RE: GI/GU Endorsement Maintenance Pilot Project: Stage two checklist
DA: September 28, 2012

GI/GU Endorsement Maintenance Pilot Project, 2012

Thank you for your participation and concept submission to the GI/GU Endorsement Maintenance Pilot Project. Please carefully review the instructions below for next steps.

Preparation for submission of recommended concepts to stage two

1. Keep in mind, while the measure submission forms for recommended concepts opens in early November, approval of concepts is finalized with Board of Directors approval on November 30.
2. Review all requirements for measure submission and criteria to be suitable for endorsement:
 - Consider and address harmonization issues for related concepts
 - #0399 - Hepatitis C: Hepatitis A Vaccination (Paired With #0400), AMA-PCPI
 - Ensure that evidence remains current and consistent with concept
 - Check if there have been any major changes in the evidence base supporting the approved concept. If yes, provide the citation and copy of the study or article and discuss the impact on the measure concept.
 - If there are any changes in the concept from that which was approved, identify those changes and discuss the relevance of the evidence to the approved concept and the updated concept.
 - Ensure that testing requirements have been satisfied
 - Testing requirements are available in the [Measure Testing Task Force report](#)
3. Review the Developer Guidebook for additional resources and information for preparing your stage two measure submission. The updated guidebook will be available once stage two submission forms are opened and will also be distributed by NQF Technical Assistance Staff.

4. **Notify NQF project staff by October 25, 2012** if you plan to submit full specifications and testing for approved concepts by the December 19, 2012 stage two measure submission deadline.
5. You will be required to submit at least one of your fully specified and tested measures on or prior to the **technical assistance deadline on December 3, 2012**, for a technical review for completeness and responsiveness by the NQF staff.
6. Measure submissions must be complete and responsive to ALL questions in order to be advanced to the Steering Committee for consideration and evaluation.

Concept(s) Recommended for Approval: ActiveHealth

Provide a response for EACH Committee recommendation describing your rationale for implementing (or not) the recommendation and any additional considerations.

Upload this document to your online measure submission form for review by the Committee in stage two.

0622 GERD - Upper Gastrointestinal Study in Adults with Alarm Symptoms	
Committee Recommendations to Developer	Developer Response
This measure should include chronic GERD patients.	The denominator is defined for chronic GERD patients.
The exclusion should be clarified as previous malignancy.	The exclusion has been clarified as metastatic malignancy.
Barrett's esophagus should be included.	Barrett's esophagus has been removed from the denominator exclusions and those patients with Barrett's will be included if they meet the remaining denominator criteria.
The measure should be expanded to include patients under 18 as well; pediatric populations should be included as the same evidence applies.	The age band has been lifted to allow for patients of all ages.
Additional evidence should be provided for evidence criterion.	Completed. Please see evidence submission form in section 1c.28.
Additional information on performance gap is needed.	Please see section 3b.1
Define/specify the testing/procedures for the numerator more clearly.	Please see the Measure Testing Submission Form attachment

0622 GERD - Upper Gastrointestinal Study in Adults with Alarm Symptoms	
Consider also specifying the numerator in a patient population that would be more broadly impactful (e.g., ie. obese and/or male patients)	<p>We have modified the measure so that it now has 2 separate numerators: one for the general population, and one for those patients at high risk. However, we have not tested this new algorithm because we strongly feel that separating the numerators in such a manner will lead to erroneous reporting. We strongly recommend separating these high risk individuals into another DENOMINATOR and reporting the 2 rates of compliance separately. We await feedback from the NQF on this suggestion. Addendum</p> <p>1/11/2012: After discussing with the NQF, we have separated the denominator in to an overall general population and a high risk population. Due to the lag and timing of the NQF's decision, testing this measure with the NEW denominator is currently under way. The testing results currently in the submission form reflect the original measure denominator.</p>

Measure Submission and Evaluation Worksheet 6.0

This form contains the information submitted by measure developers/stewards, organized according to NQF's measure evaluation criteria and process. The evaluation criteria, evaluation guidance documents, and a blank online submission form are available on the [submitting standards web page](#).

NQF #: 0622 NQF Project: GI and GU Project	
(for Endorsement Maintenance Review) Original Endorsement Date: Most Recent Endorsement Date: Evaluation Form Created: March 22, 2013	
BRIEF MEASURE INFORMATION	
De.1 Measure Title: GERD - Upper Gastrointestinal Study in Patients with Alarm Symptoms	
Co.1.1 Measure Steward: ActiveHealth Management	
De.2 Brief Description of Measure: The percentage of patients with in the overall and high risk population with gastroesophageal reflux disease (GERD) with alarm symptoms who have had an upper gastrointestinal study. (2 separate Denominators)	
2a1.1 Numerator Statement: Patients who have had at least 1 esophageal procedure, upper GI study (Upper GI radiologic exam with high density barium, with or without delayed films, esophageal or gastric motility study, gastric emptying study,gastric analysis test, upper GI endoscopy, or upper GI series), or gastrectomy or evidence of at least 1 gastric or esophageal cancer diagnosis in the past 12 months. *Note-cancer diagnosis implies diagnostic testing was done, and therefore completes numerator	
2a1.4 Denominator Statement: Denominator 1:Patients with a diagnosis of chronic GERD with alarm symptoms (e.g., dysphagia, iron deficiency anemia, weight loss)in the past 12 months. Denominator 2:High risk patients (i.e., obese, male, or age > 50) with a diagnosis of GERD with alarm symptoms (i.e., dysphagia or weight loss) in the past 12 months	
2a1.8 Denominator Exclusions: Specific Exclusions: 1. Patients with esophageal varices. 2. Patients with gastric restrictive procedures. 3. Patients with weight loss surgery. 4. 1. Patients with a metastatic malignancy, General exclusions: 1. Evidence of metastatic disease or active treatment of malignancy (chemotherapy or radiation therapy) in the last 6 months 2. Patients who have been in a skilled nursing facility in the last 3 months 3. Patients who are terminally ill or in Hospice	
1.1 Measure Type: Process 2a1. 25-26 Data Source: Other, We allow data from several different sources including claims, health information exchanges, provider and patient surveys, our patient health portal, and through feedback given to our nurses via telephonic engagement. All data is processed through ActiveHealth Management's clinical rule engine, CareEngine. Electronic clinical data source for pharmacy, lab, and EHR data is ActiveCareTeam (clinical workflow tool and dashboard) and MyActiveHealth (PHR). Healthcare provider surveys and patient surveys are included as a part of our clinical alerts (aka Care Considerations) feedback section. Patient self-reported data is included as a part of our patient portal (My ActiveHealth) and our disease management program (Active DM). The individual sources for this measure are not tested separately. We ingest and store all data in a centralized warehouse from multiple sources. All data sources are tested simultaneously.	

See Guidance for Definitions of Rating Scale: H=High; M=Moderate; L=Low; I=Insufficient; NA=Not Applicable

2a1.33 Level of Analysis: Population : National

1.2-1.4 Is this measure paired with another measure? No

De.3 If included in a composite, please identify the composite measure (*title and NQF number if endorsed*): N/A

1. IMPACT, OPPORTUNITY, EVIDENCE - IMPORTANCE TO MEASURE AND REPORT

Importance to Measure and Report is a threshold criterion that must be met in order to recommend a measure for endorsement. All three subcriteria must be met to pass this criterion. See [guidance on evidence](#).

Measures must be judged to be important to measure and report in order to be evaluated against the remaining criteria.
(evaluation criteria)

1a. High Impact: H M L I

(The measure directly addresses a specific national health goal/priority identified by DHHS or NPP, or some other high impact aspect of healthcare.)

