Driving measurable health  
improvements together

## Memo

**March 30, 2020**

**To:** NQF members

**From:** NQF staff

**Re:** Prevention and Population Health Fall 2019 Report

### Background

This report reflects the review of measures in the Prevention and Population Health project. Measures included in this portfolio assess the promotion of healthy behaviors, in addition to community-level indicators of health, oral health, and primary prevention strategies.

The 25-person Prevention and Population Health Standing Committee reviewed three measures. Two were recommended for endorsement, and the Committee did not reach consensus for one of the measures.

### Recommended Measures:

- 0658 Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients (American Gastroenterological Association)
- 3484 Prenatal Immunization Status (NCQA)

### Consensus Not Reached:

- 3483 Adult Immunization Status (NCQA)

**The Committee requests comments on all measures, but specifically for the measures where consensus was not reached.**

### NQF Member and Public Commenting

NQF members and the public are encouraged to provide comments via the online commenting tool on the draft report as a whole, or on the specific measures evaluated by the Prevention and Population Health Standing Committee.

**Please note that commenting concludes on May 28, 2020 at 6:00 pm ET—no exceptions.**
