporting System (RQRS), a real clinical time decision support system. In 2013, the Commonwealth of Pennsylvania began reporting performance rates on this measure for 72% (52 of 72) of the CoC-accredited hospitals in Pennsylvania. That number of reporting hospitals has risen to 87.5% (63 of 72) of the Commonwealth's hospitals (7/01/2019).

4a2.1.2. Describe the process(es) involved, including when/how often results were provided, what data were provided, what educational/explanatory efforts were made, etc.

The Web-based Cancer Program Practice Profile Report (CP3R) offers local providers comparative information to assess adherence to and consideration of standard of care therapies for this measure, and provides a platform from which to promote continuous practice improvement aimed to improve quality of patient care at the local level. This tool also permits hospitals to compare their care for these patients relative to that of other providers. The aim is to empower clinicians, administrators, and other staff to work cooperatively and collaboratively to identify problems in practice and delivery and to implement best practices that will diminish disparities in care across Commission on Cancer (CoC)-accredited cancer programs. This tool is updated annually. A quality related audit is initiated for any of the accountability measures, which this measure is considered. The CoC CQIP reflects an annual snapshot of the quality measures contained in CP3R. The Rapid Quality Reporting System (RQRS) is a reporting and quality improvement tool for this measure. This tool provides real clinical time assessment of hospital-level adherence to measure and provides alerts for upcoming adjuvant therapy for patients affected by this measure. The RQRS has been available to all Commission on Cancer (CoC)-accredited cancer programs beginning September 2011. As of January 2017, RQRS participation is required for all CoC-accredited programs. RQRS is updated every 24 hours. Additionally, on the CoC's website there are explanations/user documentation for CP3R, RQRS and CQIP.

4a2.2.1. Summarize the feedback on measure performance and implementation from the measured entities and others described in 4d.1.

Describe how feedback was obtained.

Our facilities have fostered the development of the CP3R, commenting on the design of the feedback to facilitate utilization of the tools. The RQRS was developed and based on survey results from alpha and beta testers. Design issues continue to be addressed as to how best to capture forthcoming adjuvant therapy.

As this measure is distributed, if any questions about the calculation of the measure or inquiry regarding the numerator/denominator are asked, programs will submit questions through the NCDB mailbox. The User Support Specialists monitor this mailbox and answer these questions. Content related questions are sent to the Breast Site Specific Leaders (SSLs), who are renown clinical experts on breast cancer.

4a2.2.2. Summarize the feedback obtained from those being measured.

The CP3R/CQIP: Our registrars and physicians review the measures through phone calls and e-mails. Our surveyors inform the CoC of potential problems that the measure may encounter. As issues are identified, slight modifications will be made; e.g., excluding patients on related clinical trials. The same feedback may be obtained from CQIP, an annual snapshot of the CP3R measures.

The RQRS: The responses have been positive. For example, a hospital administrator has stated that he had better physician recruiting with the implementation of this clinical data support system that alerts providers of adjuvant therapy for their patients. Further, an often heard comment is that RQRS has “prevented patients from slipping through the cracks” as the first course of treatment can last a year.

4a2.2.3. Summarize the feedback obtained from other users

The Pennsylvania Health Care Alliance (PHCQA) approached the CoC to support voluntary hospital reporting of clinical measures on their website (<http://www.phcqa.org/>) and has of to date yielded positive feedback in that the relationship still exists. The CoC provides the means for data collection through the annual call for data. Calculations are made and sent to the hospitals, who have stated that they wish to participate in this voluntary reporting of their performance on the measure. Upon agreement by these hospitals, the NCDB sends the Performance Rates to the PHCA for posting on the website. In 2013, the Commonwealth of Pennsylvania began reporting performance rates on this measure for 72% (52 of 72) of the CoC-accredited hospitals in Pennsylvania. That number of reporting hospitals has risen to 87.5% (63 of 72) of the Commonwealth’s hospitals (7/01/2019).

4a2.3. Describe how the feedback described in 4a2.2.1 has been considered when developing or revising the measure specifications or implementation, including whether the measure was modified and why or why not.

Site-specific leaders, who are expert clinicians in the care of breast cancer patients, are notified of any potential issues that have been identified in the calculation of this measure. They review the measure for current practice and potential impact of any clinical trials that may impact the measure. Identified issues are communicated to the CoC and changes, if needed, are incorporated into the measure logic. The CoC-accredited hospitals are notified if changes are made and why.

Improvement

Progress toward achieving the goal of high-quality, efficient healthcare for individuals or populations is demonstrated. If not in use for performance improvement at the time of initial endorsement, then a credible rationale describes how the performance results could be used to further the goal of high-quality, efficient healthcare for individuals or populations.

4b1. Refer to data provided in 1b but do not repeat here. Discuss any progress on improvement (trends in performance results, number and percentage of people receiving high-quality healthcare; Geographic area and number and percentage of accountable entities and patients included.)

If no improvement was demonstrated, what are the reasons? If not in use for performance improvement at the time of initial endorsement, provide a credible rationale that describes how the performance results could be used to further the goal of high-quality, efficient healthcare for individuals or populations.

Between 2008 and 2015, aggregate compliance with the breast radiation measure increased from 88.8% to 92.0%. Within race and ethnicity, compliance rates for black (84.3% to 89.1%) and Hispanic (80.2% to 87.6%) patients have improved. For the uninsured/Medicaid patient cohort, the compliance rates moved upward from 82.4% (2008) to 87.2% (2015). By Census region, the Northeast with the lowest aggregate compliance rate improved from 87.2% (2008) to 92.8% (2015).