De.4 Subject/Topic Areas (Check all the areas that apply): Gastrointestinal (GI) : Gastro-Esophageal Reflux Disease (GERD)/Peptic Ulcer, Gastrointestinal (GI)

De.5 Cross Cutting Areas (Check all the areas that apply):

1a.1 Demonstrated High Impact Aspect of Healthcare:

Affects large numbers; High resource use; Patient/societal consequences of poor quality

1a.2 If "Other," please describe: N/A

1a.3 Summary of Evidence of High Impact (Provide epidemiologic or resource use data):

Gastroesophageal reflux disease (GERD) is a condition when stomach contents are refluxed into the esophagus and result in troublesome symptoms (e.g., heartburn or acid regurgitation) or complications (e.g., esophagitis, stricture). GERD is a common disorder of the upper gastrointestinal tract and has an incidence of 10-38% in the western adult population. In 2004, 27 percent of elderly Medicare patients used GERD medications, spending a total of \$5.6 billion [1].

Hospitalizations for esophageal disorders increased from 516,895 to 646,785 from 1998 to 2005. Alarming symptoms have been considered a marker suggesting complications of GERD or malignancy [4,5]. In 2005, 9.1 percent of hospitalizations with a primary GERD diagnosis had alarm symptoms, which are serious enough to warrant further exploration for esophageal disorders. In the same year, 4.2 percent of hospitalizations with a GERD diagnosis had an esophageal disorder. From 1998 to 2005, dysphagia, esophageal adenocarcinoma, and esophagitis were the fastest growing esophageal disorders with a GERD diagnosis, increasing by 264 percent, 195 percent, and 94 percent, respectively. The number of primary GERD hospitalizations with alarm symptoms increased by 39 percent since 1998 [1]. In a 2002 questionnaire study, the odds ratio of patients with dyspepsia and alarm symptoms for both gastrointestinal cancer and mortality over a 3-year period were significantly raised [6]. With the increase in incidence of esophageal adenocarcinoma and esophagitis, along with some evidence suggesting delays in cancer diagnosis due to failure to investigate patients with alarm features [7,8], the need for endoscopic evaluation upon such alarm symptoms in patients with GERD becomes more vital.

1b. Opportunity for Improvement: H M L I

(*There is a demonstrated performance gap - variability or overall less than optimal performance*)

1b.1 Briefly explain the benefits (improvements in quality) envisioned by use of this measure:

This measure is aimed at optimizing the care and identifying complications of GERD in the presence of alarm symptoms. The principal reason to evaluate via endoscopy in patients with GERD and alarm symptoms is to detect structural abnormalities that may need additional diagnostic evaluation, evaluate the success of medical therapy, and for potential biopsy opportunities as part of a diagnostic differential for such symptomatology. This measure was developed with the goal to help reduce the progression of complicated esophageal diseases and investigate patients with a higher-risk of upper gastrointestinal malignancy.

1b.2 Summary of Data Demonstrating Performance Gap (*Variation or overall less than optimal performance across providers*):

[For Maintenance – Descriptive statistics for performance results for this measure - distribution of scores for measured entities by quartile/decile, mean, median, SD, min, max, etc.]

There are currently no large population studies summarizing the performance gap of upper endoscopy on GERD patients with alarm symptoms (i.e., either dysphagia or unintentional weight loss). From a test of this measure done on a sample population of 2.46 million, we found 392 patients with GERD AND either dysphagia or unintentional weight loss. Of these patients, 260 had an upper endoscopy performed during the measurement year. This translates to a performance gap of 33.7% [1].

1b.3 Citations for Data on Performance Gap: [For Maintenance – Description of the data or sample for measure results reported in 1b.2 including number of measured entities; number of patients; dates of data; if a sample, characteristics of the entities included]

2.46 million lives were included in the sample population, representing a cross-sectional nationwide sample from our client population, 49% male, 51% female, with an average age of 37 years. Test was performed in 2012. 392 patients had both GERD and at least one alarm symptom. 260 of these patients had an Upper GI study done.

1. ActiveHealth Management, Inc., testing done from June 3rd, 2009 to June 3rd, 2010, includes both commercial and Medicare population.

1b.4 Summary of Data on Disparities by Population Group (*for example by race/ethnicity, gender, age, insurance status, socioeconomic status, and/or disability, etc. If you do not have data on your specific measure, perform a literature search/review and report data for the measure or similar appropriate concept.):* [For Maintenance –Descriptive statistics for performance results for this measure by population group]

Most large population studies are done in Asian countries due to the higher rate of upper gastrointestinal malignancy; however there is insufficient data demonstrating the disparities between different population groups within the United States.

1b.5 Citations for Data on Disparities Cited in 1b.4: [For Maintenance – Description of the data or sample for measure results reported in 1b.4 including number of measured entities; number of patients; dates of data; if a sample, characteristics of the entities included]

No citations.

1c. Evidence (*Measure focus is a health outcome OR meets the criteria for quantity, quality, consistency of the body of evidence.*) Is the measure focus a health outcome? Yes No If not a health outcome, rate the body of evidence.

Quantity: H M L I Quality: H M L I Consistency: H M L I

Quantity	Quality	Consistency	Does the measure pass subcriterion1c?
M-H	M-H	M-H	Yes <input type="checkbox"/>

L	M-H	M	Yes <input type="checkbox"/> IF additional research unlikely to change conclusion that benefits to patients outweigh harms: otherwise No <input type="checkbox"/>		
M-H	L	M-H	Yes <input type="checkbox"/> IF potential benefits to patients clearly outweigh potential harms: otherwise No <input type="checkbox"/>		
L-M-H	L-M-H	L	No <input type="checkbox"/>		
Health outcome – rationale supports relationship to at least one healthcare structure, process, intervention, or service			Does the measure pass subcriterion 1c? Yes <input type="checkbox"/> IF rationale supports relationship		
SEE ATTACHED EVIDENCE SUBMISSION FORM					
<p>Was the threshold criterion, <i>Importance to Measure and Report</i>, met? <i>(1a & 1b must be rated moderate or high and 1c yes)</i> Yes <input type="checkbox"/> No <input type="checkbox"/></p> <p>Provide rationale based on specific subcriteria:</p>					
<p>For a new measure if the Committee votes NO, then STOP.</p> <p>For a measure undergoing endorsement maintenance, if the Committee votes NO because of 1b. (no opportunity for improvement), it may be considered for continued endorsement and all criteria need to be evaluated.</p>					

2. RELIABILITY & VALIDITY - SCIENTIFIC ACCEPTABILITY OF MEASURE PROPERTIES

Extent to which the measure, as specified, produces consistent (reliable) and credible (valid) results about the quality of care when implemented. (evaluation criteria)

Measure testing must demonstrate adequate reliability and validity in order to be recommended for endorsement. Testing may be conducted for data elements and/or the computed measure score. Testing information and results should be entered in the appropriate field. Supplemental materials may be referenced or attached in item 2.1. See [guidance on measure testing](#).

S.1 Measure Web Page (*In the future, NQF will require measure stewards to provide a URL link to a web page where current detailed specifications can be obtained*). Do you have a web page where current detailed specifications for this measure can be obtained?

www.activehealth.com

2a1.1 Numerator Statement (*Brief, narrative description of the measure focus or what is being measured about the target population, e.g., cases from the target population with the target process, condition, event, or outcome*):

Patients who have had at least 1 esophageal procedure, upper GI study (Upper GI radiologic exam with high density barium, with or without delayed films, esophageal or gastric motility study, gastric emptying study,gastric analysis test, upper GI endoscopy, or upper GI series), or gastrectomy or evidence of at least 1 gastric or esophageal cancer diagnosis in the past 12 months. *Note-cancer diagnosis implies diagnostic testing was done, and therefore completes numerator

2a1.3 Numerator Details (*All information required to identify and calculate the cases from the target population with the target process, condition, event, or outcome such as definitions, codes with descriptors, and/or specific data collection items/responses*):

Numerator: [for both the General Population and the High Risk]

One of the following:

1. Presence of at least 1 ESOPHAGEAL PROCEDURES procedure from claims or HIE in the past 12 months
2. Presence of at least 1 UPPER GI STUDY procedure from claims or HIE in the past 12 months
3. Presence of at least 1 GASTRECTOMY procedure from claims or HIE in the past 12 months
4. Presence of at least 1 CANCER GASTRIC diagnosis from claims or HIE in the past 12 months
5. Presence of at least 1 CANCER ESOPHAGEAL diagnosis from claims or HIE in the past 12 months
6. Presence of patient data via online PHR or telephonic nurse assessment confirming at least 1 PDD- EGD IN PAST 12 MTHS (OR UPPER GI STUDY) result in the past 12 months

(NOTE: Words written in capital letters are element names. Please refer to the code set for description.)

