Review and Discuss Key Informant Interviews

Objective of Today's Meeting

1

- Review and discuss themes resulting from key informant interviews to obtain additional Committee feedback

Key Informant Interview Process

- NQF conducted key informant interviews with four state medical directors in March 2019

- Feedback was solicited on strategic topics discussed during the MAC Scorecard in-person meeting

- Specifically, NQF and CMCS sought further input on:
  - *The MAC Scorecard composition, and*
  - *The relationship between the Core Sets and the MAC Scorecard*

Key Informant Interview Themes

Four themes arose during the interviews:

- Medicaid and CHIP populations impacted by MAC Scorecard measures

- Considerations/recommendations for MAC Scorecard composition

- Accountability

- Practical/technical considerations

Scorecard Composition Themes from the Key Informant Interviews

- The minimum 25-state reporting threshold criterion for MAC Scorecard measure selection limits states' opportunity to address critical measures

- Despite future mandated reporting, key informants recommended CMCS not adopt all Child Core Set and behavioral health measures to the MAC Scorecard

- Consistency is key; therefore, MAC Scorecard churn (e.g., frequent additions/removals to/from the Scorecard) is not advised

- Pillar 1 of the MAC Scorecard should not exceed 20 measures

Discussion Questions

- What are some criteria and/or considerations for changing the composition of the Scorecard based on priorities, epidemics, critical issues, etc.?

- Which gap areas should CMCS prioritize when selecting measures for future iterations of the MAC Scorecard?

- How should CMCS address variability among Medicaid populations as well as variances in outcomes when considering MAC Scorecard composition?

- How quickly should the MAC Scorecard composition change in relation to relative timeliness of data collection/analysis, differing data sources, and adoption of the MAC Scorecard?