4b2. Unintended Consequences

The benefits of the performance measure in facilitating progress toward achieving high-quality, efficient healthcare for individuals or populations outweigh evidence of unintended negative consequences to individuals or populations (if such evidence exists).

4b2.1. Please explain any unexpected findings (positive or negative) during implementation of this measure including unintended impacts on patients.

This measure, as specified, is susceptible to under-reporting of the adjuvant RT component appearing in the measure numerator. Due to referral of services, access to patient clinical follow-up with radiation oncology may initially be limited or unavailable. However, CoC accredited programs have demonstrated through retrospective case and chart reviews that significant additional and accurate information regarding treatment provided to patients can be ascertained, resulting in higher and clinically more accurate reflections of the care provided or coordinated through their centers. Additionally, the CoC Standards require direct review and oversight of this measure compliance be monitored by an attending physician (Cancer Liaison Physician, CLP) on staff at the center on a quarterly basis.

4b2.2. Please explain any unexpected benefits from implementation of this measure.

A benefit of implementing this measure in the prospective RQRS reporting environment is that hospitals are sent alerts on anticipated treatment for new diagnoses as they are abstracted, ensuring timeliness of delivery of care. Beginning in January of 2017, participation in RQRS became a requirement to remain accredited by the CoC.

5. Comparison to Related or Competing Measures

If a measure meets the above criteria and there are endorsed or new related measures (either the same measure focus or the same target population) or competing measures (both the same measure focus and the same target population), the measures are compared to address harmonization and/or selection of the best measure.

5. Relation to Other NQF-endorsed Measures

Are there related measures (conceptually, either same measure focus or target population) or competing measures (conceptually both the same measure focus and same target population)? If yes, list the NQF # and title of all related and/or competing measures.

No

5.1a. List of related or competing measures (selected from NQF-endorsed measures)

5.1b. If related or competing measures are not NQF endorsed please indicate measure title and steward.

5a. Harmonization of Related Measures

The measure specifications are harmonized with related measures;

OR

The differences in specifications are justified

5a.1. If this measure conceptually addresses EITHER the same measure focus OR the same target population as NQF-endorsed measure(s):

Are the measure specifications harmonized to the extent possible?

5a.2. If the measure specifications are not completely harmonized, identify the differences, rationale, and impact on interpretability and data collection burden.

Not Applicable

5b. Competing Measures

The measure is superior to competing measures (e.g., is a more valid or efficient way to measure);

OR

Multiple measures are justified.

5b.1. If this measure conceptually addresses both the same measure focus and the same target population as NQF-endorsed measure(s):

Describe why this measure is superior to competing measures (e.g., a more valid or efficient way to measure quality); OR provide a rationale for the additive value of endorsing an additional measure. (Provide analyses when possible.)

Not Applicable

Appendix

A.1 Supplemental materials may be provided in an appendix. All supplemental materials (such as data collection instrument or methodology reports) should be organized in one file with a table of contents or bookmarks. If material pertains to a specific submission form number, that should be indicated. Requested information should be provided in the submission form and required attachments. There is no guarantee that supplemental materials will be reviewed.

No appendix **Attachment:**

Contact Information

Co.1 Measure Steward (Intellectual Property Owner): Commission on Cancer, American College of Surgeons

Co.2 Point of Contact: Bryan, Palis, bpalis@facs.org, 312-202-5436-

Co.3 Measure Developer if different from Measure Steward: Commission on Cancer, American College of Surgeons

Co.4 Point of Contact: Bryan, Palis, bpalis@facs.org, 302-202-5436-

Additional Information

Ad.1 Workgroup/Expert Panel involved in measure development

Provide a list of sponsoring organizations and workgroup/panel members' names and organizations. Describe the members' role in measure development.

Original Developers: Christopher Pezzi, MD, FACS (Abington Memorial Hospital, Abington PA); Lawrence Shulman, MD (Dana Farber Cancer Institute, Boston MA); Stephen Edge, MD, FACS (Roswell Park Cancer Institute, Buffalo NY); David Winchester, MD, FACS (Northshore University Health System, Evanston IL); Diana Dickson-Witmer, MD, FACS (Christiana Health Care System, Wilmington DE); Kelly Hunt, MD, FACS (MD Anderson Cancer Center, Houston TX); Marilyn Leitch, MD, FACS (University of Texas – Southwestern, Dallas TX); Katherine Virgo, PhD (American Cancer Society)

The current Measure workgroup includes:

Charles Cheng MD, FACS (Fox Valley Surgical Associates, Appleton, WI), Daniel McKellar, MD, FACS (Wayne Healthcare, Greenville, OH), David Jason Bentrem, MD (Northwestern Memorial Hospital, Chicago, IL), Karl Bilimoria, MD, FACS (Northwestern Univ/Feinberg Sch of Med, Chicago, IL), Lawrence Shulman MD (University of Pennsylvania, Philadelphia, PA), Matthew A Facktor, MD FACS (Geisinger Medical Center, Danville, PA), Ted James (University of Vermont, Burlington, VT)

This panel meets at least once annually to review quality measures currently supported and implemented by the ACoS Commission on Cancer and to investigate and consider/review development of possible new measures.

Measure Developer/Steward Updates and Ongoing Maintenance

Ad.2 Year the measure was first released: 2007

Ad.3 Month and Year of most recent revision: 01, 2019

Ad.4 What is your frequency for review/update of this measure? Annual

Ad.5 When is the next scheduled review/update for this measure? 01, 2020