2a1.4 Denominator Statement (*Brief, narrative description of the target population being measured*):

Denominator 1:Patients with a diagnosis of chronic GERD with alarm symptoms (e.g., dysphagia, iron deficiency anemia, weight

loss)in the past 12 months.

Denominator 2:High risk patients (i.e., obese, male, or age > 50) with a diagnosis of GERD with alarm symptoms (i.e., dysphagia or weight loss) in the past 12 months

2a1.5 Target Population Category (Check all the populations for which the measure is specified and tested if any):

Senior Care

2a1.7 Denominator Details (All information required to identify and calculate the target population/denominator such as definitions, codes with descriptors, and/or specific data collection items/responses):

DENOMINATOR –1- General population

All of the following:

1. One of the following:
 - a. Presence of at least 2 GERD INCLUDING BARRETT'S diagnosis from claims in the past 12 months
 - b. Presence of at least 1 GERD INCLUDINGBARRETT'S diagnosis from HIE in the past 12 months
 - c. Presence of patient data via online PHR or telephonic nurse assessment confirming at least 1 PDD- GERD in the past 12 months
2. One of the following:
 - a. Presence of at least 2 WEIGHT LOSS diagnosis from claims or 1 WEIGHT LOSS diagnosis from HIE in the past 12 months
 - b. Presence of at least 2 DYSPHAGIA diagnosis from claims or HIE in the past 12 months
 - i. EXCLUSION: if the following is correct:Presence of at least 2 DYSPHAGIA - MISC. CAUSES diagnosis from claims or 1 DYSPHAGIA - MISC. CAUSES diagnosis from HIE in the past 12 months
 - c. Presence of patient data via online PHR or telephonic nurse assessment confirming at least 1 PDD- GERD WARNING SYMPTOMS result in the past 12 months
3. One of the following:
 - a. Presence of at least 1 fill PUD/GERD DRUGS for 60 day total supply from claims in the past 12 months
 - b. Presence of at least 1 fill PUD/GERD DRUGS drug from HIE in the past 12 months
 - c. Presence of patient data via online PHR or telephonic nurse assessment confirming at least 1 fill PUD/GERD DRUGS drug in the past 12 months

DENOMINATOR – 2 - High Risk Patients with Alarm Symptoms

All of the following:

1. One of the following:
 - a. Presence of at least two OBESITY diagnosis from claims in the past 12 months
 - b. Presence of at least one OBESITY diagnosis from HIE in the past 12 months
 - c. Presence of at least one disability claim for OBESITY filed in the past 12 months
 - d. Presence of patient data via online PHR or telephonic nurse assessment confirming at least 1 PDD- OBESITY result in the past 12 months
 - e. Patient is male
 - f. Patient is over 50 years of age
 - g. Presence of at least 1 MU BMI LOINC code for a BMI \geq 30 result from claims or HIE in the past 12 months
 - h. Presence of patient data via online PHR or telephonic nurse assessment confirming PDD- BMI for most recent BMI \geq 30 result in the past 12 months
 - i. Presence of at least 1 BMI \geq 30 diagnosis from claims or HIE in the past 12 months
2. One of the following:
 - a. Presence of at least 2 GERD INCLUDING BARRETT'S diagnosis from claims in the past 12 months
 - b. Presence of at least 1 GERD INCLUDING BARRETT'S diagnosis from HIE in the past 12 months
 - c. Presence of patient data via online PHR or telephonic nurse assessment confirming a diagnosis of GERD in the past 12 months
3. One of the following:
 - a. Presence of at least 2 WEIGHT LOSS diagnosis from claims or 1 WEIGHT LOSS diagnosis from HIE in the past 12 months
 - b. Presence of at least 2 DYSPHAGIA diagnosis from claims or HIE in the past 12 months

- i. EXCLUSION: if the following is correct: Presence of at least 2 DYSPHAGIA - MISC. CAUSES diagnosis from claims or or 1 DYSPHAGIA - MISC. CAUSES diagnosis from HIE in the past 12 months
- c. Presence of patient data via online PHR or telephonic nurse assessment confirming at least 1 PDD- GERD WARNING SYMPTOMS result in the past 12 months
- 4. One of the following:
 - a. Presence of at least 1 fill PUD/GERD DRUGS for 60 day total supply from claims in the past 12 months
 - b. Presence of at least 1 fill PUD/GERD DRUGS from HIE in the past 12 months
 - c. Presence of patient data via online PHR or telephonic nurse assessment confirming 1 fill of PUD/GERD DRUGS in the past 12 months

(NOTE: Words written in capital letters are element names. Please refer to the code set for description.)

2a1.8 Denominator Exclusions (*Brief narrative description of exclusions from the target population*):

Specific Exclusions:

- 1. Patients with esophageal varices.
- 2. Patients with gastric restrictive procedures.
- 3. Patients with weight loss surgery.
- 4. 1. Patients with a metastatic malignancy,

General exclusions:

- 1. Evidence of metastatic disease or active treatment of malignancy (chemotherapy or radiation therapy) in the last 6 months
- 2. Patients who have been in a skilled nursing facility in the last 3 months
- 3. Patients who are terminally ill or in Hospice

2a1.9 Denominator Exclusion Details (*All information required to identify and calculate exclusions from the denominator such as definitions, codes with descriptors, and/or specific data collection items/responses*):

SPECIFIC DENOMINATOR EXCLUSIONS:

One of the following:

- 1. Presence of at least 1 ESOPHAGEAL VARICES diagnosis from claims or HIE in the past 12 months
- 2. Presence of at least 1 GASTRIC RESTRICTIVE PROCEDURE procedure from claims or HIE anytime in the past
- 3. Presence of at least 1 WEIGHT LOSS SURGERY (ICD9) diagnosis from claims or HIE anytime in the past
- 4. Presence of at least 1 METASTATIC MALIGNANCY(INCL CHEMO/RADIATION) diagnosis from claims or HIE in the past 12 months
- 5. Presence of patient data via online PHR or telephonic nurse assessment confirming at least 1 PDD- GASTRIC BYPASS SURGERY result in the past 12 months

(NOTE: Words written in capital letters are element names. Please refer to the code set for description.)

2a1.10 Stratification Details/Variables (*All information required to stratify the measure results including the stratification variables, codes with descriptors, definitions, and/or specific data collection items/responses*):

This measure is not stratified.

2a1.11 Risk Adjustment Type (*Select type. Provide specifications for risk stratification in 2a1.10 and for statistical model in 2a1.13*): No risk adjustment or risk stratification 2a1.12 If "Other," please describe: N/A

2a1.13 Statistical Risk Model and Variables (*Name the statistical method - e.g., logistic regression and list all the risk factor variables. Note - risk model development should be addressed in 2b4*):

N/A

2a1.14-16 Detailed Risk Model Available at Web page URL (or attachment). Include coefficients, equations, codes with descriptors, definitions, and/or specific data collection items/responses. Attach documents only if they are not available on a webpage and keep attached file to 5 MB or less. NQF strongly prefers you make documents available at a Web page URL. Please supply login/password if needed:

2a1.17-18. Type of Score:

Rate/proportion

If other: N/A

2a1.19 Interpretation of Score (*Classifies interpretation of score according to whether better quality is associated with a higher score, a lower score, a score falling within a defined interval, or a passing score*):

better quality = higher score

2a1.20 Calculation Algorithm/Measure Logic (*Describe the calculation of the measure score as an ordered sequence of steps including identifying the target population; exclusions; cases meeting the target process, condition, event, or outcome; aggregating data; risk adjustment; etc.*):

- 1.) Identify those patients who meet denominator criteria, e.g. have a diagnosis of chronic GERD AND who have evidence of a fill for PUD/GERD medication(s)AND who have evidence of warning signs, in the stated timeframe
- 2.) Subtract those patients who meet exclusionary criteria, e.g. have other of GERD alarm-like symptoms
- 3.) Identify those patients who meet the numerator criteria, e.g. who have evidence of an esophageal procedure, specified GI study, gastrectomy, or gastric or esophageal cancer in the specified timeframe.
- 4.) Divide the numerator by the denominator (minus the exclusions) and multiply by 100 to calculate measure score (percentage):
Measure Score = [Numerator/(Denominator-Exclusions)] X 100

2a1.21-23 Calculation Algorithm/Measure Logic Diagram URL or attachment:

Included in attached appendix

2a1.24 Sampling (Survey) Methodology. If measure is based on a sample (or survey), provide instructions for obtaining the sample, conducting the survey and guidance on minimum sample size (response rate):

This measure is not based on a survey.

2a1.25 Data Source (*Check all the sources for which the measure is specified and tested*). If other, please describe:

Other

2a1.26 Data Source/Data Collection Instrument (*Identify the specific data source/data collection instrument, e.g. name of database, clinical registry, collection instrument, etc.*):

N/A

2a1.27-29 Data Source/data Collection Instrument Reference Web Page URL or Attachment:

We allow data from several different sources including claims, health information exchanges, provider and patient surveys, our patient health portal, and through feedback given to our nurses via telephonic engagement. All data is processed through ActiveHealth Management's clinical rule engine, CareEngine. Electronic clinical data source for pharmacy, lab, and EHR data is ActiveCareTeam (clinical workflow tool and dashboard) and MyActiveHealth (PHR). Healthcare provider surveys and patient surveys are included as a part of our clinical alerts (aka Care Considerations) feedback section. Patient self-reported data is included as a part of our patient portal (My ActiveHealth) and our disease management program (Active DM).

The individual sources for this measure are not tested separately. We ingest and store all data in a centralized warehouse from multiple sources. All data sources are tested simultaneously. Available at measure-specific web page URL identified in S.1

2a1.30-32 Data Dictionary/Code Table Web Page URL or Attachment:

Available in attached Excel or csv file

NQF_622_-_CODE_SET_Revised_1.8.13.xlsx

2a1.33 Level of Analysis (*Check the levels of analysis for which the measure is specified and tested*):

Population : National

2a1.34-35 Care Setting (*Check all the settings for which the measure is specified and tested*):

Other

If other: We do not differentiate between practice settings when testing the measures. All data is used agnostic of practice set

2a. RELIABILITY. Precise Specifications and Reliability Testing: H M L I2b. VALIDITY. Validity, Testing, including all Threats to Validity: H M L I2c. Disparities in Care: H M L I NA (*If applicable, the measure specifications allow identification of disparities.*)

SEE ATTACHED MEASURE TESTING FORM

Steering Committee: Overall, was the criterion, *Scientific Acceptability of Measure Properties*, met?(Reliability and Validity must be rated moderate or high) Yes No

Provide rationale based on specific subcriteria:

If the Committee votes No, STOP

3. USABILITY

Extent to which potential audiences (e.g., consumers, purchasers, providers, policymakers) are using or could use performance results for both accountability and performance improvement to achieve the goal of high-quality, efficient healthcare for individuals or populations. (evaluation criteria)

3.1 Current and Planned Use (*NQF-endorsed measures are expected to be used in at least one accountability application within 3 years and publicly reported within 6 years of initial endorsement in addition to performance improvement.*):

Current and Planned Use (check all the current and planned uses; for any current uses that are checked, provide a URL for the specific program)

Planned	Current	For current use, Provide URL
Public Reporting; Quality Improvement (Internal to the specific organization)		

3a. Accountability and Transparency: H M L I

(Performance results are used in at least one accountability application within three years after initial endorsement and are publicly reported within six years after initial endorsement (or the data on performance results are available). If not in use at the time of initial endorsement, then a credible plan for implementation within the specified timeframes is provided.)

3a.1. For each CURRENT use, checked above, provide:

- Name of program and sponsor
- Purpose
- Geographic area and number and percentage of accountable entities and patients included

N/A

3a.2. If not currently publicly reported OR used in at least one other accountability application (e.g., payment program, certification, licensing) what are the reasons? (e.g., Do policies or actions of the developer/steward or accountable entities restrict access to performance results or block implementation?)

The ActiveHealth website has recently undergone a renovation to enhance its appearance and user experience. Our measures are an integral part of the ActiveHealth website and have undergone renovation as well. We have recently launched several of our measures on the quality measures web page and anticipate more robust reporting and other capabilities to be developed over the course of the next one to two years, as we fine tune our recent changes. While the measure specifications will be publicly available,

See Guidance for Definitions of Rating Scale: H=High; M=Moderate; L=Low; I=Insufficient; NA=Not Applicable

the performance results of individuals or organizations will not be reported due to proprietary reasons.

3a.3 If not currently publicly reported OR used in at least one accountability application, provide a credible plan for implementation within the expected timeframes -- any accountability application within 3 years and publicly reported within 6 years of initial endorsement. (Credible plan includes the specific program, purpose, intended audience, and timeline for implementing the measure within the specified timeframes. A plan for accountability applications addresses mechanisms for data aggregation and reporting.)

Within the next one to two years, performance results for this measure on a year to year basis will be available for public viewing on the ActiveHealth website. Calendar year data from our test population of over 20 million lives will be aggregated, reported, and displayed on our quality measure web page. While the measure specifications will be publicly available, the performance results of individuals or organizations will not be reported due to proprietary reasons.

3b. Improvement: H M L I

(Progress toward achieving the goal of high-quality, efficient healthcare for individuals or populations is demonstrated.⁶ If not in use for performance improvement at the time of initial endorsement, then a credible rationale describes how the performance results could be used to further the goal of high-quality, efficient healthcare for individuals or populations.)

3b.1. Provide data that demonstrate improvement in performance and/or health. (Not required for initial endorsement unless available.)

Include:

- Source of Data
- Geographic area and number and percentage of accountable entities and patients included
- Progress (trends in performance results, number and percentage of people receiving high-quality healthcare)

For this measure examining the number of people with chronic GERD and alarm symptoms who had an appropriate GI study, we identified a total of 733 patients from our entire national book of business, who fulfilled the criteria for the denominator from 2002 to 2008. We found a compliance rate of 19% over a 6 year period from 2002 to 2008. In our 2011 test data alone, we identified 392 people who met the denominator criteria, 260 people who met the numerator criteria, and a compliance rate of 66%.

Addendum 1/11/2012: After discussing with the NQF, we have separated the denominator into an overall general population and a high risk population. Due to the lag and timing of the NQF's decision, testing this measure with the NEW denominator is currently under way and will be available shortly. The testing and performance results currently in the submission form reflect the original measure denominator.

3b.2. If no improvement was demonstrated, what are the reasons? If not in use for performance improvement at the time of initial endorsement, provide a credible rationale that describes how the performance results could be used to further the goal of high-quality, efficient healthcare for individuals or populations:

N/A

3c. Unintended Consequences: H M L I

(The benefits of the performance measure in facilitating progress toward achieving high-quality, efficient healthcare for individuals or populations outweigh evidence of unintended negative consequences to individuals or populations)

3c.1. Were any unintended negative consequences to individuals or populations identified during testing; OR has evidence of unintended negative consequences to individuals or populations been reported since implementation? If so, identify the negative unintended consequences and describe how benefits outweigh them or actions taken to mitigate them.

None

Overall, to what extent was the criterion, *Usability*, met? H M L I

Provide rationale based on specific subcriteria:

4. FEASIBILITY

See Guidance for Definitions of Rating Scale: H=High; M=Moderate; L=Low; I=Insufficient; NA=Not Applicable

Extent to which the required data are readily available, retrievable without undue burden, and can be implemented for performance measurement. ([evaluation criteria](#))

4a. Data Generated as a Byproduct of Care Processes: H M L I

4a.1-2 How are the data elements needed to compute measure scores generated? (*Check all that apply*).
Data used in the measure are:

generated by and used by healthcare personnel during the provision of care, e.g., blood pressure, lab value, medical condition;
Coded by someone other than person obtaining original information (e.g., DRG, ICD-9 codes on claims)

4b. Electronic Sources: H M L I

4b.1 Are the data elements needed for the measure as specified available electronically (*Elements that are needed to compute measure scores are in defined, computer-readable fields*):
ALL data elements are in defined fields in a combination of electronic sources

4b.2 If ALL data elements are not from electronic sources, specify a credible, near-term path to electronic capture, OR provide a rationale for using other than electronic sources:
N/A

4d. Data Collection Strategy/Implementation: H M L I

4d.1 Describe what you have learned/modified as a result of testing and/or operational use of the measure regarding data collection, availability of data, missing data, timing and frequency of data collection, sampling, patient confidentiality, time and cost of data collection, other feasibility/implementation issues (e.g., fees for use of proprietary measures):
We use a combination of data sources to mitigate the risk of inaccuracies or errors. We recognize that generally, electronic data have inherent errors and inaccuracies related to incorrect coding, or missing data, which can result in less specificity in the definition of the denominator and /or the numerator. To minimize these errors and inaccuracies, we use clinically enriched data (laboratory results, medication lists) to augment the data. In addition, where possible, we corroborate the data. For example, to confirm a patient has diabetes, we not only confirm the presence of an ICD-9 code for diabetes from claims, we also substantiate this finding with the presence of diabetic medications. We have a mechanism in place to solicit feedback from providers via a feedback form, if they detect errors with the measure.

We do not anticipate significant unintended consequences from the implementation of this measure. Our measures are all developed from evidence-based literature or from clinical practice guidelines and are designed to encourage appropriate care of the patient.

4d.2 Describe any fees, licensing, or other requirements to use any aspect of the measure as specified (e.g., value/code set, risk model, programming code, algorithm):
None

Overall, to what extent was the criterion, *Feasibility*, met? H M L I

Provide rationale based on specific subcriteria:

OVERALL SUITABILITY FOR ENDORSEMENT

Does the measure meet all the NQF criteria for endorsement? Yes No

Rationale:

If the Committee votes No, STOP.

If the Committee votes Yes, the final recommendation is contingent on comparison to related and competing measures.

5. COMPARISON TO RELATED AND COMPETING MEASURES

See Guidance for Definitions of Rating Scale: H=High; M=Moderate; L=Low; I=Insufficient; NA=Not Applicable

If a measure meets the above criteria and there are endorsed or new related measures (either the same measure focus or the same target population) or competing measures (both the same measure focus and the same target population), the measures are compared to address harmonization and/or selection of the best measure before a final recommendation is made.

5.1 If there are related measures (*either same measure focus or target population*) or competing measures (*both the same measure focus and same target population*), list the NQF # and title of all related and/or competing measures:

5a. Harmonization

5a.1 If this measure has EITHER the same measure focus OR the same target population as NQF-endorsed measure(s): Are the measure specifications completely harmonized?

5a.2 If the measure specifications are not completely harmonized, identify the differences, rationale, and impact on interpretability and data collection burden:

5b. Competing Measure(s)

5b.1 If this measure has both the same measure focus and the same target population as NQF-endorsed measure(s): Describe why this measure is superior to competing measures (*e.g., a more valid or efficient way to measure quality*); OR provide a rationale for the additive value of endorsing an additional measure. (*Provide analyses when possible*):

ADDITIONAL INFORMATION

Workgroup/Expert Panel involved in measure development

Ad.1 Provide a list of sponsoring organizations and workgroup/panel members' names and organizations. Describe the members' role in measure development.

Bani Vir, MD: Medical Director, Clinical Research & Development, ActiveHealth Management, Inc.

Lindee Chin, MD: Medical Director, Clinical Research & Development, ActiveHealth Management, Inc.

George Wu, MD: Medical Director, Clinical Research & Development, ActiveHealth Management, Inc.

Rajesh Mehta, Director of Pharmacy Informatics, Clinical Research & Development, ActiveHealth Management, Inc.

Flora Chang, PharmD, Director of Pharmacy Informatics, Clinical Research & Development, ActiveHealth Management.

Judy Flood, Nurse Informatics QM Manager, Clinical Research & Development, ActiveHealth Management.

ActiveHealth Management measures are developed by our Quality Measures Management Committee, a division of the Clinical Research and Development Department, composed of physicians of varying specialties and pharmacists. This committee evaluates available clinical evidence guidelines, reliability of data from various sources, and the necessity to develop measures to help improve standards of healthcare.

NATIONAL QUALITY FORUM—Evidence (1c) Pilot Submission Form

Measure Title: [GERD - Upper Gastrointestinal Study in Patients with Alarm Symptoms](#)
Date of Submission: [12/7/2012](#)

- Respond to all questions with answers immediately following the question.
- Maximum of 6 pages (*6 pages includes questions/instructions in the form*); minimum font size 11 pt
- All information needed to demonstrate meeting the [evidence criterion \(1c\)](#) must be in this form. An appendix of *supplemental* materials may be submitted, but there is no guarantee it will be reviewed.
- See NQF [guidance on evaluating evidence](#). Contact NQF staff for examples, resources, or questions.

STRUCTURE-PROCESS-OUTCOME RELATIONSHIP

1c.1. This is a measure of:

Outcome

- Health outcome: [2T](#)
 Intermediate clinical outcome: [2T](#)
 Process: [Upper gastrointestinal study in those patients with chronic GERD with alarm symptoms in order to identify high risk individuals](#)
 Structure: [2T](#)
 Other: [2T](#)

HEALTH OUTCOME MEASURE *If not a health outcome, skip to 1c.3*

If the measure focus identified in 1c.1 is a health outcome, answer 1c.2 and 1c.2.1.

1c.2. Briefly state or diagram how the health outcome is related to at least one healthcare structure, process, intervention, or service.

1c.2.1. State the rationale supporting the relationship between the health outcome and at least one healthcare structure, process, intervention, or service.

Note: *For health outcome measures, no further information is required*

STRUCTURE, PROCESS, OR INTERMEDIATE OUTCOME MEASURE

If the measure focus identified in 1c.1 is a structure, process, or intermediate outcome answer all the following questions (except as indicated by skip pattern).

1c.3. Briefly state or diagram how the measure focus is related to desired health outcomes and proximity to desired health outcomes. *(Do not summarize the evidence here.)*

High risk patients with GERD who present with dysphagia or unintentional weight loss → investigate by endoscopy → early identification of complicated esophageal diseases (e.g., strictures, malignancies), evaluate the long-term success of existing GERD therapy, and for potential biopsy opportunities as part of a diagnostic differential.

1c.4. Is there a guideline recommendation supporting the measure focus identified in 1c.1.? Yes No
If no, skip to #1c.6

If yes, answer 1c.4.1-1c.5.

1c.4.1. Guideline citation (including date):

American Gastroenterological Association Institute Technical Review on the Management of Gastroesophageal Reflux Disease
Gastroenterology 2008;135:1392-1413

American Society for Gastrointestinal Endoscopy Guideline: Role of endoscopy in the management of GERD
Gastrointestinal Endoscopy 2007;66(2):219-224

1c.4.2. URL (if available online):

<http://gastro.ucsd.edu/fellowship/materials/Documents/GERD/AGA%20guidelines%20on%20management%5B1%5D.pdf>

<http://www.asge.org/WorkArea/showcontent.aspx?id=4182>

1c.4.3. Identify guideline number and/or page number:

Page 1397 for American Gastroenterological Association Institute Technical Review on the Management of Gastroesophageal Reflux Disease

Page

1c.4.4. Quote verbatim, the specific guideline recommendation:

American Gastroenterological Association Institute Technical Review on the Management of Gastroesophageal Reflux Disease

interval, 55%-79%), respectively. Individual alarm features with the best performance were weight loss, dysphagia, and epigastric mass on examination. Given those numbers, and viewing this as a screening test rather than a diagnostic test, it seems reasonable that patients being evaluated for GERD should be queried regarding dysphagia and weight loss and examined for an epigastric mass. If judged significant, any of these should be evaluated with endoscopy (USPSTF grade B, quality fair).

American Society for Gastrointestinal Endoscopy Guideline: Role of endoscopy in the management of GERD

The indications for EGD in patients with GERD are listed in Table 2. Endoscopy should also be considered

TABLE 2. Indications for endoscopy in patients with GERD

- GERD symptoms that are persistent or progressive despite appropriate medical therapy
- Dysphagia or odynophagia
- Involuntary weight loss > 5%
- Evidence of GI bleeding or anemia
- Finding of a mass, stricture, or ulcer on imaging studies
- Evaluation of patients with suspected extra-esophageal manifestations of GERD
- Screening for BE in selected patients (as clinically indicated)
- Persistent vomiting
- Evaluation of patients with recurrent symptoms after endoscopic or surgical antireflux procedures

- Endoscopy is recommended for patients who have symptoms suggesting complicated GERD or alarm symptoms (2A).

1c.4.5. Grade assigned to the recommendation with definition of the grade:

American Gastroenterological Association Institute Technical Review on the Management of Gastroesophageal Reflux Disease

Grade B, quality fair

American Society for Gastrointestinal Endoscopy Guideline: Role of endoscopy in the management of GERD

Grade 2A

1c.5. Did the guideline developer systematically review and grade the body of evidence for the specific guideline recommendation? Yes No If no, skip to #1c.6

If yes, answer 1c.5.1. (**Note:** Findings of the systematic review of the body of evidence for the guideline recommendation must be reported in 1c.8-1c.13.)

1c.5.1. Grade assigned to the body of evidence with definition of the grade:

Grade B, quality fair

1c.6. Is there another published systematic review of the body of evidence supporting the measure focus identified in 1c.1? (other than from the guideline cited above, e.g., Cochrane, AHRQ, USPSTF)
Yes No If no, skip to #1c.7

If yes, answer 1c.6.1-1c.6.3. (**Note:** Findings of the systematic review of the body of evidence must be reported in 1c.8-1c.13.)

1c.6.1. Citation (including date):

University of Michigan Health System. Gastroesophageal reflux disease (GERD). Ann Arbor (MI): University of Michigan Health System; 2012 May. 12

1c.6.2. URL (if available online):

<http://www.med.umich.edu/1info/fhp/practiceguides/gerd/gerd.12.pdf>

1c.6.3. Grade assigned to the body of evidence with definition of the grade:

1C

If a systematic review of the evidence was identified in either 1c.5 or 1c.6, skip to 1c.8

1c.7. If a systematic review of the body of evidence was not identified and reported in 1c.5 or 1c.6, did the measure developer perform a systematic review of the body of evidence supporting the measure focus identified in 1c.1? Yes No

If yes, answer 1c.7.1-1c.7.3. (Note: Findings of the measure developer's systematic review of the body of evidence must be reported in 1c.8-1c.13 and unpublished evidence review products such as evidence tables provided in an appendix.)

1c.7.1. Who conducted the measure developer's systematic review of the body of evidence?

1c.7.2. Grade assigned to the body of evidence with definition of the grade:

1c.7.3. Describe the process used for the systematic review:

If no systematic review of the body of evidence identified in 1c.5, 1c.6, or 1c.7, the evidence criterion can not be met.

FINDINGS FROM SYSTEMATIC REVIEW OF BODY OF THE EVIDENCE SUPPORTING THE MEASURE FOCUS

(Items 1c.8-1c.13 must be answered and should support the measure focus identified in 1c.1. If more than one systematic review was identified (1c.5, 1c.6, and 1c.7), provide a separate response for each.)

1c.8. What is the time period covered by the body of evidence? (provide the date range, e.g., 1990-2010). Date range: [1966-2012](#)

QUANTITY AND QUALITY OF BODY OF EVIDENCE

1c.9. How many and what type of study designs are included in the body of evidence? (e.g., 3 randomized controlled trials and 1 observational study)

1 meta-analysis, 20 prospective evaluations and 3 retrospective reviews.

1c.10. What is the overall quality of evidence across studies in the body of evidence? (discuss the certainty or confidence in the estimates of effect due to study factors such as design flaws, imprecision due to small numbers, indirectness of studies to the measure focus or target population)

The overall quality of evidence across studies in the body of evidence is fair. Most studies are prospective evaluations; however there are intrinsic heterogeneity in the study results due to the varying prevalence of upper GI malignancy, the alarm symptoms that were reviewed, and the complications reported. Second, there are varying thresholds for the determination of whether alarm features were present. Third, other factors and limitations for the studies include the different clinical settings and types of patients that were included in the various articles, the fact that alarm symptoms may not be a primary outcome for some of the studies, and limited number of studies that reviewed particular alarm symptoms. In this case would be dysphagia and weight loss, which have the highest likelihood ratio amongst all of the alarm symptoms. Last, some studies derived results from computational scoring systems and some from clinical evaluations, which contribute to the heterogeneity of the evidence. Despite these limitations, the American Gastroenterological Association still deem dysphagia and weight loss as acceptable screening criteria for patients with chronic GERD.

ESTIMATES OF BENEFIT AND CONSISTENCY ACROSS STUDIES IN BODY OF EVIDENCE

1c.11. What are the estimates of benefit—magnitude and direction of effect on outcome(s) across studies in the body of evidence? (e.g., ranges of percentages or odds ratios for improvement/decline across studies, results of meta-analysis, and statistical significance)

Upon review of the two specific alarm features, namely weight loss and dysphagia, the positive likelihood ratios range from 1.9 to 21.2 across the various studies reviewed in this analysis.

1c.12. What harms were studied and how do they affect the net benefit—benefits over harms?

Upper endoscopy is a low-risk procedure. Complications include perforation, cardiovascular events, and death, however the risks are very low, ranging from 1 in 1000 to 1 in 10000.

UPDATE TO THE SYSTEMATIC REVIEW(S) OF THE BODY OF EVIDENCE

1c.13. Are there new studies that have been conducted since the systematic review(s) of the body of evidence? Yes No If no, stop

If yes,

1c.13.1. For each new study provide: 1) citation, 2) description, 3) results, 4) impact on conclusions of systematic review.

The American College of Physicians has recently published best practice guidelines supporting our measure. This is the citation:

CLINICAL GUIDELINE

Upper Endoscopy for Gastroesophageal Reflux Disease: Best Practice Advice From the Clinical Guidelines Committee of the American College of Physicians

Nicholas J. Shaheen, MD, MPH; David S. Weinberg, MD, MSc; Thomas D. Denberg, MD, PhD; Roger Chou, MD; Amir Qaseem, MD, PhD, MHA; and Paul Shekelle, MD, PhD, for the Clinical Guidelines Committee of the American College of Physicians*

Background: Upper endoscopy is commonly used in the diagnosis and management of gastroesophageal reflux disease (GERD). Evidence demonstrates that it is indicated only in certain situations, and inappropriate use generates unnecessary costs and exposes patients to harms without improving outcomes.

Methods: The Clinical Guidelines Committee of the American College of Physicians reviewed evidence regarding the indications for, and yield of, upper endoscopy in the setting of GERD, and to highlight how clinicians can increase the delivery of high-value health care.

Best Practice Advice 1: Upper endoscopy is indicated in men and women with heartburn and alarm symptoms (dysphagia, bleeding, anemia, weight loss, and recurrent vomiting).

Best Practice Advice 2: Upper endoscopy is indicated in men and women with:

Typical GERD symptoms that persist despite a therapeutic trial of 4 to 8 weeks of twice-daily proton-pump inhibitor therapy.

Severe erosive esophagitis after a 2-month course of proton-pump inhibitor therapy to assess healing and rule out Barrett

esophagus. Recurrent endoscopy after this follow-up examination is not indicated in the absence of Barrett esophagus.

History of esophageal stricture who have recurrent symptoms of dysphagia.

Best Practice Advice 3: Upper endoscopy may be indicated:

In men older than 50 years with chronic GERD symptoms (symptoms for more than 5 years) and additional risk factors (nocturnal reflux symptoms, hiatal hernia, elevated body mass index, tobacco use, and intra-abdominal distribution of fat) to detect esophageal adenocarcinoma and Barrett esophagus.

For surveillance evaluation in men and women with a history of Barrett esophagus. In men and women with Barrett esophagus and no dysplasia, surveillance examinations should occur at intervals no more frequently than 3 to 5 years. More frequent intervals are indicated in patients with Barrett esophagus and dysplasia.

Ann Intern Med. 2012;157:808-816.

Measure Testing to Demonstrate Scientific Acceptability of Measure Properties

Measure Title: [GERD - Upper Gastrointestinal Study in Patients with Alarm Symptoms](#)

Date of Submission: [2T](#)

Type of Measure:

<input type="checkbox"/> Composite	<input type="checkbox"/> Outcome
<input type="checkbox"/> Cost/resource	<input checked="" type="checkbox"/> Process
<input type="checkbox"/> Efficiency	<input type="checkbox"/> Structure

This Word document template must be used to submit information for measure testing.

- For all measures, sections **1, 2a2, 2b2, 2b3, 2b5** must be completed
- For outcome or resource use measures, section **2b4** also must be completed
- If specified for multiple data sources (e.g., claims and medical records), section **2b6** also must be completed
- Respond to all questions with answers immediately following the question (*unless meet the skip criteria or those that are indicated as optional*).
- Maximum of 10 pages (*including questions/instructions; do not change margins or font size; contact project staff if need more pages*)
- All information on testing to demonstrate meeting the [criteria for scientific acceptability of measure properties \(2a,2b\)](#) must be in this form. An appendix for supplemental/materials may be submitted, but there is no guarantee it will be reviewed.

1. DATA/SAMPLE USED FOR ALL TESTING OF THIS MEASURE

Often the same data are used for all aspects of measure testing. In an effort to eliminate duplication, the first five questions apply to all measure testing. If there are differences by aspect of testing, (e.g., reliability vs. validity) be sure to indicate the specific differences in question 7.

1.1. What type of data was used for testing? (*Check all the sources of data identified in the measure specifications and data used for testing the measure. Testing must be provided for all the types of data specified and intended for measure implementation*)

Measure Specified to Use Data From:	Measure Tested with Data From:
<input type="checkbox"/> abstracted from paper record	<input type="checkbox"/> abstracted from paper record
<input type="checkbox"/> administrative claims	<input type="checkbox"/> administrative claims
<input type="checkbox"/> clinical database/registry	<input type="checkbox"/> clinical database/registry
<input type="checkbox"/> abstracted from electronic health record	<input type="checkbox"/> abstracted from electronic health record
<input type="checkbox"/> eMeasure implemented in electronic health record	<input type="checkbox"/> eMeasure implemented in electronic health record
<input checked="" type="checkbox"/> other: We ingest and store data in a centralized warehouse from multiple sources, e. g., administrative claims (including procedure, diagnosis, pharmacy, and lab), electronic clinical data, patient data from electronic personal health records and feedback, provider survey.	<input checked="" type="checkbox"/> other: The individual sources for this measure are not tested separately. We ingest and store data in a centralized warehouse from multiple sources, e. g., administrative claims (including procedure, diagnosis, pharmacy, and lab), electronic clinical data, patient data from electronic personal health records and feedback, provider survey. All data sources are tested simultaneously

1.2. If used an existing dataset, identify the specific dataset (*the dataset used for testing must be consistent with the measure specifications for target population and healthcare entities being measured; e.g., Medicare Part A claims, Medicaid claims, other commercial insurance, nursing home MDS, home health OASIS, clinical registry*).

All the data for the measures are obtained from electronic sources. We ingest administrative claims data, pharmacy-based management systems, laboratory systems, personal health records, health risk assessments, and electronic health records. In addition, we use data from care management systems. All data feeds are electronic and do not require manual medical chart abstraction.

We have over 20 million patient records in our database, consisting of data from provider organizations, hospital systems, healthcare plans, and Medicare and Medicaid. The mean age of the population is 37, and 51% of the population is female.

1.3. What are the dates of the data used in testing? **2T**

Data abstraction was performed in 2012.

1.4. What levels of analysis were tested? (*testing must be provided for all the levels specified and intended for measure implementation, e.g., individual clinician, hospital, health plan*)

- individual clinician group/practice hospital/facility/agency health plan
- other: Population level/National

1.5. How many and which measured entities were included in the testing and analysis (by level of analysis and data source)? (*identify the number and descriptive characteristics of measured entities included in the analysis (e.g., size, location, type); if a sample was used, describe how entities were selected for inclusion in the sample*)

We tested this measure on data from 2,459,974 patients from a major national commercial health plan, a large national employer based in Texas and Oklahoma, and a state health plan in the Appalachian region of the Southern US, which represent a subset of our total population. The total test population of the commercial health plan was 2,104,194. The total test population of the national employer was 161,873. The total test population of the state health plan was 193,097. The average age of the overall test population was 35 years and 52 percent were female. Using our complex algorithms, we were able to identify a subset of the test population who met the criteria for the denominator (e.g., people with chronic GERD and alarm symptoms), numerator (those who had an appropriate GI evaluation done), and exclusions (see algorithm for details).

1.6. How many and which patients were included in the testing and analysis (by level of analysis and data source)? (*identify the number and descriptive characteristics of patients included in the analysis*)

(e.g., age, sex, race, diagnosis); if a sample was used, describe how patients were selected for inclusion in the sample)

We tested this measure on data from 2,459,974 patients from a major national health plan, a large national employer, and a state health plan, which represent a subset of our total population. The total test population of the commercial health plan was 2,104,194. The total test population of the national employer was 161,873. The total test population of the state health plan was 193,097. In our past experience, this particular subset represents, both demographically and clinically, an accurate cross-section of our overall population of over 20 million lives. Our test population is selected randomly. The average age of the population was 35 years and 52 percent were female. The race of the individuals in our test population was not specified. The test population could have any number of diagnoses. Our rules algorithm determined if an individual met the denominator, numerator, and exclusion criteria.

1.7. If there are differences in the data or sample used for different aspects of testing (e.g., reliability, validity, exclusions, risk adjustment), identify how the data or sample are different for each aspect of testing reported below.

N/A

After discussing with the NQF, we have separated the denominator in to an overall general population and a high risk population. Due to the lag and timing of the NQF's decision, testing this measure with the NEW denominator is currently under way. The testing results currently in the submission form reflect the original measure denominator.

2a2. RELIABILITY TESTING

Note: If accuracy/correctness (validity) of data elements was empirically tested, separate reliability testing of data elements is not required – report validity of data elements in 2b2

2a2.1. What level of reliability testing was conducted? (may be one or both levels)

- Critical data elements used in the measure (e.g., inter-abstractor reliability)
- Performance measure score (e.g., signal-to-noise)

2a2.2. For each level checked above, describe the method of reliability testing and what it tests (describe the steps—do not just name a method; what type of error does it test; what statistical analysis was used)

All of our quality measures are electronic and all of the data used to support the measures are electronic. In addition, we receive the data by electronic feeds. We have internal processes to ensure that we receive valid codes and where appropriate the associated values. Our analytic process includes testing a new rule or algorithm on our test database, so that we can be sure of the reliability of the codes.

At the end of the test, we randomly select patients who are either in the numerator, or in the denominator but not the numerator, and review their individual electronic data to ensure that they met the requirements of the rule. As a part of our reliability testing, we check to ensure that we have found the correct people in the denominator or the numerator, across multiple rules with similar definitions. To ensure accuracy, we check a subset of the people who were not in the numerator to ensure that we were accurate in not counting them in the

numerator. If we find errors at any stage of the reliability testing, e.g., similar denominators that had significant differences in counts, different compliance rates for similar populations; we update the rules and retest.

2a2.3. For each level checked above, what were the statistical results from reliability testing? (e.g., percent agreement and kappa for the critical data elements; distribution of reliability statistics from a signal-to-noise analysis and association with case volume)

The average proportion of members that had GERD with alarm symptoms and the appropriate upper GI study across the 3 populations that we tested was 70.3%. The Standard Deviation was 15.5%. The signal to noise ratio is 5.

1. The proportion of patients within each client group with diagnosis/procedure claims in the last 365 days was: median 53% (IQR = 10%).
2. The proportion of patients within each client group with at least 1 prescription in the last 365 days was: median 81% (IQR = 8%).
3. The proportion of patients within each client group with lab results in the last 365 days was: median 46% (IQR = 12%).

2a2.4 What is your interpretation of the results in terms of demonstrating reliability? (i.e., what do the results mean and what are the norms for the test conducted?)

An SNR of 5 or greater indicates certainty that the data sources are reliable.

The IQR of the proportion of patients with diagnosis/procedure, pharmacy and lab results were 9.79%, 10.69% and 15.71%, respectively, for a large national employer ($n=12,479,154$). For our test population ($n=279,666$), the IQRs of the proportion of patients with diagnosis/procedure, pharmacy and lab results were 10%, 8% and 12%, respectively.

The IQR values in our test population were low and similar to that of a large national employer. These numbers suggest that the volume of data received on a regular basis demonstrates consistency and reliability of the data we receive and use in this measure.

2b2. VALIDITY TESTING

2b2.1. What level of validity testing was conducted? (may be one or both levels)

- Critical data elements
- Performance measure score
 - Empirical validity testing
 - Systematic assessment of face validity of performance measure score as an indicator of quality

or resource use (*i.e., is an accurate reflection of performance quality or resource use and can distinguish performance*)

2b2.2. For each level checked above, describe the method of validity testing and what it tests
(describe the steps—do not just name a method; what was tested, e.g., accuracy of data elements compared to authoritative source, relationship to another measure as expected; what statistical analysis was used)

All of our quality measures are electronic and all the data used to support the measures are electronic. In addition, we receive the data by electronic feeds. We have internal processes to ensure that we receive valid codes and where appropriate the associated values. The methodology for the development and testing of this measure included (1) extensive literature review by board-certified physicians, (2) creation of computerized algorithms by clinicians, (3) technology testing using data from different populations, (4) analysis of results with manual case review to ensure accuracy of the alert, (5) periodic review of provider and patient feedback.

Our analytic process includes testing a new rule or algorithm on the standard data set so that we can be sure of the reliability of the code. At the end of the test, we randomly select patients who are either in the numerator, or in the denominator but not the numerator, to ensure that they met the requirements of the rule. As a part of our validity testing, we check to ensure we have found the correct people in the denominator or the numerator. To ensure accuracy, we manually review the electronic data of a subset of the people who were not in the numerator to ensure that we were accurate in not counting them in the numerator. If we find errors at any stage, then we update the rules and retest.

2b2.3. What were the statistical results from validity testing? (e.g., correlation; t-test, ANOVA)

The algorithms and code sets used for the measures are all electronic. Once we test the rules, the results are reviewed by our clinical research and development committee, composed of physicians of varying specialties, pharmacists, and nurses.

We randomly select up to 10% of patients who are either in the numerator, or in the denominator but not the numerator, to ensure that they met the requirements of the rule. As a part of our validity testing, we check to ensure we have found the correct people in the denominator or the numerator. To ensure accuracy, we manually review the electronic data of a subset of the people who were not in the numerator to ensure that we were accurate in not counting them in the numerator. If we find errors at any stage, then we update the rules and retest. Of the 392 people who met the inclusion criteria, 39 people were randomly selected for validity testing. After reviewing the patient level data, 100% of those randomly selected were found to have accurately met the requirement of the rule algorithm.

2b2.4. What is your interpretation of the results in terms of demonstrating validity? (i.e., what do the results mean and what are the norms for the test conducted?)

During validity testing of this measure, we found that the appropriate patients were included in numerator and denominator, and accurately excluded.

2b3. EXCLUSIONS ANALYSIS

NA no exclusions — **skip to #2b5**

2b3.1. Describe the method of testing exclusions and what it tests (*describe the steps—do not just name a method; what was tested, e.g., whether exclusions affect overall performance scores; what statistical analysis was used*)

We do not test exclusions separately from our other data elements. Exclusion and inclusion criteria for each measure is based on a systematic review of current literature, as well the expert opinion of our clinical team—a panel of over 30 physicians, nurses, and pharmacists. Literature findings are presented to a group of clinicians on a regular basis, and after review of said literature, a consensus is reached on the algorithms of our numerator, denominator, and exclusions. We then test our algorithms on a subset of clinical and administrative data, using data from a large national health plan, large national employer, and state health plan. Our analytic process includes testing a new rule or algorithm on the standard data set so that we can be sure of the reliability of the code sets. At the end of the test, we randomly select patients who are either in the numerator, or in the denominator but not the numerator, to ensure that they met the requirements of the rule. As a part of our validity testing, we check to ensure we have found the correct people in the denominator or the numerator. To ensure accuracy, we manually review the electronic data of a subset of the people who were not in the numerator to ensure that we were accurate in not counting them in the numerator. If we find errors at any stage, then we update the rules and retest.

For this particular measure, our clinician team reached a consensus to exclude those patients with possible causes of the alarm symptoms described, **other than GERD**. Reasons for such symptoms include weight loss surgery, gastrectomy, esophageal varices, and metastatic cancers.

2b3.2. What were the statistical results from testing exclusions? (*include overall number and percentage of individuals excluded, frequency distribution of exclusions across measured entities, and impact on performance measure scores*)

Out of a total test population of 2,459,974 patients, 1170 fell into the denominator. 778 (66%) of these individuals were excluded, based on the exclusion criteria in our algorithm. The excluded populations were 59, 73, and 646, for the large national employer, state health plan, and large national insurance payor, in our test data, respectively.

2b3.3. What is your interpretation of the results in terms of demonstrating that exclusions are needed to prevent unfair distortion of performance results? (*i.e., the value outweighs the burden of increased data collection and analysis. Note: If patient preference is an exclusion, the measure must be specified so that the effect on the performance score is transparent, e.g., scores with and without exclusion*)

It is important to identify the appropriate population that requires further investigation and/or studies for chronic GERD symptoms with alarm symptoms, in order to prevent over screening and the potential harmful outcomes associated with over screening. Our exclusion criteria and rules algorithm allow for specificity when identifying those patients that require further evaluation and prevents over burdening providers and healthcare systems with overutilization of health care services.

2b5. IDENTIFICATION OF STATISTICALLY SIGNIFICANT & MEANINGFUL DIFFERENCES IN PERFORMANCE

2b5.1. Describe the method for determining if statistically significant and clinically/practically meaningful differences in performance measure scores among the measured entities can be identified (describe the steps—do not just name a method; what statistical analysis was used)

We tested this measure on data from 2,459,974 patients from a major national health plan, a large national employer, and a state health plan, which represent a subset of our total population. We used the average performance measurement scores and 95% confidence intervals to determine statistically significant meaningful differences in the performance measure scores among the test population.

2b5.2. What were the statistical results from testing the ability to identify differences in performance measure scores across measured entities? (at a minimum, the distribution of performance measure scores for the measured entities by decile/quartile, mean, std dev; preferably also number and percentage statistically different from mean or some benchmark, different from expected, etc.)

The statistical test results in performance measure scores for each of the three test populations were, as follows:

1. National Health Plan: 86% (lower and upper 95% CI: 73-99%)
2. State Health Plan: 70% (lower and upper 95% CI: 64-76%)
3. Large National Employer: 55% (lower and upper 95% CI: 46-64%)

2b5.3. What is your interpretation of the results in terms of demonstrating the ability to identify statistically significant and clinically/practically meaningful differences in performance across measured entities? (i.e., what do the results mean and what are the norms for the test conducted?)

The test results of the measure illustrate large differences in performance across the 3 populations. We conclude that our test results will have the ability to identify statistically significant and clinically/practically meaningful differences in performance across different entities.

If not an intermediate or health outcome or resource use measure, this section can be deleted
